Tim:

I'll make an effort to monitor the 146.74 Big Rapids repeater Tuesday evening, should you want to give it a try from your field station.

We do have a weekly net at 9 p.m. on that frequency if you would want to check in.

4219. GET READY FOR THE UPCOMING ARRL JUNE VHF QSO PARTY

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-05-30 19:49:17 UTC
From: Mark Thompson
Topic: 4219 Message: 4219

GET READY FOR THE UPCOMING ARRL JUNE VHF QSO PARTY

June is just about here, and according to ARRL Contest Branch Manager Sean Kutzko, KX9X, that means the VHF bands are starting to get some steam. "If you've never experienced the fun of VHF+ operating, the ARRL June VHF QSO Party is a great place to start. With many HF radios now offering at least 6 meter SSB/CW capabilities -- and some offering 2 meters and 70 cm as well -- any amateur with a Technician class license or higher can experience long-haul communication on the VHF bands," he said.

Known as the "Magic Band," 6 meters can be quiet for days at a time, and then suddenly explode with signals when the E layer of the ionosphere cooperates. There's no guaranteed way to predict when 6 meters opens, which is why the propagation mode is called "Sporadic-E." When 6 meters opens, contacts several hundred miles away can be made with relatively modest equipment; 50 W and a simple dipole antenna can do wonders during a good opening.

When operating on VHF, Kutzko said that your Maidenhead grid square is the common geographical information exchanged. For complete information on grid squares and how to tell what grid square you are in, visit the ARRL's web site <http://www.arrl.org/locate/gridinfo.html>.

Kutzko advises that there are a few things to know about operating on 6 meters: In the US and Canada, there is a "calling frequency" on 50.125 MHz USB. Many stations monitor this frequency to listen for band openings. Stations can call CQ on the calling frequency, and if somebody answers, the stations will find a new frequency on which to conduct their QSO. It is considered poor etiquette to monopolize the calling frequency for QSOs.

Most SSB activity will take place between 50.125 MHz and 50.250 MHz. If conditions are exceptional, Kutzko said you may hear signals above 50.250: "CW signals can be found from 50.100 MHz to 50.080 or so. The frequencies between 50.100 and 50.125 MHz are a 'DX Window,' meaning it is reserved for QSOs between W/VE and DX stations. Please do not make stateside-to-stateside QSOs in the DX Window."

Kutzko said that getting on 6 meters is easy: "A dipole for 6 meters is only 9 feet, 4 inches long and is an easy construction project. Try to get the dipole in the air as high as possible, but even 15 feet off the ground will make some QSOs. If you have an antenna tuner that can handle 6 meters, you can try loading up another of your antennas on 6 meters with reasonable success."

Because VHF+ antennas are relatively small, Kutzko said that many amateurs operate from portable locations, such as a hilltop or a campground. Others operate the contest as a "rover," operating from their car or truck while transmitting from multiple grid squares over the contest period. "Tracking rovers during the contest is almost as much fun as the contest itself," he said.

The ARRL June VHF QSO Party runs from 1800 UTC Saturday, June 14-0300 UTC Monday, June 16. Be sure to use those extra bands on your transceiver and get in on the fun you've been missing on 6 meters and up! For more information on this contest, please be sure to check out the Contest Rules <http://www.arrl.org/contests/rules/2008/june-vhf.html>.

Typically, in most states (including Michigan), Disaster Service Agencies are based on the county, and only rarely does an in-county drill ask for help from surrounding counties.

This assumes that if one county has a disaster, it's likely that adjoining counties will be tied up with their own concerns.

In practice, if something "big" hits an isolated area of a state, agreements similar to fire and police departments' mutual aid pacts are invoked, and amateurs from other parts of the state or country are brought in. This was most evident on a national scale in the aftermath of Hurricane Katrina, where hams from all over the country were solicited to help in the Gulf Coast areas of Louisiana, Mississippi, etc., and were put to use for several months after the event. On a smaller scale, in SW Ohio during the floods of the Ohio River and its tributaries, hams from Dayton and elsewhere were solicited to help the Queen City Emergency Net and Cincinnati Red Cross in flood damage assessment. Much earlier, in the widespread tornadoes which hit a swath from Cincinnati to Xenia, Ohio in 1974, hams from Columbus, Cincinnati, Dayton, and elsewhere converged on Xenia for damage assessment and other communications needs because many/most of the hams in Xenia and immediate surroundings were directly affected.

I've only been in Western Michigan since fall, 2005, so don't have much history on natural disasters here, so I'm not aware of any large scale events which required mutual aid from one part of the state to another. Olde tymers in the area probably could recall some events similar to what happened in SW Ohio.

Hi,Richards:

Sorry I didn't catch this message earlier.

Don't be embarrassed about programming a new radio. I need to refer to the user's manual every time I want to set something different in my radio. The programming of many modern day rigs is obvious to only those who manufacture them. :)

I gather than you want to help with VHF FM contacts for W8T? I'm not sure of which repeaters can be accessed from downtown Rockford near the river, but the local repeaters are:

147.26 + offset, 94.8 Hz sub audible tone (Downtown Grand Rapids)
147.16 + offset, 94.8 Hz Sub audible tone (Grand Rapids)
146.88 - Offset, 141.3 Hz sub audible tone (Cedar Springs)
145.41 - Offset, 94.8 Hz sub audible tone (Grand Rapids)
145.27 - Offset, 94.8 Hz sub audible tone (Lowell)
145.23 - Offset, 94.8 Hz sub audible tone (Grand Rapids)
145.11 - Offset, 94.8 Hz sub audible tone (Grand Rapids)

If I missed any in this area, would someone else please straighten me out.

I'll take my mobile down to the site and see which repeaters I can access with 5W, to give you an idea of what you might expect from a hand held radio. If we can hit 145.27 or 147.16 MHz they are connected to a linked repeater system, so we should be able to contact people from throughout a large area of Michigan.

As I said earlier, plans are to activate W8T from downtown Rockford next to the White Pine trail on Saturday, June 7, starting about noon and running to about 6 or 7 p.m. Your help most any time during that period will be most helpful. I'll be posting some info early next week. I've been overloaded with other items this week.

Hello, we still are need six operators for Saturday and Sunday for this weekends Bike MS 2008 Bike Tour.

If you can make it tomorrow, please show up the Holland High School by 7:00am, if you can make it on Sunday, please call me on my cell 616-218-1325, or email me and I will let you know where to meet up with your specific Team.

We will be using the Holland Amateur Club's repeater 147.06 (+.60)pl 94.8 both days. If see one of the members of the Club, please thank them for making the repeater available for this event each year, it's a great community service.

Best regards,
Steve N8UJD

Thanks for the good news on the 94 repeater situation, Al.

Thanks also for helping spread the word about the Michigander in mid July.

More to come as the time gets closer.

For all users of the 94 repeater. Please keep these dates in mind and keep an ear open. As the new antenna and feedline is still being "beta" tested, I would appreciate feedback on how it performs.

Hi Tom

You are most welcome to use the repeater for your event. All MAARC repeaters are open repeaters. You will also find coverage has improved dramatically with the new antenna and feed line now at 370 foot height. Our 444.550 UHF machine is now back in service and provides 5- 10 mile hand held coverage, feel free to use this as needed when you are in the local area. . Both machines are 94.8 PL. Good Luck.

Subject: repeater usage authorization for Michigander Bike Tour requested

May 31, 2008

Hello, Al.

My name is Tom Behler, and my amateur call is KB8TYJ.

I am writing on behalf of the Michigander Bike Tour, which will be coming through your area during the week of July 12--18, 2008.

I will be serving as main net control station for the bike tour, as it traverses the entire planned route from the Walker/Muskegon area to Traverse City.

During the week-end of April 26--27, I and several other fellow bike tour hams did a repeater coverage test run through the designated route, and found the 146.940 repeater to be extremely useful as a possible communications tool.

Therefore, we are wondering if you could grant us permission to use the 146.940 repeater as a back-up net repeater when we are in your area?

Even though we would like to use your repeater for back-up net communications, we will always respect the fact that it is your repeater, and assure you that your usage needs will be given precedence at all times.

Both I, and the organizers of the Michigander Bike Tour, would appreciate a response to this inquiry at your earliest convenience.

In addition, if you have any questions, please do not hesitate to ask.

If you want more information on the Michigander Bike Tour itself, go to:

www.michigantrails.org

Thanks much, and 73 from Tom Behler: KB8TYJ, Mecosta County EC/RO and

Michigander main NCS station

4229. FRS Radios and Repeaters

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-03 03:26:54 UTC
From: Laryn Lohman
Topic: 4229 Message: 4229

Hi Ed KF8EV. I don't have the definitive info on whether a store and forward repeater is legal or illegal on FRS. From what I've read, there are many opinions. I have not seen any prohibition in the rules (Part 95).

I post this publicly hoping that someone else may have more info on this. Anyone???

Laryn K8TVZ

4230. Joe Bells Mother

From: Jeff's Lists
Topic: 4230 Message: 4230

All:

I regret to share with you that Joe Bell□s (WD8USA) mother passed away
Monday June 2nd.

Please remember Joe, Kathy and the kids in your thoughts and your prayers
during
This time of their loss and grief.

Joe's Email Address is:
wd8usa@... <mailto:wd8usa%40aol.com>

I am providing the text from the obituary below:

Sally Grace Young Bell

Born: September 01, 1921

Died: June 02, 2008

Services: The service for Sally will be Thursday at 2:00 p.m. at the
Pederson Funeral Home in Rockford, MI, with Pastor Richard Riley of the
Rockford United Methodist Church officiating.

Visitation: Friends may meet with Sally□s family from 3 to 5 p.m. and 7 to 9
p.m. Wednesday at the funeral home.

Sally Grace Bell, age 86, passed away on Monday, June 2, 2008 at Clark
Retirement Community, her second home after being a long-time Rockford, MI
resident. Sally Grace was born in Canton, Madison County, Mississippi on
September 1, 1921, daughter of Stanley Gaylord Young and Hattie Emma Denson.
She grew up on the family farm four miles from town before the era of
tractors and technology. In those depression era years, a full bale of
cotton yield meant prosperity and the ability to afford the essentials
including shoes and a new dress for school plus a few extra quarters set
aside for emergencies. Sally□s life was enriched by many close relationships
from her extended family during her youth; she had continued to maintain
connection with many cousins through the years by frequent correspondence.
Sally graduated from Canton High School in 1940, earning a special
recognition award for never having missed a single day of school during her
school career. She celebrated her fiftieth high school reunion in 1990, to
the delight of her family and alumni friends. Miss Young came to Michigan in
1940 where she began work in the mailroom at Wolverine Shoe Company in
Rockford, Michigan, later becoming a bookkeeper in the sales division. After
her retirement in 1953, she continued to manage the books at several local
businesses. Robert G. Bell and Sally Grace Young were united in marriage on
February 11, 1950, at the First United Methodist Church in Rockford. Mr.

Bell was a manufacturer□s representative, in partnership with Bell & Schrotenboer at the time of retirement. During her children□s youth, she was a 4-H leader, band parent, and interested in her children□s school careers. A 50-year member of the Rockford United Methodist Church, she had served as past board member and enjoyed membership in several women□s circles. Sally loved her flower garden, arts and crafts, and treasured her southern heritage and tradition. She loved to travel with her husband and had visited many foreign countries, as well as many points of interest in the USA. Bob and Sally wintered in Pompano Beach, FL where they enjoyed participation as owners in the harness racing business in which their favorite □Mainstreet□ was a special joy. After her husband□s death, Sally pursued her dream of dancing by taking ballroom lessons, doing a mean tango at age 72. Sally Grace Young Bell was predeceased by her husband, Robert on September 10, 1992, and her parents, Stanley G. Young and Hattie Emma (Denson) Young, and very special friends, Joseph Bonello, and Ray Wayno. Survivors include her son, Joseph and Kathleen (Ure) Bell; daughter and her husband, Charles and Roberta Bell Wolfe; four grandchildren, Kathryn E. Wolfe and her fiancé, Aaron Norris, Robert V. Wolfe, Elizabeth G. Bell, and Jennifer A. Bell; sister, Mrs. Emma Jean Bowman; and nieces, nephews, and cousins. Interment will be in Cannonsburg Cemetery.

4236. Last Minute Info: Saturday's FoxHunt at the IRA Hudsonville Swap

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-04 00:18:07 UTC
From: mike_w8der
Topic: 4236 Message: 4236

Be sure to stay around after the IRA Hamfest in Hudsonville Saturday for the "My Money's All Gone" Foxhunt put on by the Grand Rapids Amateur Radio Assoc.

Meet the "Official Starter" Jim Leys, KD8CAN, in the Park Avenue Parking lot by the IRA ticket booth by 12:45 PM to record your odometer reading and to get the latest instructions. The Fox (the team of Tom and Sheila Bosscher K8TB/K8AJ) will begin transmitting their taunts exactly at 1:00 PM.

See the GRARA website http://www.w8dc.org/FoxHuntMain.htm for rules and all kinds of useful links to foxhunting info.

In the words of Jack Kunnen, GRARA President.... "The hunt should be a good one, even if you don't have fancy equipment come on out we can match up and car pool as needed. Fox hunts are a good time, putting some of our Ham skills to a test. Everyone is welcome."

What do you win, you ask? Just the unending respect of your peers and the first option to be the fox at the next GRARA fox hunt.

In addition, you will have the extreme pride in knowing that you brought the current championship back to your Grand Rapids Club. The current reigning champions are Tom and Sheila Bosscher from the Holland Amateur Radio Club. (The HARC couldn't win twice in a row..... could they?)

If you get a chance, sign-up on the W8DC website so we know to expect you. This is a beginner level fox hunt. No computer aided or doppler tracking systems are allowed.

Come on out and enjoy ham radio! Saturday at 12:45 at the IRA Hamfest.

From: Hank Greeb
Topic: 4238 Message: 4238

The special events call W8T will be activated during the National Trails day from a gazebo in Peppler Park, downtown Rockford, Michigan. The operation will be between about 1600Z and 2359Z on June 7. The call has been reserved, and three operators will share the duty on 80 thru 20 metres, CW and SSB, plus several 2 metre FM repeaters in the area. See http://www.greeb.net/w8tinfo/ for details of the proposed operating frequencies and times. A pictorial QSL card will be available - send #10 envelope or larger with SASE to N8XX QTHR.

Another special events station will be N8T, will be activated by the Lake Effect Amateur Radio Club of Marquette, Michigan in the Upper Peninsula. Details of this operation can be found at http://www.lakeeffectarc.info/N8T%2DTrails2008/N8TBandOpsPlan.htm

We hope to see as many operators from West Michigan on the bands as possible.

From: Linda
Topic: 4239 Message: 4239

Hello, All:

Check it out, three vessels from Muskegon will be represented this coming weekend for Museum Ships on the Air, all day Saturday and Sunday. Members from the Muskegon Area Amateur Radio Council will operate from LST-393 (N9AUY), USCGC McLane (W8ZHO), and the USS Silversides (WB8IXV). Look for us! There are 74 ships in the event this year, it promises to be a fun time.

Here's your link for more information:
http://users.tellurian.com/freddie/nj2bb/ship-event.html

Good sailing and 73,
Linda, AB8QH

Hi Hank - you mentioned the possibility of my bringing my HF rig...

but I do not know what I would use as an antenna. I have a wide
range internal tuner (runs about 8:1 which is more than the usual
3:1 in many rigs) and I have a 20 meter dipole I made but do not have
up...

Any ideas on antennas for HF operation if I bring my rig?

ALSO, SORRY I missed meeting you in person last weekend on the
MS 100 route - I was "Staff 2" on the project. Our support
vehicle arrived back after the last rider was in.

Tonight the program at the club house general meeting the program will be Field Day hosted by Al Pepping our field day chairman.

In addition I will be bringing out a portion of the power plant that will be used. It will be 3KW battery operated inverters with modified sign wave output. I have operated a Elecraft K2, Collins KWM-2 and Heathkit SB-102 and have found NO noise generated on HF bands 80-10 With the filters turned off on the rigs. Feel free to bring your radio and plug it in and try it out.

4247. Laryn, K8TVZ and Bob, KD8HNF narrowly beat GRARA's Pres in Fox Hunt

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-09 00:08:32 UTC
From: mike_w8der
Topic: 4247 Message: 4247

Fox"ees" Tom and Sheila Bosscher (K8TB/k8AJ) kept everyone laughing with their taunts as searchers combed western Ottawa County in the GRARA "My Money's All Gone Fox Hunt" Saturday afternoon. Tom and Sheila had quietly slipped out of the IRA Hamfest in Hudsonville and were sitting under a shade tree in Heritage Park on Canel Avenue in Grandville. For a while it seemed like nobody would find them. Hints like "I see a lot of green", and "this ice cream tastes good" didn't seem to help a lot.

Laryn Lohman, K8TVZ, and his sidekick Bob Robinson, KD8HNF, narrowly beat the GRARA team of President Jack Kunnen, AB8ND, Tom Hansen, N8DGD, and Louie White, N8ZVB.

Both teams took over an hour to find the Fox with the winning team traveling 8.9 miles and the second team traveling 10 miles. The team traveling the least distance within the two hour contest time becomes the winner who earns a nifty certificate "suitable for framing" and the first shot at becoming the fox for next month's hunt.

All teams found Heritage Park within the two hour limit with "straggler" Mike Hill, W8DER, stumbling in with 8 minutes to spare and the team of Jim Leys, KD8CAN, and Kirk Wyatt, KC8TTT, slipping in with three minutes to spare. Admittedly the hints got a little better at the end. The final hint went something like "fill in the blank -- I would go to a dentist for a root _____."

Everyone who met at the Burger King on 44th and Kennowa for a drink agreed that this transmitter hunt will be hard to beat.

BUT WE ARE GOING TO TRY IN JULY. STAY TUNED......

Clubs represented included HARC, GRARA, Lowell and GVSU.

Our thanks go out to Tom and Sheila for showing us how much fun a transmitter hunt can be. Also our thanks to the IRA folks for letting us start our hunt from their hamfest.

For information on the next hunt, rules and equipment tips, watch the GRARA web site, http://www.W8DC.Org under "Fox Hunts 2008".

4248. W8T - National Trails day - HF a bust

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-09 01:05:45 UTC
From: Hank Greeb
Topic: 4248 Message: 4248

Randy, AG8A, and I activated W8T for the National Trails Day at just after 1600Z. today (June 7). We operated next to the Fred Meijer White Pine Trail in downtown Rockford, Michigan, near Peppler Park and the dam site on the Rogue River. There was lots of foot and bicycle traffic, and we answered quite a few questions about Ham Radio, CW, and voice communications via radio.

We were running about 5 watts to a random wire antenna, up about 15'. A "weight eating tree" ate my golf ball weights, so we threw a string over a convenient branch about 20' from the operating position, and use it to hoist the antenna. The match was excellent on 40 metres, but we couldn't get a match on 20. A similar antenna had done well for QRPTTF, so we were optimistic. Our optimism waned because we didn't raise anyone after over an hour of CQ's. Don't know if it was conditions, antenna configuration, or operator error. We heard only a few fairly strong stations in the lower parts of the band, and somewhat of a "pile up" on WW2LST, a museum ship so it appeared that the receiver was working. Even on the strongest stations slow QSB was evident. We tuned to 7250, where we said we'd be operating voice, but there were no strong stations, and only a few weak stations, so we didn't try SSB.

The day wasn't a total bust, because 2 meter FM was useful. We contacted several stations on the wide area linked repeaters in Michigan using that mode.

I'm glad to hear that conditions were better for others.

Subject: radio for sale

I have the following radio for sale that needs to go extremely quickly:
Kenwood TMV71A dule band mobile.

This radio is echo link ready, has a reversable face, and recieves from 108.00 mhz to 1300.00 mhz. It puts out 50 watts on 2 meters, and 35 watts on 70 cm.

I still have the original packaging, and all of the manuals.

I also have preinstalled, the VGS1 voice chip, which is not only a voice synthesizer, but a voice recorder as well.

I will also include the PG5H cable kit for echo link. There is nothing that comes with the radio that wasn't sent from the factory originally. I have made no other upgrades to the radio other then having the voice chip installed. There are no other modifications to the rig, and it has been in a clean smoke free environment.

I am asking $325 for everything mentioned.

This radio needs to be sold by thursday morning. I am moving to Grand Rapids, and need to come up with some money for the prorated first month's rent, and a security deposit. If you can get me the requested price sooner, the better for me.

I am having Tom post this to the list because there is a good chance that I can get it sold quickly. I live in Muskegon, but if there is someone interested in Grand Rapids that can meet with me thursday morning to make the exchange, then I will be more then happy to oblige them by meeting them there.

I can be reached at 231-457-7136. You can also contact Tom, kb8vee and he will pass along any contact information.

Please help out a blind ham that really needs it.

73,
Chris, w8cjs

Topic: 4255 Message: 4255

Hi, all.

I'm writing this e-mail on my laptop at my son's house near St. Louis,MO.

I'm trying to get in touch with Abe (W8HVG), from the IRA link system, about getting his permission to use the link system if needed for back-up communications for the Michigander Bicycle Tour which will be traversing through Western and Northern Lower Michigan this coming July.

The e-mail address I now have for abe is:

abra@...

Perhaps he is out of town too, but Abe usually responds to his e-mail fairly quickly.

Thanks for any help you can provide.

LOCAL RADIO ENTHUSIASTS SHARE THEIR PASSION FOR TECHNOLOGY AND PUBLIC SERVICE DURING AMATEUR RADIO WEEK
For More Information Contact:
John T Fischer
616-402-0665
Grand Haven Mi) -- On-air demonstrations, satellite communications and emergency preparedness activities are on tap for members of the North Ottawa amateur radio club as they gear up to celebrate Amateur Radio Week, June 23 & 29 2008
During Amateur Radio Week, enthusiasts will put on demonstrations, give talks to community groups and take part in other activities to raise awareness about Amateur Radio. The week culminates with the annual preparedness exercise called "Field Day," June 28 and 29. Field Day is sponsored by the American Radio Relay League (ARRL), the national association for Amateur Radio.
During Field Day, operators set up in local parks, at shopping malls, or even in their own backyards, and get on the air using generators or battery power. Field Day was designed to test operators' abilities to set up and operate portable stations under emergency conditions such as the loss of electricity. "We want the community to know that in the event of an emergency, we will be ready to assist in any way we can, says Jim Miller (Activities director.) "While people often think that cell phones or other communications technologies have replaced ham radio, we can still provide an important communications service that others can't."
Field Day is a serious test of skill, but it is also a contest for fun and the largest "on-air" operating event each year. During the weekend, radio operators try to contact as many other Field Day stations as possible. More than 30,000 Amateur Radio operators across the country and Canada participated in last year's event.
The North Ottawa amateur radio club will hold Field Day at Coast Guard park on north shore rd. and will be operating from Sat June 28 starting at 8:00am for setup At 2:00 pm Radio operations start until 2:00 pm Sun June 29 "We hope that anyone who is interested in seeing what Amateur Radio is all about will come out for Field Day," says Jim Miller Activities director.
Today there are more than 670,000 Amateur Radio operators in the United States and more than 2.5 million worldwide. To find out more about Amateur Radio or how you can get started, contact John Fischer at 616-402-0665, or email kc8uny@... Information is also available from the American Radio Relay League, 225 Main Street, Newington, CT 06111 or by calling 1-800-32-NEW HAM. The URL for the ARRL's home page on the World Wide Web is www.arrl.org.

http://www.arrl.org/news/stories/2008/06/10/10151/?nc=1
"We Do That" with Amateur Radio!

The third ARRL Public Relations campaign -- We Do That - with Amateur Radio -- celebrates the technology side of ham radio. According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, Amateur Radio means many things to many people. "What is it about Amateur Radio that arouses the interest of people?" Pitts asked. "You have the fun, friendship and hobby side. We showcased this side in 2006 with our Hello campaign. You have the emergency service side. We brought this valuable part of Amateur Radio to the public's eye in 2007 with Emergency Radio - Getting the Message through for Your Family and Community. And now you have the technology and creative side. In 2008, we are capitalizing on this third prong, getting word out to the public that there is tons of stuff you can do with Amateur Radio."
Unveiled at the 2008 Dayton Hamvention® this past May, this new coordinated public relations effort shows the world the technological activities and creative imaginations that Amateur Radio's people love. Like the previous public relations campaigns, Pitts said, this is a campaign with several interlocking parts:
Public Service Announcements
There are Public Service Announcements (PSAs) that can be played on commercial radio stations. Check these out on the ARRL Public Information Officer Web site; more will be coming out as the year unfolds. These mp3 files are easily downloaded and can be taken to local radio stations. "Many radio stations have a public service obligation they need to fulfill, and these PSAs are a great way for them to do so, while showcasing the neat things we do as hams," Pitts said.
Brochures
ARRL has created an attractive brochure http://www.arrl.org/brochures/ that celebrates ham technology. This brochure shows hams doing many exciting activities, from Green Radio -- Amateur Radio using renewable energy sources -- to the search for extraterrestrial intelligence (SETI) through time and space itself. These brochures, in packs of 25, are available at no cost except for a small shipping fee.
WeDoThat-Radio.org
A new special Web site has been created just for this campaign. "Maximizing the strong points of the
Hello-Radio http://www.hello-radio.org/hello/ and Emergency-Radio
http://emergency-radio.org/ Web sites before it, WeDoThat-Radio.org uses some of the newer technologies similar to the blog format, allowing for easy topic additions and changes, even providing a place for and visitors to ask questions," Pitts said.
Stickers
Let's admit it, hams and kids like free things and stickers are fun. So we made up a bunch to share. If you happen to have a presentation to students, it's a nice touch. These are "free while the supply lasts," Pitts said.
Talk on a Disk
What began as an experiment in 2007 has since become a major success. The ARRL's Talk on a Disk was quickly snatched up and used by people making presentations to groups. This CD contains all the materials you need to make a good PowerPoint presentation before a non-ham

group, including slides and supportive audio and video. "For 2008, we created a brand new Talk on a Disk highlighting the technology campaign and coordinated with the brochures. It can make almost anyone look good in front of a group. Just follow the script! Or, you can modify it to meet local needs," said Pitts. If you have a presentation to make and want to talk about the technology of ham radio, please e-mail Pitts about it.

Swiss Army Knife for PIOs

The 2008 Knife, Pitts said, is actually a CD with all the basic forms and information a Public Information Officer (PIO) should need -- all in one place. "Last year, we produced more than 1000 of these and they were all snatched up," Pitts said. With audio and video files, documents in computer forms that PIOs can modify to meet local needs, as well as hundreds of pointers and ideas, the Swiss Army Knife for PIOs has become a mainstay for public relations work. Disks are available for PIOs by sending Pitts an e-mail.

Every Ham is a PIO

"There is a saying," Pitts said, "that all news is local -- and it is true. If there is not a local or personal 'hook' to a story, it does not make it into the news. Because of this, the Public Information Officers in your area are critical to the local perception of Amateur Radio." When PIOs take these materials and modify them for local use, it affects everything from antenna regulations to club membership levels.

But it is not just up to the PIOs to achieve positive publicity for hams, Pitts said: "There is another saying, 'Every ham is a PIO.' When people become curious about Amateur Radio they turn to the first ham operator they find and that conversation is crucial to the future. All the brochures, TV ads, radio and news stories are of no benefit if that initial conversation with a potential recruit is not positive. PIOs can only 'bring the fish to the boat.' It is up to every ham to be ready to bring them in by taking the time and effort to make the initial one-on-one contact a positive experience. In the end, 'It takes a ham to make a ham.'"

Need Help?

There is a wealth of materials available http://www.arrl.org/pio for anyone to use. Here you can find background information handouts for media, as well as all sorts of helpful files and tips. Each month, Pitts puts out CONTACT!, an e-zine for ARRL PIOs that contains ideas, information and timely materials. The ARRL Public Relations Committee is also able to aid groups facing unusual problems or situations. These PR veterans have a wealth of knowledge you can draw upon. There is a public relations email reflector where PIOs from around the country share their problems, ideas and successes with other PIOs.

It's Up to You

The energies that your club -- and you as an individual -- put into positive PR work will pay off for your radio future in many ways, Pitts said. "Go show the world that 'It's not just your grandfather's radio anymore.'"

4270. WEAVER'S WORDS -- Post Webinar Special Edition

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-15 11:42:17 UTC
From: Tom VanderMel KB8VEE
Topic: 4270 Message: 4270

[As always, reply only to k8je@....]

This is a short "special edition." The principal purpose for this edition is to request feedback from GLD members who were able to participate in the Webinar this past Saturday. Your opinion of the Webinar format for conferencing within our Division is very important to me.

If you participated in the Webinar, did you like the format? Did you dislike the format? Do you believe that discussions with questions and answers such as on Saturday would be useful? Not useful? Do you vote "I think we ought to hold Webinars" or do you vote "Do not hold Webinars?"

Please send your comments to k8je@.... Please place the subject WEBINAR COMMENT in the subject line of the e-mail message.

Tnx for your help. I hope to be able to piggy-back on future Webinars in the near future -- and to be able to give you greater advance notice of these.

73, TNX,

Jim

- Webinar test.
- You asked.

+++ Webinar test +++

I will appreciate it if you who had the opportunity to take part in last Saturday's Webinar test will let me know your impression of it. In particular, do you believe it is a viable method to use to hold on-line and telephone conferences within our Great Lakes Division? Was the form of the conference useful to you? Do you believe it would be useful to other members of the Division?

Please send your comments to k8je@....

I apologize for the short timing I gave in notifying you of the Webinar. I became aware of it only several hours before I forwarded notice of it to you.

I want to thanks Atlantic Division Director Bill Edgar, N3LLR for allowing us to piggyback on his Webinar. I believe we will have another opportunity or two to join him in future Webinars before we need to make the decision about buying into this same system for our Division.

+++ You asked +++

A few members asked what is going on that such a fuss is being made over D-Star when it is obviously a product of ICOM and is not open to other equipment makers. They are concerned we should not promote communication systems when the sales only benefit a monopoly.

The answer to this question is fairly simple. D-Star is not a monopoly. It is open for all manufacturers to use.

This digital form of communication was developed through a grant from the Japanese government. The developers were the Japan Amateur Radio League (JARL) and ICOM. Once developed, ICOM chose to manufacture gear using this technology. ICOM and JARL have offered the system to other manufacturers; however, none of the others have chosen to use D-Star . . . to this date.

Because of its capabilities, development of D-Star systems has been pursued with vigor by ARES(r) in some Sections of the country. There are hot-spots of great interest in other Sections. D-Star supports voice, digital and other modes.

The fact that ICOM is the only manufacturer that is selling D-Star gear is not necessarily surprising. One marketing strategy of corporations in response to a new, breakthrough product is to wait to enter the
> market until they are sure the market will support a second
> manufacturer. Until this has been demonstrated, they wait rather than
> invest money in products and advertising. I believe we are in the
> waiting period at this time.
>
> The fact that ICOM currently is the only manufacturer of D-Star
> equipment is not because ICOM has a monopoly. The D-Star technology is

4271. Tool Max this week

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-16 13:53:04 UTC
From: Tool Max Ind. Supply
Topic: 3847 Message: 4271

Check out our New Web sight at www.toolmaxonline.com Let me know what you think.

New items this week I need some, bring them in.
1 Radio Shack Pro 2018 200 Channel Scanner Works great $50
1 NWS All Weather Rain Gauge New $10
1 X-50 Diamond base Antenna Like new $70

We have Antennas, connectors, and mounts from Tower Electronics. We are a Dealer for Tower and have put them in Stock.

Other NEW items in Stock

14 Amp Jetstream Power Supply $55
28 Amp Power Supply $90 With Meters out of stock now $110
45Amp Power Supply $170
Lighting Arresters $21.50 ea
HF Antenna 20 Meter, 40 Meter, 75 Meter Fiberglass Hamsticks in Stock $20 each
New SWR Watt/Power & Field Strength Meter for 1.7-150 MHz in Stock $30
J Pole Antennas in Stock $15
The Te-Ne-Ke code key by the North Ottawa Club $35.00
RG-58 Cable .25 per foot
RG-8 .$1.00 per Foot
RG-8X Coax Cable .50 per Foot
75 ohm Cable 9040 International Wire and Cable .35per foot
PL-259 Connectors $3.25 ea adadapters for RG-58 or RG-8X $1.10 ea
BNC - SO-239 Connectors $2.50 ea
Double Female Connectors $2 ea
2 Amp Power Supplies good to power Hand Held $8
Digital Volt Meters $5.00
Heavy duty 12 Volt Socket to Cigarette lighter plug

We also have Diagonal Pliers, Digital Multi Testers, Electrical Tape,Precision Screwdrivers Sets, Soldering guns, Irons and Industrial Batteries for your HT's

We are the only stocking Dealer in Michigan for W5YI Gordon West Study Manuals.

Technician Class $18.95
General Class $20.95
Extra Class $21.95
FCC Part 97 rule book only $3.95
ARRL Level 1 Amateur Radio Emergency Communications Course Level 1 books $16 each

Ramsey Kits for Kids (or Adults)

300 in 1 Electronic Lab $70
Bell Action Kit $9
Motor Action Kit $8

LED Binky Kit $8
Police Siren Kit $8
Electronic Dripping Faucet $10
LED Strobe Light with Case $45
AM Broadcast Transmitter Kit with Case $35
Tri-Field Meter $64

Other Used Equipment on Consignment
1 SMC 7004BR 4 port Computer Hub $5
1 Otto Head Set with Mic $5
1 IC 706 interface cable unit to use Power Amp $20
1 Box of Large Compactors 10-12 pc total $5
HP PDA Pocket PC Model Jornada 545 16MB Ram Color PDA $100
Paum Zire Black & White PDA $30
Arrow 222 5 Element 220mhz Beam $25
1 Sencore SG-165 AM-FM Stereo Analyzer $30
1 GW GDM 8135 Digital Multimeter $30
MFJ-202B Noise Bridge $40
PC-1A Kenwood Phone Patch $40
#425 B+W Low Pass Filter $15
MFJ-704 Low Pass Filter $20
Ringo Ranger 2 meter antenna $35
11 Element 2 meter Beam $45
JT776SMA HT Antenna $19
IC-255A 2 meter Radio with no tone board Like New from 1982 Good Packet Radio $45
Tubes A great Assortment of tested used Tubes $1-$4 each
B&K Model 4011 Precision function Generator $60
B & W Antenna Tuner VS-300A $40
RCA Volt Ohm Meter $25
Barket & Williamson Low Pass Filter $5
Speakers $2
Barket and Williamson Rotary Inductor and Counter for Antenna Tuner $50
Center Insulator for HF antenna $5
LED Emergency Light $10
Motorola consolette Base Station for packet set up on 145.090 $45
MFJ-722 Notch Filter $30.00
M1000 Regency 10 Ch Scanner Works great $25
Low Pass filter $5
EICO Solid State FET/TVM Model 240 VOM in good condition $40
2-9 inch clamps to mount antenna on large poles or vent pipes $5.56 each and less for smaller ones

Heathkit items in stock

Model HD-19 Hybrid Phone Patch for $5
2 HD-15 Phone Patch for $5 each
1 Model 10-17 Oscilloscope $40 Make offer
Heathkit Drive Belts for SB-100, 101,102, HW 100,HW101 $3

Tool Max Industrial Supply is the Tool and Ham Radio retail store on Schamber Dr just off Pontaluna Rd and US-31 just north of the old Hob Knob or Michael's Restaurant (Now tore

down) in Muskegon . We have tools, industrial suppliers and Ham radios parts for sale. For more information call or e mail Tom KB8VEE at 231 798-7898 I am in the Store from 8:30AM-4:30PM Monday-Friday. Stop by and see me for all your Ham needs.

Hi Tim.
Thank you for the information. I going to be visiting Field Day sites in several counites as a Red Cross official and am working on my visitation schedule. I am currently deployed to Indiana and working on the Disaster Response Operation here that is for the tornado and flooding. I will be back by Field day.

Best Regards,
Rich "Doc" Strait, AC8AL
Volunteer Disaster Services Technology Lead
Red Cross serving Muskegon, Oceana and Newaygo counties.

Subject: [illinoisdigitalham] Announcing D-STAR at Field Day

D-STAR Field Day!
If you or your club is planning on participating in Field Day this year, then think about also setting up a D-STAR Field Day station and participating in D-STAR Field Day. The rules are similar to Field Day in that is to demonstrate capabilities to others such as Amateur Radio Operators, Public Officials, and even your own Club Officials.
Setting up a D-STAR Field Day Station doesn't take much, a handheld and a log book may be all that is required. Or go all out and setup a Voice, Low Speed Data, and High Speed Data Station.
The rules and more information may be seen at DSTARINFO

 http://www.dstarinfo.com/news/DSTAR_Field_Day.html

We look forward to hearing you during D-STAR Field Day!

My friend from Albuquerque NM gave a seminar on biking and
ham radio at the Dayton Hamvention this year. Had his bike
and his rig, and all, right at the convention seminar. It as cool.

I enjoyed that little intro this guy made up. Made my day. Thanks.

News Release
National Ham Radio Emergency Test June 28-29
Newington, CT June 10, 2008 -- Thousands of Ham Radio operators will be showing off their emergency capabilities this weekend. Over the past months, the news has been full of reports of ham radio operators providing critical communications in emergencies world-wide. During the recent tornadoes and in Hurricane Katrina, Amateur Radio - often called "Ham radio" - was often the ONLY way remaining by which people could communicate. When trouble is brewing, ham radio people are often the first to provide critical information and communications. On the weekend of June 28-29, the public will have a chance to meet and talk with these ham radio operators and see for themselves what the Amateur Radio Service is about. Showing the newest digital and satellite capabilities, voice communications and even historic Morse code, hams from across the USA will be holding public demonstrations of their emergency communications abilities.
To find out where the Amateur Radio operators will be set up in your area, go to http://tinyurl.com/5bkhzp
This annual event, called "Field Day" is the climax of the week long "Amateur Radio Week" sponsored by the ARRL, the National Association for Amateur Radio. Using only emergency power supplies, ham operators will construct emergency stations in parks, shopping malls, schools and back yards around the country. Their slogan, "When all else fails." is more than just words to the hams as they prove they can send messages in many forms without the use of phone systems, internet or any other infrastructure that can be compromised in a crisis. More than 34,000 amateur radio operators across the country participated in last year's event.
"We hope that people will come and see for themselves, this is not your grandfather's radio anymore," said Allen Pitts of the ARRL. "The communications networks that ham radio people can quickly create have saved many lives in the past months when other systems failed or were overloaded."
There are 654,000 Amateur Radio operators in the US, and more than 2.5 million around the world. Through the ARRL, ham volunteers provide emergency communications for the DHS Citizens' Corps, Salvation Army, FEMA and hundreds of state and local agencies, all for free.
To learn more about Amateur Radio, go to www.WeDoThat-Radio.org. The public is most cordially invited to come, meet and talk with the hams. See what modern Amateur Radio can do. They can even help you get on the air!
In this area The North Ottawa Amateur Radio Club will be setting up at Coast Guard Park setup starts at 8:00 am radio operating starts at 2:00pm and runs until 2:00pm Sun June 29 2008 the public is invited to see what amateur radio is all about or to find out how to become an amateur radio operator

"We hope that people will come and see for themselves, this is not your grandfather's radio anymore," said Allen Pitts of the ARRL. "The communications networks that ham radio people can quickly create have saved many lives in the past months when other systems failed or were overloaded."
There are 654,000 Amateur Radio operators in the US, and more than 2.5 million around the world. Through the ARRL, ham volunteers provide emergency communications for the DHS Citizens' Corps, Salvation Army, FEMA and hundreds of state and local agencies, all for free.
To learn more about Amateur Radio, go to www.WeDoThat-Radio.org. The public is most cordially invited to come, meet and talk with the hams. See what modern Amateur Radio can do. They can even help you get on the air!
In this area The North Ottawa Amateur Radio Club will be setting up at Coast Guard Park setup starts at 8:00 am radio operating starts at 2:00pm and runs until 2:00pm Sun June 29 2008 the public is invited to see what amateur radio is all about or to find out how to become an amateur radio operator

4281. Use if UI-View for Skiwarn and Field day

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-18 02:01:50 UTC
From: Don Meyer
Topic: 4281 Message: 4281

Hello Everyone .... In Ottawa County we have been looking at implementing the use of one of the existing ham radio networks for Skywarn. Using the APRS network and utilizing a program named UI-View we will be able to place objects representing spotter locations on a map and be able to see them at different locations connect by the APRS network and the Internet. If this was to happen in every county we could see were spotters are being deployed and how well we have Michigan covered.
By setting up the linked repeaters in the county for the Skywarn Weather information net and using simplex frequencies in different areas of the county for spotter check in and check out we will be able to cut traffic on the main system, know in multiple places were spotters are and with UI-Views message system communicate with Skywarn command and net control. This would also provide for a better communications and coordination of spotters. This would also provide a place we could use hams that do not want to participate with attending skywarn but like to use packet radio and have a good station at home for simplex phone and want to stay at home.
With fieldday coming up I would like to see West Michigan Hams take a look at UI-View (free download, request of a donation of your choice to a cancer fund for free registration) and if possible have a APRS station setup for field day this year.
If you think this is a good idea for your area also please drop me a email at : kb8odb@... and I hope to see you on the APRS network.
P.S. you can download the UI-View program register it, set it up (it steps you through it) and with a Internet connection see what is out there on APRS...no radio required.

Hi Tom,

I would like to buy a couple of your hamstick antenna's but with gas prices i cannot drive up to your location. Would it be possible to have them shipped to me. I live in Barryton, if you can ship them what would the shipping be.

Thank You and 73
Steve KD8DHZ

Check out our New Web sight at www.toolmaxonline.com Let me know what you think.

New items this week I need some, bring them in.
1 Radio Shack Pro 2018 200 Channel Scanner Works great $50
1 NWS All Weather Rain Gauge New $10
1 X-50 Diamond base Antenna Like new $70

We have Antennas, connectors, and mounts from Tower Electronics. We are a Dealer for Tower and have put them in Stock.
Other NEW items in Stock

14 Amp Jetstream Power Supply $55
28 Amp Power Supply $90 With Meters out of stock now $110
45Amp Power Supply $170
Lighting Arresters $21.50 ea

HF Antenna 20 Meter, 40 Meter, 75 Meter Fiberglass Hamsticks in Stock $20 each
New SWR Watt/Power & Field Strength Meter for 1.7-150 MHz in Stock $30

J Pole Antennas in Stock $15
The Te-Ne-Ke code key by the North Ottawa Club $35.00
RG-58 Cable .25 per foot

RG-8 .$1.00 per Foot
RG-8X Coax Cable .50 per Foot
75 ohm Cable 9040 International Wire and Cable .35per foot

PL-259 Connectors $3.25 ea adadapters for RG-58 or RG-8X $1.10 ea
BNC - SO-239 Connectors $2.50 ea
Double Female Connectors $2 ea
2 Amp Power Supplies good to power Hand Held $8
Digital Volt Meters $5.00
Heavy duty 12 Volt Socket to Cigarette lighter plug

We also have Diagonal Pliers, Digital Multi Testers, Electrical Tape,Precision Screwdrivers Sets, Soldering guns, Irons and Industrial Batteries for your HT's

We are the only stocking Dealer in Michigan for W5YI Gordon West Study Manuals.

Technician Class $18.95
General Class $20.95
Extra Class $21.95
FCC Part 97 rule book only $3.95

4284. Wind Turbine in a Box

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-18 15:04:06 UTC
From: Linda
Topic: 4284 Message: 4284

Excellent news story on mlive.com for those of us following alternative energy solutions:

http://blog.mlive.com/chronicle/2008/06/invention_brings_wind_energy_h.html

It won't get you off the grid completely, but an interesting development and perhaps a fun toy for Field Day and other outback type operations.

Linda, AB8QH

4287. Re: Wind Turbine in a Box

Topic: 4284 Message: 4287

When I read this in the paper last night, I did some quick math. My electric bill is about $35/month. At a 20% savings, the payback is 23 years.

My brother installed a system for Y2K. It has more power, batteries, inverters, and is connected to the grid. When the generator produces more power than he is using, he sells it back to CE for about a tenth of what they charge. Nice markup on their part.

I asked him a while back about his return on investment and he declined to tell me, that says how bad it is.

I think GVSU is going after the third world market, so people can charge up their iPods.

Don't feel bad. Turns out to be an excellent discussion. It just proves that one has to do the math, and really figure out what is wheat and what is chaff before embarking on any project.

Good lessons. Obviously some tools are better than others, and the analysis of knowing how to discern which is what is worthwhile.

Thanks. // Richards - K8JHR //

I for two, have long wondered if our consumption habits would ever change to support this technology. We hams use this kind of stuff to power repeaters on hill-tops, not home sites with air conditioning. Cruising sailors use it to power GPS & nav lights but never turn the prop. Mark your math is right, and yes it will stall before generating tripping current for circuit breakers (mostly), but no it just doesn't fit the model. We are stuck with gas gens in the back yard -- aarrggg.

As I've read this stuff about applying small wind turbines in home use I've wondered what kind of scam was afoot. Viewed from the utility, local gen is more pain than promise. The cost of tuning wind power into the standard 120vac is a huge percentage of the total. So look for stuff that could run sometimes when the wind is blowing, on variable voltage, probably DC, nor require many watts. Not much comes to mind does it?

So we are back to putting repeaters and batteries on windy hill tops. Now we can morph into a positive review? Windy hills & windy hams -- not a bad match up. But it won't sell many. :-)

Linda, Please don't ever feel sorry about bring these things up. It was a learning experience for many. and myself I thing more things on the order of GREEN should be brought up, good or bad. The reflector should be used more for discussion on things like this and radio of course. Most of what I see on the reflector is not very thought provoking. Please continue with things you find as far as I am concerned.

Jim.

Hello All,

I wanted to run an idea by Ham Radio community and members of the MAARC. As part of my job each month as V.P. I am required to plan out our programs for each monthly meeting. Well for the month of July the program I had planned feel through. So with the great big huge event next weekend called Field Day I thought maybe we could have a Post Field Day meeting slash discussion about how things went and thoughts on how we can make it better for the next year.

So I am asking YOU the members and the Ham Radio community your thoughts for this idea???

Thank you,

73' de Tom W8AMZ
MAARC Vice President

4300. Re: Wind Turbine in a Box

While driving past Grand Valley's building in Muskegon I see that they have added a wind generator that looks like a lolly pop. A neighbor has one of these wind turbines and I've been wondering if they really work anywhere near as advertised. GVSU is in the energy "business" and way out there trying new things. I'm guessing that if I were to drop into their facility why would they not give me a straight answer to the question, "How much energy do these things generate?"

I'm glad that some folks have "done the math" and shown a flaw in the logic of the "snake oil" salesmen. Thank you.

We can all wonder at the possibility. And we can encourage each other's dreams. Certainly it is a challenge to take your home off the grid. And certainly it is a worthy challenge. Don't squish a dream. Add a little reality. Energy costs, like gasoline, (aren't they the same thing?) (it's just politically correct to jump on the gas price band wagon) will certainly only go higher. Find a way to help the monthly budget.

Bill, AB8SC

4302. New items at Tool Max

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-23 15:48:10 UTC

Check out our New Web sight at www.toolmaxonline.com Let me know what you think.

New items this week from K8BGP

1 AR 146 2 meter mobile Radio $30
1 IC-725 HF Radio $300 or BO
1 MFJ 949B HF Tuners $30
1 Micronta 2.5 Amp Power Supply $5
1 Astron 20 AMP Power Supply $30
2 Pyramid 20 Amp Power Supply $30
1 2"x2" Speaker $3
1 Comet CP-5 3/8-24 Antenna mount for Van Groves $25
1 Trailer Ball and Hitch mount $10

We have Antennas, connectors, and mounts from Tower Electronics. We are a Dealer for Tower and have put them in Stock.

Other New items in Stock

14 Amp Jetstream Power Supply $55
28 Amp Power Supply $90 With Meters out of stock now $110
45Amp Power Supply $170
Lighting Arresters $21.50 ea
HF Antenna 20 Meter, 40 Meter, 75 Meter Fiberglass Hamsticks in Stock $20 each
New SWR Watt/Power & Field Strength Meter for 1.7-150 MHz in Stock $30
J Pole Antennas in Stock $15
The Te-Ne-Ke code key by the North Ottawa Club $35.00
RG-58 Cable .25 per foot
RG-8 .$1.00 per Foot
RG-8X Coax Cable .50 per Foot
75 ohm Cable 9040 International Wire and Cable .35per foot
PL-259 Connectors $3.25 ea adadapters for RG-58 or RG-8X $1.10 ea
BNC - SO-239 Connectors $2.50 ea
Double Female Connectors $2 ea
2 Amp Power Supplies good to power Hand Held $8
Digital Volt Meters $5.00
Heavy duty 12 Volt Socket to Cigarette lighter plug

We also have Diagonal Pliers, Digital Multi Testers, Electrical Tape,Precision Screwdrivers Sets, Soldering guns, Irons and Industrial Batteries for your HT's

We are the only stocking Dealer in Michigan for W5YI Gordon West Study Manuals.

Technician Class $18.95
General Class $20.95

2008 K6KPH Field Day Bulletin Schedule

Day	Mode	Pacific	Mountain	Central	Eastern
SATURDAY	CW	7:30 AM	8:30 AM	9:30 AM	10:30 AM
	CW	5:30 PM	6:30 PM	7:30 PM	8:30 PM
	Teleprinter	6:30 PM	7:30 PM	8:30 PM	9:30 PM
SUNDAY	CW	7:30 AM	8:30 AM	9:30 AM	10:30 AM
	Teleprinter	9:30 AM	10:30 AM	11:30 AM	12:30 PM

W1AW will operate on its regularly published frequencies.

The special PSK31 bulletin will be transmitted on the regular W1AW
teleprinter frequencies.

CW frequencies are 1.8175, 3.5815, 7.0475, 14.0475, 18.0975,
21.0675, 28.0675 and 147.555 MHz.

Teleprinter frequencies are 3.5975, 7.095, 14.095, 18.1025, 21.095, 28.095 and 147.555 MHz (includes PSK31).

Phone frequencies are 1.855, 3.990, 7.290, 14.290, 18.160, 21.390, 28.590 and 147.555 MHz.

W1AW will transmit the bulletin in 45.45-baud Baudot RTTY, 100-baud AMTOR FEC Mode B, and 110-baud ASCII.

The Maritime Radio Historical Society's K6KPH will transmit the "W1AW" Field Day 2008 message for the benefit of West Coast stations on 3.5815, 7.0475, 14.0475, 18.0975 and 21.0675 MHz, CW only.

The frequencies for K6KPH Teleprinter (RTTY and FEC AMTOR) will be 7.095 and 14.095 MHz. The K6KPH schedule is accurate as of June 24, 2008.

Any additional transmissions or changes in the schedule will be posted on the web at,
http://www.arrl.org/contests/forms/fd-2008-w1aw-sked.html .

Subject: D-STAR Field Day Update

The days are dwindling. D-STAR Field Day is just about here.

If you haven't heard about it, take a visit to www.DSTARINFO.com for more information.

First, there will be rewards! Icom America has generously offered to donate plaques to the winners of the event. The following plaques will be presented:

- 1st place Overall
- 2nd place Overall
- 1st Place Data Contacts
- 1st Place Bonus Points

So get out this weekend and see if you can get one of these for your club!

We've added some updated information about some suggestions for operating and logging. Please visit www.DSTARINFO.com to download the updated information, as well as the rules.

The goals for D-STAR Field Day is to have fun, show others how to have fun J, and to see just what it is like when we get a lot of people on the air.

A little secret, look at the rules, do a bunch of demonstrations, easiest way to gain points.

Ed Woodrick WA4YIH

4305. Capacitors needed

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-24 19:43:35 UTC
From: Joe Veldhuis
Topic: 4305 Message: 4305

I recently picked up several large boxes full of resistors with values ranging from less than 10 ohms to nearly a gigohm, many of which are nonstandard values; so I shouldn't have any trouble finding the resistors I need for whatever project I might want to work on. However, I still have a shortage of (useful) capacitors.

Since I will be using most of them in a solderless breadboard at some point (prototyping is a lot easier when soldering isn't involved), the leads need to be fairly long (at least a centimeter) and not too big (smaller than 0.6 millimeters). Those are the only specs that I really care about.

I could also use similarly sized diodes. Doesn't matter what kind they are as long as they work and are labelled in some meaningful way.

Let me know what you want to get rid of and I'll see what I can do with it...

-Joe, N8FQ

4306. Field Day up north

Greetings.

Does anyone know if there will be a Field Day active on Mackinac Island?
What club fields the event?
Where might they set up?

I googled it without joy...

4309. Field Day Shack Leaders

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-26 13:55:32 UTC
From: w8amz
Topic: 4309 Message: 4309

Greetings Field Day Shack Leaders

I will have the power distribution system delivered about 3:00 PM on Friday and operational by 3:30 PM. It would be a good idea to come out early to try out the system with your shack location. Although there are distance limitations to the distribution system, exceeding them will cause a voltage drop that could be harmful to your equipment. We will try to centrally locate it to all the shacks. You as shack leaders will be required to have a good 12-gauge or heavier extension cord to go between your shack and the power pedestals. The maximum length of your extension will be based on where you plug in at on the distribution system.

On another note I will have an extra 10x10 canopy that can be used with or without the screen sides and a couple of extra portable 20' and 30' masts for antennas if needed..

Feel free to contact me if you have any questions by email or call me at 231-855-0281

4318. Morley receive site grounds maintenance plus campout.

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-06-30 15:45:27 UTC
From: Jack Amelar
Topic: 4318 Message: 4318

Morley receive site grounds maintenance plus campout.

It's time once again for grounds maintenance at the 250ft commercial tower NE of Morley owned by T&W Electronics which, among other radio services, hosts the Lowell Amateur Radio Club 145.27- (94.8Hz) Morley remote receiver 144.67 MHz.
Part of our arrangement with T&W is upkeep of the grounds.
Being the site is a mix of field and woods located in a rural area near Amish families and an Elk-Deer-Buffalo farm, some of us combine this with a camping trip.
The main cleanup day will be this Saturday, July 5. Figure start around 10AM. Rolls and coffee will be provided in the morning, Burgers and beverages for lunch. The "better half" and kids are welcome.
There are no toilet facilities here, but I will have the rest room in my motorhome available. It's not a problem, really!
I plan to arrive Thursday the 3rd and not leave "until I'm ready to".
Anyone else interested in a cheap non-crowded campsite for the Independence Day weekend is welcome. Electricity is available.
Questions? My cell phone is (616)318-4551

On the cleanup agenda this time. Mowing. Cut out stumps. Clearing trees and brush growing under the east guy wires. If time and energy permits, the same for the north guy wires.
Extra chain saws and operators a big plus. Anyone with access to an industrial grade chipper would be a big plus as well.

HOW TO GET THERE?
Use your preferred mapping program and input: 3800 155th Ave, Morley, MI 49336

Directions from Grand Rapids via US-131 Expressway are simple. If your arriving from Lowell, the "from Lowell" directions use paved county roads and really is the shortest, quickest way. But I know some people will go 100 miles out of the way to use expressway. If your heading up, you decide for yourself.

FROM GRAND RAPIDS to Morley receive site.

Head north on US-131 expressway to Morley exit 125, Jefferson Rd.

Turn right / east for 1 1/2 miles to Northland Dr. in the center of Morley.
Just before passing thru Morley, give a shout on the radio to see if we need Ice or anything from a gas station / convenience store.

Jog left / north then right / east. Continue on Jefferson Rd for another 1 3/4 miles.

Turn left / north on 155th Ave for 2 1/2 miles.

Turn right in the drive and park. You will have spotted the tower well before you arrived.

FROM LOWELL to Morley receive site, start at the intersection of Main St. / Hwy M-21 and Hudson. There are Shell and BP fuel stations on opposite corners.

Head north on Hudson St, soon changes to Lincoln Lake Ave, for 20 miles, crossing Hwy M-44 and M-57 along the way.

Turn left / west on 18 Mile Rd., toward Cedar Springs, for 1 mile.

Turn right / north on Meddler Ave for 4 miles. Meddler ends at 22 Mile Rd.

Turn left / west on 22 Mile Rd for 1/2 mile. 22 Mile Rd borders Kent and Montcalm Counties.

Turn right / north on Amble Rd, entering Montcalm County, for 2 miles.

Turn left / west on Briggs Rd for 1 mile.

Turn right / north on Bailey Rd for 4 1/2 miles, passing through the village of Coral.
Just before passing thru Coral, give a shout on the radio to see if we need Ice or anything from the gas station / convenience store.

Turn right / east on Church Rd for 1 mile.

Turn left / north on Amble Rd for 7 1/2 miles. **If Amble Rd were a thru street, I would not have routed you thru Coral!** You will cross Hwy M-46 along the way. Past M-46, you will enter Mecosta County where Amble Rd becomes 150th Ave.

Turn left / west on Jefferson Rd for 1/2 mile.

Turn right / north on 155th Ave for 2 1/2 miles.

Turn right in the drive and park. You will have spotted the tower well before you arrived.

Hello, reference NIMS compliance, for all county emergency management volunteers the goal is to have everyone take IS100, IS200, IS700, & IS800.

For EOC Staff, two additional courses are desired which are IS300 & IS400.

4324. call for communications volunteers for upcoming Michigander Bicycle Tour

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-07-01 18:21:50 UTC
From: T Behler
Topic: 4324 Message: 4324

Hello all.

This is Tom Behler: KB8TYJ, Mecosta County EC/RO. I will be serving as net control for the Michigander Bicycle Tour, which will occur from July 12-18. My purpose in writing is to put out a call for any ham volunteers that can help with communications for either all or part of the week-long event. This is a large event that will cover a total of nine Lower Michigan counties. If you're available to help please sign up via the link below. This will make it easier for me to know who is available to help, and on what days.

Sign-up link:

http://kcraces.net/signup/michigander.php

Our basic daily schedule, and the counties involved are as follows:

Saturday: July 12:
Everyone starts the ride at Walker, and ends at Muskegon. (Kent, Ottawa, and Muskegon counties)

Sunday: July 13:
The week-enders start at Muskegon, and go back to Walker for their finish; the remaining riders continue onto Rockford. (Muskegon, Ottawa, and Kent counties)

Monday: July 14:
The riders move from Rockford to Edmore. (Kent and Montcalm counties)

Tuesday: July 15:
The riders move from Edmore to Big Rapids. (Montcalm and Mecosta counties)

Wednesday: July 16:
The riders move from Big Rapids to Cadillac (Mecosta, Osceola, and Wexford counties)

Thursday: July 17:
The riders move from Cadillac to Traverse City. (Wexford and Grand Traverse Counties)

Friday: July 18:
Tour wraps up in the TC area with a loop around the Traverse City/Suttons Bay/Mission Point areas. (Grand Traverse and Leelanau Counties)

Our nets will run each day from about 7:30 or 8 a.m. until all riders are in camp for the day, which tends to be around 4 p.m., and maybe a bit later

on the longer days. Keep in mind, though, that the cyclists want to get most of their riding done during the earlier parts of the day when it's cooler.

Radio help will be needed at various SAGS, but in many other areas too. One such area is coordinating or providing transportation for broken down bikes, riders with minor injuries, or riders with more serious medical situations. We also will need help from those who can provide information on severe weather threats, and can answer questions about various local services or facilities that might be needed during the tour.

Anyone with a valid amateur radio license, and a willingness to help, will be welcomed.

Here is our repeater list for the tour. In all but one case, I have received official approvals from the respective repeater trustees regarding our repeater usage plans, and the one authorization still pending should be forthcoming later this week.:

Walker:
Primary? W8LRC 145.270?PL = 94.8
Secondary? W8DC 147.260?PL = 94.8
Tertiary W8HVG 147.16 IRA link?PL = 94.8

Muskegon:

Primary? K8WNJ 146.820?Pl = 94.8
Secondary? W8ZHO 146.940?PL = 94.8
Tertiary? W8HVG 145.33 IRA link repeater?PL = 94.8

Walker again (See above):

Rockford:

Primary? W8LRC 145.270?PL = 94.8
Secondary? W8DC 147.260?PL = 94.8
Tertiary? W8HVG 147.16 IRA link?PL = 94.8

Edmore:
Primary--WB8VWK 146.800?NO PL
Secondary? W8LRC 145.270?PL = 94.8

Big Rapids:

Primary? KB8QOI 146.740?no PL
Secondary? W8HVG 145.290 IRA link?PL = 94.8

Cadillac:

Primary?K8CAD 146.980?NO PL
Secondary? W8HVG 147.160 IRA link?PL = 103.5

Traverse City:

Primary-- W8SGR 146.86?NO PL
Secondary-- W8TVC 145.27 ?PL = 114.8
Tertiary?145.15 W8HVG IRA link?PL = 114.8

Sutton?s Bay/Mission Point:

Primary- W8TVT -146.660?Pl = 103.5
Secondary-- W8TCM 145.390?PL = 103.5

My suggestion would be that volunteers monitor the primary
repeater for each day, and we can coordinate specifics from there.

If you have any questions on any of the info presented here, or on what your
potential communications role could be, please contact me directly via
e-mail at:

tbehler@...

or via phone at:

(231) 592-9854

U.S. Consumer Product Safety Commission
Office of Information and Public Affairs
Washington, DC 20207

FOR IMMEDIATE RELEASE
July 2, 2008
Release #08-319

Firm's Recall Hotline: (800) 843-7422
CPSC Recall Hotline: (800) 638-2772
CPSC Media Contact: (301) 504-7908

RadioShack Recalls Power Supplies Due to Electrocution and Fire Hazards

WASHINGTON, D.C. - The U.S. Consumer Product Safety Commission, in cooperation with the firm named below, today announced a voluntary recall of the following consumer product. Consumers should stop using recalled products immediately unless otherwise instructed.

Name of Product: 13.8V DC Power Supplies

Units: About 160,000

Importer: RadioShack Corp., of Fort Worth, Texas

Hazard: The recalled power supplies are wired incorrectly, posing electrocution and fire hazards.

Incidents/Injuries: None reported.

Description: The recall involves RadioShack 13.8V DC Power Supplies, catalog numbers 22-507 and 22-508 with date codes from 08A04 through 01A08.

Date code format is MMAYY where MM is the month and YY is the year. The catalog number and date code are located on the back of the power supply. Power Supplies with a green dot on the product and the product's packaging have already been repaired and are not included in the recall.

Sold at: RadioShack stores nationwide from October 2004 through January 2008 for between $50 and $85.

Manufactured in: China

Remedy: Consumers should unplug the recalled power supply immediately and take it to any RadioShack store for a free repair. Registered owners of the recalled power supplies

will be mailed a notice.

Consumer Contact: For additional information, contact RadioShack at 800-843-7422 anytime,
or visit the firm's website at:

http://www.radioshack.com/recall

To see this recall on CPSC's web site, including pictures of the recalled products, please go to:

Nice article, which I first saw in the Kent County ARPSC reflector.....

When Networks Fail, Hams to the Rescue
08:36AM Friday Jul 04 2008
Tipped by n2jtx

User n2jtx writes in: "With the periodic reports on BPL and the usual "it's time for the hams to find something else to do", it is refreshing to see this article that talks about amateur radio operations and their role in communication in times of crisis." Whether it's a natural or man made disaster, ham operators usually come through in a crunch when traditional networks fail. The report highlights how hams work in conjunction with other volunteer groups such as the Military Affiliated Radio Stations (MARS) and Amateur Radio Emergency Service (ARES), both of which coordinate with state and local officials during emergencies.

1. 2007 & 2008 June Es Comparison
    Posted by: "Art Jackson" ka5dwi@sbcglobal.net ka5dwi
    Date: Sat Jul 5, 2008 9:31 am ((PDT))

Hi all,

I keep threatening to retire from PropNET, but Ev and Dave keep feeding me carrots (horse and buggy analogy) to keep me going.

Most of the hassle with doing propagation analysis is pulling the data together. Dave KF6XA, with the encouragement of Ev, has come up with an excellent routine to extract and calculate LiveX capture data.

Now I can analyze data much more correctly and quickly than I have in the past. I have updated in the "PropNET Studies Blog" a link to a June 2007 and 2008 Es Comparison. Although 10-Meter capture volumes are down, the simularity and consistency in the trends of year to year are not that different overall.

The blog link or use "Research" on the PropNET Homepage.
http://propnet-studies.blogspot.com/

The link to the report (for you Dave):
http://www.swotrc.net/PropNET/June07&08EsPropagation.pdf

Enjoy.. I really appreciate any comments.

If I can get back good feedback and consistent participation on 10 Meters I may do similar work for someone elses data.

(Reply only to k8je@...)

The GLD web site is totally revised and updated! You are invited to go to http://www.greatlakes.arrl.org to get a look at what webmeister Gary Osborne, W8XS has done.

The web site and how we plan to use it will continue to evolve. If you have suggestions of features you would like to see on the site, please let me know. Keep in mind that this is a Division site. The three Section web sites will continue to provide most of the coverage of Section information.

Thanks to W8XS for the fine work; work he has only just begun.

73,

Jim

4335. Response for help a little slow .... Help need for events in the City of Grand Haven - Sunday and Wed.

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-07-11 01:05:17 UTC
From: Don Meyer
Topic: 4335 Message: 4335

Hello Everyone ... I don't want to beat this event on to everyone but we have not had much response for help. This is a short event and what we have to help out with is all in the City. Public Safety Officers are at all the busy corners and we help out at some of the turns, hills,keeping track of the runners and some of the stop streets.

Please if you can help we need you ..... 73 Don Meyer-KB8ODB

Sunday July 13 2008 we need help with a triathlon in Grand
Haven we will meet at 7:00 am at the Grand Haven public safety parking lot
this event starts at 8:00 am and should last until 12:00 noon this event is shorter than last year with the removal of the half ironman event if you can help contact
Don Meyer kb8odb@sbcglobal. net 616-846-7307 or John Fisher at kc8uny@arrl. net thanks 73

We have also been asked to help out Wed July 16th in the evening with the Scott Flahive Memorial Cruise at 7pm. It starts at the Grand Haven Driftwood Inn on to US31 south and then back onto lakeshore and up sheldon street to downtown. We have been asked to help keep the cars in the cruise move through the 4 way stops and keep them moveing after the first car go's through .... We will be working with the GHPS and get to see the line up of classic cars .... Please let us know if you can help with this event...73 Don Meyer -KB8ODB

Donald Meyer - KB8ODB

Assistant Emergency Coordinator for Amateur Radio in Ottawa County

Golly Don... I would love to help, but I am working another radio event
that day... so many events come up on the same weekends in Summer
time it is hard to do them all.

Hopefully, next time! == GOOD LUCK - K8JHR ==

Tom,

It's reassuring to know we hams once again have the option, right here in West MI to visit, browse, and purchase Amateur Radio gear from a brick and motor store with stock on the shelves! I would hope that many locals hams will support your efforts, by buying, locally. It sounds smart to have diversified, by also having tool sales to help pay the rent.

My only suggestions would be to make sure you don't mimmic the reasons for the demise of that "other" local ham shop. Keeping RIDGID store hours of operation, consistent with WRITTEN hours of operation POSTED on the entry door is KEY to your success! With the gas prices what they are today, folks like me don't want to find themselves driving all the way from Kentwood to Muskegon, in the hopes of entering a friendly, knowledgable, positive buying environment, only to arrive finding a: "Be back in 15 minutes" sign on the door! Personally, I estimate I must have

driven to that other store and back, 10 times, before I finally found it to be open for business! And please, don't have your salespeople wear exposed sidearms on their person, like that other store! Just invest in security cameras, like everybody else. That's just wrong! There's something physchologically difficult about attempting to dicker on price, starring at an intimidating semi-automatic handgun on the store owners belt! It just makes you want to go home, read your free, thick-paged color catalog, call the toll-free phone number, order and confirm your item is currently in stock, read your card number to them, and receive the exact item you ordered , arrive in perfect condition, delivered to your front door by FedX.

I wish you success and good luck! Stay in the black, 73,

Gary Lauff KD8AZM

Here's a "digital" contest, featuring the oldest (radio) digital mode. I emphasize that this is the oldest radio digital mode, because semaphores and other digital modes were used in more ancient times. For example, the French had a telegraph system based on semaphores in the 1700's which could transmit messages from the mediterranean to the Atlantic coast within 30 minutes, Native Americans used smoke signals, etc.

Subject: 2008 Flight of the Bumblebees - July 27
Date: Thu, 17 Jul 2008 13:38:44 -0000
From: scott mcmullen <scottamcmullen@netscape.net>
To:

The 2008 running of the Adventure Radio Society's 'Flight of the Bumblebees' is approaching on July 27. So far, 143 intrepid QRP operators have signed up to hike, bicycle, or paddle to an operating position and participate in the event as Bumblebee stations.

Participation from home stations is also welcome and encouraged.

Group operation is welcome in the Flight of the Bumblebees. You may operate under a single call and report a single score, or under multiple calls and report multiple scores. In any event, you are limited to operating a single transmitter at a time.

Maximum power is five watts. We operate CW on 40, 20, 15 and 10 meters, on the standard QRP frequencies. Each contact will receive one point. The same station can be worked on different bands for additional QSO points and multipliers.

The rules in full, and details about soliciting a bee number, are available at:

http://arsqrp.pbwiki.com/Flight+of+the+Bumblebees

Hope to hear you on the air during the 2008 ARS QRP FoBB

4353. MAARC VENTURING CREW 9050 IS ACTIVATING SOUTH MANITOU ISLAND THIS WEEKEND

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-07-18 20:18:05 UTC
From: ravennaelectronics
Topic: 4353 Message: 4353

Hello everyone!
The first two waves of Venturing Crew 9050 have departed for South Manitou Island. Bill and Linda left a couple of days ago in their boat. Dan and Michelle are due to leave anytime now. Chuck, Karen and the youth depart at 5:30am Saturday.

Once they arrive on the island they will hike in all the gear, setup tent city, and then setup the field station.

Special event callsign: W8M

Frequencies:
BAND PHONE CW
80 Meters 3.690 / 3.940 LSB 3.570 MHz
40 Meters 7.190 / 7.270 LSB** 7.030 MHz
20 Meters 14.290 USB*** 14.060 MHz
Dan is going to try to stay as close to these as possible. There are several contests, other special events, and various nets going on. I will post the exact frequency on DXscape and here and update it as needed.

Hours of operation: Saturday afternoon through Sunday night. Possible Monday morning as well.

While everyone is enroute, they will be on the W8HVG Link system. Dan and Michelle are hauling most the gear in their vehicle. Dan's call sign is N8PPQ.

Karen is driving our mini-van with all the others. They are:
Karen, KD8DHJ
Chuck, KC8MDL
Kayla, KD8IVJ
Kyle, KD8HEM
Kathy, no callsign yet

Bill, AB8SC, and Linda, AB8QH, are on their boat and already headed up there.

Please listen in for all of them on the Linked system in case they experiense any trouble during commute and then make contact with them while they are on the island.

Thank you
Rich "Doc" Strait, AC8AL
Venturing Crew 9050 CC/CR

P.S.
I am staying home to watch the dogs. Can not afford to kennel them.
I can be reached at home if needed and by the 82 repeater.

4355. Help needed for Coast Guard events in Grand Haven

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-07-19 02:14:41 UTC
From: Don Meyer
Topic: 4355 Message: 4355

Hello Everyone ... Again this year it is time for Coast Guard week in Grand Haven and we have been asked to help out with events on Saturday July 26th and Saturday August 2nd. Both of these days we need a lot of hams to come out and help.

July 26th events start at 8:00 am and should be over by 12:00 noon
First there is the YMCA 5k and 10k runs which are throughout Grand Haven City.
We help keep track of the race, watch for medical?s and at some intersections light traffic direction.
Right after the runs we move to the Downtown area and help set barricades into place for the Grand Haven Coast Guard Family Parade, watch for medical?s and remove the barricades after the Parade.

August 2nd events start at 7:00 am and should be over by 4:00pm
First there breakfast provided by the Coast Guard committee at 7:00am (those that help out July 26th can come for breakfast also) at Russ?s in Grand Haven
Then we need a group of hams to help with parade line up starting at 8:00am in the area of the Grand Haven Middle school.
And the last item we helpout with is watching for medicals, lost children, and anyother things that may happen along the parade route. You are welcome to come and join us for breakfast or we will meet in the Grand Haven Public Service Parking lot at 10:30 for your assignment.

I also need someone to come in by 9:00 am to watch the GHPS parking lot so only cars with pass?s get in and let in the hams helping that need to park there.

If you can help out with any or all of these events please send me a email at: kb8odb@...
or call me at 616-846-7307
or contact John Fisher KC8UNY
jtlr.fisher@...

Helpers with the parade can come and meet at the GHPS station after the parade for lunch.

If you are coming to watch the parade and would like to help we need to get you a vest and know were you are going to be .... everyone is welcome to bring there family to watch the parade.

Thanks for all your help 73 Don KB8ODB

Climbers to get their day in the sun
NBC's "Dateline" to explore the perilous world of tower dogs on July 21

July 16, 2008 - NBC's "Dateline Presents" says it will take "a never-before-seen journey into the hazardous world of the tower climbers who work on the frontlines of America's high-tech communications system." The program, "Tower Dogs," will air on Monday, July 21 at 10:00 PM/ET.

The hour-long broadcast is expected to give an up close and personal no-holds-barred look at tower dogs' lives - up in the air and on the ground. "We experience their on-the-job tension and watch them work hard, play hard, and mourn when they lose one of their own," NBC said in a press release. In a twist on all the dangerous-job programs that solely feature males, typically narrated with muscular prose, "Tower Dogs" follows an unusual tower crew boss: a woman named Nikki Collins, a single mom, former cheerleader, and the person keeping her tough-guy charges in one piece. Although there has been a noted increase in tower construction company owners and climbers that are women (http://www.wirelessestimator.com/t_content.cfm?pagename=Women Climbers) , they are in a small minority in a predominately male profession.

The "Dateline" team worked for four months documenting this group of tower climbers as they worked their way through 40 towns and cities in 24 states. During this time there were seven fatalities nationwide, including five deaths in a 12-day period in April. Please see:
National exposure long overdue, say many (http://www.wirelessestimator.com/t_content.cfm?pagename=Tower Dogs)

From: ravennaelectronics
Topic: 4364 Message: 4364

Good day everyone. I spoke with the MAARC Venturing Crew 9050 this morning on 3.900Mhz.
Here are the freuqncies, +/- 10, that Dan and Chuck will do their best to stay near for those wishing to make contact.
3.900
7.250
14.240
18.160
If you do not hear them on one frequency, monitor one of the other ones.
They estimate they have made nearly 200 contacts. Chuck went to the ranger's station and asked for more paper as they had filled up what they brought.

They are running 50W to save on battery power now.

Best Regards,
Rich "Doc" AC8AL

Topic: 4365 Message: 4365

Anyone heard W8M on CW? I'm wondering if I should resurrect my antenna and work them? However, I'd have to find my microphone to work SSB, whereas my trusty key is always beside the rig.

The only CW frequency they list is 1404 MHz., which probably wouldn't work from SW Michigan. But, there's no 80/75 metre frequencies listed on the ARRL Special Events web site, so they probably have an expanded list. There's precious little on n8ppq's web site that I've been able to find, but I'm somewhat of a dunce when it comes to web surfing. I'd really appreciate a better list of frequencies and times.

Thanx 4 the info. If you, or anyone else, works them, please ask if they're going to be on the Corn Whiskey segments on 80 or 40 metres. They advertised a 14.04 MHz CW frequency, but that seems to have gone by the wayside. Besides, with current ionospheric conditions 20 metres wouldn't work.

And, please remind them to take lots of pictures - the general pictures on N8PPQ makes me wonder if that island might be a good place for a QRP Field Day some year. :)

4367. W8M EVENING UPDATE

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-07-21 02:59:51 UTC
From: ravennaelectronics
Topic: 4367 Message: 4367

Good evening everyone.
The W8M station is off the air for the rest of the night. Storms are rolling over the island right now. Bill said they are going to charge the deep cycle marine battery and be back on the air in the early morning. They are going to try to check into the Bathrobe Net too.

They will not be on the air long tomorrow morning. They need to have everything down, packed up, and be at the ranger's station by 10am just in case the boat leaves early.

I have heard them the best on 75M (3900MHz). I know the spent a lot of time on 14.247Mhz today and made many contacts there. I barely heard W8M there yet I heard the station they were talking to very well. Many stations were giving them 57 to 59+ signal reports.

They have made many contacts and had a great time.

If you have youth, ages 14-20, that you feel would like to join the crew or hear more about it, let the Karen our Crew Advsior know. Her email address is kd8dhj at arrl.net

Best Regards,
Rich "Doc" AC8AL

Subject: Windows HF DV programs pulled from distribution

I think D-STAR fans will be interested to note that the
Windows/sound-card based Digital Voice programs - WinDRM, DRMDV, FDMDV -
have been pulled from distribution. They are no longer available for
download. These programs were written by Cesko HB9TLK, and distributed
primarily by Jason N1SU through his web site.

The problem is licensing, or lack of it, for the MELP codec that all the
programs shared. The codec was developed for the US military and NASA,
but was never licensed for free distribution. Several companies share
the "IPR" (Intellectual Property Rights) for various forms of MELP. Some
of those companies do not permit unlicensed use.

MELP was designed for high quality, low data-rate voice communication,
and is particularly well suited for HF radio applications. WinDRM
occupies about 2.5 kHz of spectrum and sounds like FM with few artifacts
when signals are good. Cesko's newest program, FDMDV, used only 1.1 kHz
of spectrum. It sounds a little rougher, but still remarkable for that
low bandwidth. It works closer to the noise level, and has almost no
latency. All the programs use OFDM (multiple carrier) modulation schemes.

Some hams have been aware that MELP's legal status was murky at best.
Most users probably had no idea. One web site I read said that hams
were using a "pirated" copy of the MELP dll. I can't offer a legal
opinion, but it appears that use, not just distribution, of the MELP
codec violates the IPR license.

The AOR digital voice modems use the AMBE 2020 vocoder, and are not
affected by the MELP situation.

I don't know if any specific legal action or threat precipitated the
removal of the Windows programs (not just the codec) from distribution,
or if the hams involved just changed their minds on participation.

73,
Gary KN4AQ

4369. Byron Center Bank - 5k Benefit Run

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-07-21 20:20:12 UTC
From: Steve Vander Hill
Topic: 4369 Message: 4369

Hello, passing on a request from a friend of WMSAR, Rita Parnell.

Rita works for Byron Center Bank who is having a 5K benefit run this Saturday, she is looking for individuals that would be willing to work the event from 7:30am until 10:30am approximately. If you have a uniform please feel free to wear it to provide some great PR. Rita needs to know by Wednesday night if you would be willing to assist, so please drop me a email if interested.

The meeting place would be the Byron Center Bank at 2445 84th, Byron Center, at 7:30am, with t-shirts being given to those that come out to work. The work will be more of traffic control and security type versus communications.

Let me know, thanks.

4370. help need for coast guard run and festival second post

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-07-21 21:37:32 UTC
From: jtlr.fischer@sbcglobal.net
Topic: 4370 Message: 4370

July 26th events start at 8:00 am and should be over by 12:00 noon
First there is the YMCA 5k and 10k runs which are throughout Grand Haven City.
We help keep track of the race, watch for medical's and at some intersections light traffic direction.
Right after the runs we move to the Downtown area and help set barricades into place for the Grand Haven Coast Guard Family Parade, watch for medical's and remove the barricades after the Parade.

August 2nd events start at 7:00 am and should be over by 4:00pm
First there breakfast provided by the Coast Guard committee at 7:00am (those that help out July 26th can come for breakfast also) at Russ's in Grand Haven
Then we need a group of hams to help with parade line up starting at 8:00am in the area of the Grand Haven Middle school.
And the last item we helpout with is watching for medicals, lost children, and anyother things that may happen along the parade route. You are welcome to come and join us for breakfast or we will meet in the Grand Haven Public Service Parking lot at 10:30 for your assignment.

I also need someone to come in by 9:00 am to watch the GHPS parking lot so only cars with pass's get in and let in the hams helping that need to park there.

If you can help out with any or all of these events please send me a email at: kb8odb@...
or call me at 616-846-7307
or contact John Fisher KC8UNY
jtlr.fisher@...

Helpers with the parade can come and meet at the GHPS station after the parade for lunch.

If you are coming to watch the parade and would like to help we need to get you a vest and know were you are going to be .... everyone is welcome to bring there family to watch the parade.

Thanks for all your help 73 Don KB8ODB

4371. First Notice, Ohio QSO Party, August 23 2008

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-07-22 03:32:28 UTC
From: Hank Greeb
Topic: 4371 Message: 4371

Please put the Ohio QSO Party, August 23nd, 1600 thru August 24st 0359Z on your calendar for some Great fun! There's a QRP category, usually with some competition. In State and out of state competition, plaques and certificates.

for rules and other info see http://www.oqp.us

I'll be operating as W8W, from Williams County, in NW Ohio for the first 6 hours..... K8NQC will take over operation after that.

This can either be a "fun" contest for the casual op, or a cut-throat operation for the die-hard contester. Typically there's 200 or more entries, and more than 700 unique calls recorded during the event.

4373. Coast Guard Festival

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-07-25 14:10:08 UTC
From: Steve Vander Hill
Topic: 4373 Message: 4373

W. MI. HAM, the reason for the email is to ask you to strongly consider helping this year at one of the numerous events of the Coast Guard Festival being held in Grand Haven.

The Coast Guard Festival is a large festival and getting longer and larger each year. Such large annual highly attended events like the Tulip Time Festival are too large for just one Club or Organization to completely manage on their own. The Festival Club NOARC really needs your assistance in filling the spots in which amateur radio skills and equipment have been requested.

The festival events start today with tomorrow morning being the first event which calls for assistance from us HAMS. If you can help, even for a couple of hours, please contact Don Meyer at kb8odb@... or John Fischer at jtlr.fischer@... as soon as you can.

Thank you for your time and consideration!

4374. ARRL UHF Contest, August 2 - 3

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-07-26 19:16:49 UTC
From: Mark Thompson
Topic: 4374 Message: 4374

http://www.arrl.org/contests/rules/2008/uhf.html
2008 ARRL August UHF Contest Rules
General Rules
Rules – 2008 ARRL August UHF Contest
1. Object: To work as many amateur stations in as many 2 degrees by 1 degrees grid squares as possible using authorized amateur frequencies above 222 MHz and all authorized modes of emission.
2. Date and Contest Period: First full weekend of August. Begins 1800 UTC Saturday, ends 1800 UTC Sunday (August 2-3, 2008). Entrants may use as much of this time as they wish.
3. Entry Categories:
1. 3.1 Single Operator – Low Power
2. 3.2 Single Operator – High Power
3. 3.3. Rover: A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
1. 3.3.1.A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
2. 3.3.2. A rover may not operate with more than one call sign.
3. 3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
4. 3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
5. 3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
6. 3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
7. 3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
8. 3.3.8. A rover may not make more than 100 QSOs with any other one rover.
4. 3.4. Limited Rover. Same as the “Rover” class above, but competes with no more than any four bands of their own choosing. Output power limits shall be the same as those defined for the Single Operator Low Power category (3.1.1)
5. 3.5. Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
6. 3.4. Multioperator.
4. Exchange: Grid-square locator (see April 1994 QST, page 86 or www.arrl.org/locate/gridinto.html).
1. 4.1 Exchange of signal report is optional.

5. Scoring:
1. 5.1 QSO points:
1. 5.1.1 Count three points for each complete 222- or 432-MHz QSO.
2. 5.1.2 Count six points for each complete 902- or 1296-MHz QSO.
3. 5.1.3 Count 12 points for each 2.3-GHz (or higher) QSO.
2. 5.2 Multiplier: The total number of different grid squares worked per band. Each 2 degree by 1 degree grid square counts as one multiplier on each band it is worked.
3. 5.3 Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score. Example: W1AW works W3CCX in FN20 on 222, 432 and 1296 MHz. This gives W1AW 12 QSO points (3 + 3 + 6) and also three grid-square multipliers. Final score is 12 QSO points X 3 multipliers, or 36.
4. 5.4 Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
1. 5.4.1 Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Miscellaneous:
1. 6.1 Partial QSOs do not count. Both callsigns, full exchanges and acknowledgment must be sent and received.
2. 6.2 A transmitter, receiver or antenna used to contact one or more stations under one call sign may not be used subsequently during the contest period under any other call sign (with the exception of family stations). The intent of this rule is to accommodate family members who must share a rig, not to manufacture artificial contacts.
3. 6.3 All equipment and antennas used by entrants must be owned and operated by amateurs. Use of non-amateur owned gear is not prohibited, but use of such equipment places the entrant in a separate category, ineligible for awards.
4. 6.4 Contacts made by re-transmitting either or both stations, whether by satellite or terrestrial means, are prohibited. Frequencies regularly occupied by a repeater in a locality may not be used for contest work, even if the repeater is turned off.
7. Awards: Certificates will be awarded in the following categories:
1. 7.1 Top single-operator High and Low power score in each ARRL Division.
2. 7.2 Top single operator High and Low power score on each band (222, 432, 902, 1296 and 2304-and-up categories) in each ARRL Division where significant effort or competition is evidenced. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band achievement stickers.) For example, if W1AW has the highest single-operator multi-band score in the Atlantic Division and his 432-MHz score is higher than any other Atlantic Division single-operator’s, he will earn both a certificate for being the single-operator Division leader and an endorsement sticker for 432 MHz.
3. 7.3 Top multi-operator score in each ARRL Division where significant effort or competition is evidenced. (Multioperator entries are not eligible for single-band awards.) Additional certificates may be awarded where significant effort or competition is evidenced.
8. Submission: Deadline for submission of entries for this contest is 1800z Tuesday, September 6, 2008.
1. 8.1 Paper logs and properly completed summary sheets should be mailed to: August UHF Contest, ARRL. 225 Main Street, Newington, CT 06111.
2. 8.2 Cabrillo formatter logs should be emailed to AugustUHF@arrl.org
3. 8.3 Participants may submit using the Web Applet at www.b4h.net/cabforms .

4. 8.4 Entries postmarked or email dated after the deadline may only be considered checklogs.
9. Other: See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” November 2001 QST. These are also available at the Contest Branch Website at: http://www.arrl.org/contests .Questions regarding this contest should be emailed to contests@... . Only use the contest-name email for submission of entries. All contest forms and rules may be downloaded at: http://www.arrl.org/contests/forms/

From: Bill
Topic: 4376 Message: 4376

All:

For the upcoming MAARC's monthly meeting we will enjoy a program on antennas from our own Clarke, K8BP. Yes, the fabulously famous noted QST author will speak to our attending masses from his wealth of experience and knowledge. The last time he was the council's program we enjoyed a stimulating and enjoyable evening revolving around ham radio.

Related to the evening's program K8BP has donated an AEA IsoPole two-meter antenna. This lightly used and in new condition antenna will be auctioned to the highest bidder at the meeting.

Mark your calendar, set your alarm, and make a trip out to the Muskegon radio club's clubhouse at 2888 Scenic Drive between Muskegon and White Lakes. The program begins at 7:00 pm on August 7. There is plenty of parking and the air conditioner will be fired up and cooling down the assembled throng.

Will we see you there?

73

Bill, AB8SC

It takes a lot of hams to make the Grand parade work ...

please come out if you can ...

Hello Everyone ... Again this year it is time for Coast Guard week in Grand Haven and we have been asked to help out with events on Saturday July 26th and Saturday August 2nd. Both of these days we need a lot of hams to come out and help.

July 26th events start at 8:00 am and should be over by 12:00 noon
This event is over ... we could of used a couple of more people but we did it...

August 2nd events start at 7:00 am and should be over by 4:00pm
First there breakfast provided by the Coast Guard committee at 7:00am (those that help out July 26th can come for breakfast also) at Russ?s in Grand Haven
Then we need a group of hams to help with parade line up starting at 8:00am in the area of the Grand Haven Middle school.
And the last item we helpout with is watching for medicals, lost children, and anyother things that may happen along the parade route. You are welcome to come and join us for breakfast or we will meet in the Grand Haven Public Service Parking lot at 10:30 for your assignment.

I also need someone to come in by 9:00 am to watch the GHPS parking lot so only cars with pass?s get in and let in the hams helping that need to park there.

If you can help out with any or all of these events please send me a email at:
kb8odb@sbcglobal. net or call me at 616-846-7307
or contact John Fisher KC8UNY
jtlr.fisher@ sbcglobal. net

Helpers with the parade can come and meet at the GHPS station after the parade for lunch.

If you are coming to watch the parade and would like to help we need to get you a vest and know were you are going to be .... everyone is welcome to bring there family to watch the parade.

Thanks for all your help 73 Don KB8ODB

FYI. Is 3XY? a rare country? Thought some folks might be interested in this info.

73 de n8xx Hg

---------- Forwarded Message ----------

Hello to all,

I will be operating in KanKan, Guinea (Africa) from August 3rd to August 9th. My Guinea issued call is 3XY0D (three x-ray yankee zero delta)

Operating most on the higher bands of 20 / 17 / 15 meters, with some tries of 40 meters, all depending on conditions.

Operating times will be around 10:00 GMT (6:00 EST AM) to 11:00 GMT (7:00 EST AM)
Evenings are 23:00 hours GMT (7:00 EST PM) until bands or operator becomes too tired.

A Special QSL card will be made, upon my return for all contacts.
Hopefully a web site with pictures will be posted once I return.

Station will consist of a Kenwood TS-50S, operating with batteries and Solar array. Power output will be around 10 to 20 watts.
Antenna will be a vertical and 88 ft dipole fed with ladder line.
I will only be able to do the logs via paper.

John Grow VE2EQL/3XY0D

4384. Amateur Station at Smithsonian Going QRT after 32 Years

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-05 20:51:17 UTC
From: Ross
Topic: 4384 Message: 4384

After more than 30 years on the air from the nation's capital, the Amateur Radio station at the Smithsonian Institution's National Museum of American History, NN3SI, will become silent on Thursday, July 31. Originally located in the Nations of Nations exhibit, the station first went on-the-air in 1976 in celebration of the US Bicentennial. The FCC caught the patriotic spirit, giving the station a temporary call sign -- NN3SI -- standing for Nation of Nations, Smithsonian Institution. The Commission later made the call sign allocation permanent.

According to NN3SI volunteer Carl Lagoda, W3CL, a Special Event operation is planned for today and tomorrow, and certificates will be available to those who contact NN3SI. "We have only one station," Lagoda said, "but we may be found on one of the following frequencies, depending on conditions: 3.840 MHz, 7.240 MHz, 14.240 MHz, 21.340 MHz and 28.440 MHz, as well as 14.240+ PSK. We might do some CW operations on Thursday, probably on 20 meters. Due to circumstances, hours of operation will be uncertain, but we probably will start at about 1130 UTC on Wednesday and Thursday." QSL information can be found here.

NN3SI has been situated in several different exhibitions in the Museum; it was most recently housed in the former Information Age exhibit. This exhibit chronicled the birth and growth of the electronic information age -- from Samuel Morse's invention of a practical telegraph in the 1830s through the development of the telephone, radio, television and computer. The Museum has been closed since 2006 while undergoing a major renovation and is scheduled to reopen to the public this fall.

The station participated in many special events throughout its history. During the dedication of the World War II Memorial on the National Mall, station operators made many contacts and taught children visiting the Museum how to spell their names in Morse code. Over the years, operators at NN3SI -- who hailed from the District of Columbia, Maryland and Virginia (and the occasional guest operators from various parts of the globe) -- have logged contacts with amateurs in all parts of the world and with astronauts and cosmonauts in orbit. By operating the station, NN3SI ops promoted Amateur Radio as a national resource for emergency communications, trained operators, technicians and engineers -- as well as an outstanding hobby -- to the more than 4 million people who visit the Museum each year.

4388. MCECS Monthly Meeting Monday Aug 11 field station Demo

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-08 03:36:08 UTC
From: Jim KC8PCJ
Topic: 4388 Message: 4388

On Monday bring your field station to set up and show. We will be having a short general meeting and than proceed to a nearby park. Everyone that would like may set up there field station(large or small) as a show and tell is welcome to do so. Everyone will get to look at what others have done and share ideas. Last year we also made a few HF contacts. The idea is to share and learn from each others trials and errors. If weather is working against use we will try to find a park with a pavilion.

Don't have a field station make sure you come along anyway. It was a lot of fun. See you there.

September Training will be on using GPS devices.

73s.

4389. It's Perseid Meteor Shower Time Again--Peaks August 12

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-08 14:26:20 UTC
From: Hank Greeb
Topic: 4389 Message: 4389

Anyone in Western Michigan interested in meteor scatter propagation?
This should be of interest.
==========
Excerpt from Amateur Radio clothesline T Report 1617 - August 8, 2008

HAM RADIO IN SPACE: THE PERSEID METEOR SHOWER ON AUGUST 12

Meteor scatter enthusiasts attention. The annual Perseid meteor shower peaks on Tuesday, August 12th. The best time to see them and make contact by bouncing signals off their ionized tails is during the dark hours before dawn on Tuesday morning when forecasters expect 50 to 100 meteors per hour.

The source of the Perseids is Comet Swift-Tuttle, which has littered the August portion of Earth's orbit with space dust. The dusty zone is broad and Earth is already in its outskirts. As a result, even before the peak on August 12th, you may see some "early Perseids" streaking across the night sky. (VHF Reflector)

4390. Fwd: New Owosso, MI D-STAR Repeater

Owosso Michigan has a new d-star repeater up and running. W8SHI in shiawassee county is up and running since Wednesday August 6th. The only repeater opperational at this time is the 2 meter on 145.240 -600. We do not have the 440 freq allocation yet nor do we have the gateway up yet just W8SHI C port is going. If your in the area feel free to say hi.

Subject: [OCEC Leadership] O.C.E.C. Meeting - Thursday, August 14

Leadership Team, reference next week?s scheduled monthly O.C.E.C. meeting on the 14th, I will be in Detroit all next week taking part in a OSHA certification course therefore I will not be able to attend/lead the meeting on Thursday night.

Question to you Leaders, do you still want to hold the meeting, if so, who is willing to lead it?

Please advise, thanks!

4392. Ten Commandments of Electronic Safety

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-12 20:38:31 UTC
From: Ross
Topic: 4392 Message: 4392

Ten Commandants of Electronic Safety

I. Beware to the lighting that lurks in an un-discharged capacitor lest it cause thee to be bounded upon thy backside in a most ungentlemanly manner.
II. Cause thou the switch that supplies large quantities of juice to be opened and thus tagged, so thy days may be long on earth.
III. Prove to thyself that all circuits that radiate and upon which thou workest are grounded lest they lift thee to a high frequency potential and cause thee to radiate also.
IV. Take care that thou use the proper method when thou takest the measure of high voltage that it not incinerate both thee and the meter, for verily, though thou hast no account number and canst be easily replaced, the meter doth have such and shall bring great woe upon the supply department.
V. Tarry not amongst those who engage in intentional shocks, for they are surely unbelievers and not long for this world.
VI. Take care thou tamper not with interlocks and safety devices, for this shall incur the wrath of thy seniors, and unleash the fury of the safety officer down upon thy head and shoulders.
VII. Work not with energized equipment, for if thou dost, thy buddies will surely be buying beers without thee, and thy space at the bar will be filled with another.
VIII. Verily, verily I say unto thee: never service high-voltage equipment alone, for electric cooking is a slothful process, and thou mightest sizzle in thy own fat for hours before thy maker seeth fit to end thy misery, and draw thee into his fold.
IX. Trifle not with radioactive tubes and substances, lest thou commence to glow in the darkness like unto a lightning bug.
X. Commit thou to memory the work of thy prophets, which are written in the instruction books: they give thee the straight dope and steer thee away from error.

4393. IEEE Symposium open to area hams

From: ARRL MI Section <memberlist@...>
To:

August 14, 2008

ARRL Mi Section & Great Lakes Division:

We cordially invite all ARRL members in the Michigan Section and Great Lakes Division to take part in the 2008 IEEE International Symposium on Electromagnetic Compatibility as a guest at one, or more, of our Amateur Radio related events. The Symposium will be held August 18 22, 2008, in Detroit, Michigan, at Cobo Center. Simply "register" as an "Exhibits only" (FREE) participant, and explore all the exhibits and demonstrations the Symposium has to offer.

As part of our Symposium, we are hosting an Amateur Radio Station to be operated by members of the Motor City Radio Club (MCRC). This station will be prominently located in the exhibit hall and should generate much interest in Amateur Radio and in the equipment used by Hams in their hobby.

In addition to the station several other related Amateur Radio activities are planned for the Symposium. In total they are:
Operating Station SSB / FM / CW Amateur Radio Examination (Th. 9-12)
Amateur Radio Luncheon (Wed: BYO)
Amateur Radio Message Service
Repeater "talk in service"
Visiting operator opportunity.

Ed Hare (W1RFI) of the American Radio Relay League (ARRL), primary editor for the ARRL publication "Radio Frequency Interference" will be with us as part of our Symposium, and to assist with the station. Ed has long been the liaison between the ARRL and the EMC Society and a strong supporter of RFI (EMC) concerns among the Amateur Radio community. We are very glad to have Ed's participation and support for this event. www.emc2008.org.

Sent: Friday, August 15, 2008 10:32:00 PM
Subject: [PSK_VHF_UHF_HAMRADIO] PSK from IEEE special event station in Detroit

I will be trying PSK from the IEEE EMC convention at special event
station W8MRM on 144.200 and 144.260 and 432.100.

I will be monitoring these frequencies from 8am to 4:30pm Tuesday
and Wednesday.

The station is has only a vertical on the roof of Cobo Hall for
all the VHF/UHF activities. The antenna is up at roughly 85 feet
about ground level here, so I should be able to make a few contacts
if anyone is out there.

We will also be trying PSK on HF probably around lunchtime these two
days also.

James W8ISS

Are you in the shack? If so why not try some digital mode contacts to Hams around you (check he database)...also try some DX Meteor Scatter WSJT contacts if the band is open or not.....

http://www.pingjockey.net/cgi-bin/pingtalk

http://groups.yahoo.com/group/PSK_VHF_UHF_HAMRADIO/database

Any ideas to better the group? Need information or help or do you have information for the group..please feel free to Post a "Message"

4395. GMARC Picnic - August 23

The ARRL/TAPR DCC (Digital Communications Conference) is being held in Chicago on September 26 - 28, 2008.

The DCC will be at the Elk Grove Village Holiday Inn located in Chicago's northwest suburbs near O'Hare airport with a free airport to hotel shuttle and easily accessible from major interstate highways.

The DCC is the premiere, national, annual digital ham radio conference covering ALL the Digital Voice & Data technologies from HF to Microwaves.

There will be BOTH Technical & Introductory presentations covering all levels of experience with the digital modes and also an ARRL forum.

This year for the first time at the DCC there will be a D-STAR Friday Night event. We plan to have innovators, pioneers & leaders in D-STAR digital voice & data technology available to present and take your questions.

Icom will be at the DCC and TAPR plans to have it's 70cm & 23cm D-STAR digital voice & data repeaters operating at the DCC connected to the internet gateway.

You can get more information about the DCC at: http://www.tapr.org/dcc.html
A DCC advertisement is attached that can be published in your local club newsletters.

Reigster before September 1st & save $10 on your registration fee.

You can register at:
https://www.tapr.org/dccregistration.php
Look forward to seeing everyone at the DCC.

4398. Ohio QSO Party, Saturday, August 23

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-21 21:14:02 UTC
From: Hank Greeb
Topic: 4398 Message: 4398

Please look for W8W, WILLiams county, where N8XX will be 2nd operator of K8NQC's station in Montpelier, Williams County, Ohio. We will be operating Multi Operator Single Rig, both phone and CW.

The Ohio QSO Party is held on the fourth Saturday of August, this year on August 23rd, from noon to midnight. Both CW and Phone (Usually SSB) are encouraged. Out of State stations try to work as many Ohio Counties as possible on 80 through 10 metres

Suggested frequencies are:

Band CW (MHz) Phone (MHz)
80 3.545 3.825
40 7.045 7.200
20 14.045 14.250
15 21.045 21.300
10 28.045 28.450

Note that multipliers are per mode, i.e., it is possible for an out of state station to garner 176 multipliers - 88 counties CW, 88 counties Phone.

For full rules and suggestions on maximizing scores, etc., see http://www.oqp.us

Hope to work y'all on Saturday.

73 de n8xx Hg

A few weeks ago I remember a message from one of the local reflectors that I subscribe to regarding a callsign lookup page that works with mobile phones, pda's etc. Well, my windows mobile pda crashed and I lost both the email and the bookmark to actual URL. I also can't remember which reflector that it came through. I did try crawling through the past messages on several of the groups, but can't seem to locate it. Any of you guys out there happen to know what I'm talking about, or still have the URL noted somewhere?

Any help is appreciated.

Also, interested in any windows mobile compatible ham software out there too. If you know of anything 'neat' I'd be interested in checking it out.

4411. Are You a New Ham? You're Invited!

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-26 13:02:20 UTC
From: Bill
Topic: 4411 Message: 4411

Are you a new ham? Wondering what's up? Why?

We've got the answer. You need a little assistance, perhaps an Elmer, and a reason. The Muskegon Area Amateur Radio Council wants to help you right the situation. We're hosting an event specifically tailored to you and our wonderful hobby. Yes!

Saturday, September 13 we are inviting you to a foxhunt and new ham orientation. The day starts at noon with some basic instruction, explanation of the basic rules, and hardware check. Then we will go out and chase the fox. Yep, a transceiver hunt for the hams in our community. It all begins and ends at the MAARC's clubhouse on Scenic Drive between Muskegon and White Lakes and over by Lake Michigan. Fun!

You need to bring along that spiffy new HT and any auxiliary antenna you might have available. Or just yourself. We'll have lots of information, tips, and suggestions. We will team up with other hams of varying experience. Did I mention this will be great fun?!

Following the random and reasoned wandering around northern Muskegon County we will return to the clubhouse for a wonderful time of story telling, reliving of heroics, and a Steak Dinner. Yep, a steak, baked potato, salad, and great friends. I bet you can't beat that offer on any other Saturday.

Bring a friend, ham or otherwise. Bring a sense of adventure. Bring your questions. Bring a few bucks for dinner.

Mark your calendar, set the alarm, and we'll have fun! Experienced amateur radio operators are also encouraged and invited. This will be fun for everyone.

See you there? We hope so!

Bill, AB8SC
MAARC guy

4412. Status - Ken Groom ZR5AAD

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-26 15:51:47 UTC
From: Steve Vander Hill
Topic: 4412 Message: 4412

Regrettably I?ve been asked to share this somber news regarding our dear friend Ken Groom ZR5AAD.

Sunday night Ken experienced a major stroke. It was discovered yesterday that the cause of the stroke was a large malignant brain tumor. Ken?s condition is terminal, with the doctors describing Ken?s remaining time as ?short term?.

Chuck & Sherry Krueger, the family that Ken has been living with have and Ken?s medical care leaders have asked the following:

? Cards to be send to Ken Groom, c/o Holland Hospital, Room 506. Ken loves receiving cards.
? If you plan on visiting, PLEASE keep visits to a ?very minimum? due to visits tire out Ken very fast. If you plan on visiting, do not automatically go into his room, check in at the nurse?s station first to see if visitors are currently being allowed into Ken?s room.
? There is a possibility in the next day or so that a biopsy surgery will be performed on the brain tumor, if this occurs, no visitors will be allowed during recovery.
? Ken?s updates will come from Chuck & Sherry to Sindee Maxwell of the American Red Cross of Ottawa County, and to myself. The Kruger?s will provide us with what information or requests that they would like shared at that time.

Creating a bank account is currently being looked into to allow donations to be accepted. If this occurs the account information will be shared as soon as possible. Please feel free to share this email with anyone that might know Ken, thank you!

Please keep Ken in your prayers as he goes through this stage in his life, plus please also keep the Krueger?s in your prayers as they manage Ken?s affairs.

Best regards,

Steve

4413. Labor Day Sprint - Monday 1 Sep 08 Local (US) time

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-26 19:59:40 UTC
From: Hank Greeb
Topic: 4413 Message: 4413

Please join the Michigan QRP Club on their Labor Day Sprint

Time: 23:00::00Z Monday September 1, 2008 until
02:59::59Z Tuesday, September 2, 2008
(That's 7 p.m. to 11 p.m. EDT. or
(6 p.m. to 10 p.m. CDT. or
(5 p.m. to 9 p.m. MDT. or
(4 p.m. to 9 p.m. PDT. for those who have difficulty
figuring out the times zones in these Colonies.)

Details: Annual Labor Day Sprint - See
http://www.miqrp.org/contest.html for details

For the extreme QRPers there are categories of power starting at 250 milliwatts or less, another 250 milliwatts to one watt, another for 1 to 5 watts, and another for anything over 5 watts. So, all operators are welcome, from a few milliwatts up to and including a full gallon. Please join the fray!

Note that logs should be sent to n8xx QTHR. I apologize for not getting the results posted for the past two contests. I'll try to get the results of this contest out within a couple weeks of the final submission date.

4414. Donations - Ken Groom ZR5AAD

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-26 21:32:05 UTC
From: Steve Vander Hill
Topic: 4414 Message: 4414

To assist Ken Groom ZR5AAD with his expenses a donation account has been setup at Macatawa Bank.

The name of the account is: ?Ken Groom (ZR5AAD) Medical Donation Account?.

Donations can be made at any Macatawa Bank branch office simply by stating to a teller that you want to make a donation to the Ken Groom (ZR5AAD) Medical Donation Account. The tellers are aware of the account via the bank ?s intranet.

If one wants to wire in a donation, the name of the bank is Macatawa Bank, the routing number is 072413845, and the account number is 27018922.

Please continue to keep Ken in your prayers as he goes through these final stages in his life; also please keep the Krueger?s in your prayers as they continue to manage Ken?s affairs.

Cards can be send to attention of Ken Groom c/o Holland Hospital, Room 506.

If you plan on making a hospital visit, PLEASE keep the visits ?very short? due to the visits wear Ken down fast. You will see a notice on his room door that only two are allowed in his room at the same time, and for a very short time. Please respect these visitation requests.

The Michigan State Police - Emergency Management & Homeland Security Training Center (EMHSTC) is pleased to announce the FY 2009 Training Course Information is currently available online at www.michigan.gov/emhsd-training. Many new courses have been added to the schedule in addition to our core curriculum. Registrations are now being accepted for all of these training courses.

Additional information regarding the training courses can be found on our website. Please add our website to your list of Favorites for future reference.

If you have any questions please call 517-322-6515 or e-mail schneids@....

Thank you for your continued support of the MSP-EMHSTC and we look forward to meeting your training needs for FY 2009!

4416. still need a tower.

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-27 04:38:01 UTC
From: Mark Strait
Topic: 4399 Message: 4416

While taking a load of scrap metal to the scrap yard on Ottawa Street in Muskegon, We saw a truck pull in with what appeared to be 2 towers. We also saw several tri-pods and other towers inside the scrap yard.
Might be worth looking into.

I am also now in the market for a small tower. Would love a crank up (freestanding maybe) of 40-50 feet in very good to excellent condition. HF beam and rotor and all, too. And all within a short drive from Grand Haven.

Am I dreaming?

Mark, KE8FO

4417. New HF Digital Protocol to Debut at DCC in Chicago, September 26 - 28, 2008

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-27 14:22:49 UTC
From: Mark Thompson
Topic: 4417 Message: 4417
Attachments: 1 described; binary payloads are missing from this source WARC

http://www.arrl.org/news/stories/2008/08/26/10284/?nc=1

New HF Digital Protocol to Debut at DCC
WINMOR, an HF digital protocol designed for use with the Winlink 2000 network, will be unveiled at the upcoming ARRL/TAPR Digital Communications Conference in Chicago, September 26-28. http://www.tapr.org/dcc.html
According to developer Rick Muething, KN6KB, WINMOR will effectively eliminate the need for external PACTOR hardware. "This new protocol is implemented through a Windows application that uses a computer sound card for all the analog-to-digital conversion. It provides error-free ARQ transfers within 200, 500 or 2000 Hz bandwidths," Muething said.
In terms of throughput, Muething said that the 200-Hz WINMOR mode appears to equal the performance of PACTOR I. In WINMOR's 2000 Hz mode, its performance rivals PACTOR III.
"WINMOR is a work in progress," Muething said. "We won't be pulling the wraps off a finished application at the conference. We're close, though. I'd like to see on-air testing in 3 to 6 months."
Conference information and registration is available onlinehttp://www.tapr.org/dcc.html or by telephone at 972-671-8277. Rick Muething's presentation paper, WINMOR. . . A Sound Card ARQ Mode for Winlink HF Digital Messaging, is included in the conference proceedings. Proceedings will also be available for sale on the ARRL Web after the conference.

4418. Notice to all radio amateurs in IARU Region 2

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-27 15:45:00 UTC
From: Hank Greeb
Topic: 4418 Message: 4418

There will probably be an ARRL bulletin to this effect, or I might have even missed one, but, nevertheless, it's worth a reminder or two

Hurricane Gustav - Notice to all radio amateurs in IARU Region 2

Hurricane Gustav is currently making its way through the central part of the Caribbean basin and has passed through Dominican Republic and Haiti and will be affecting the island of Cuba in the next few hours.

It has been requested that IARU R2 member societies remind their members to be aware of emergency communications that may occur in that region, and to keep those frequencies clear for emergency traffic. This message does not indicate any particular frequencies that may be used for this purpose.

73,
Vernon - VE2MBS

4419. UPDATE - Ken Groom ZR5AAD

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-27 21:35:18 UTC
From: Tom VanderMel KB8VEE
Topic: 4419 Message: 4419

Sent: Wednesday, August 27, 2008 4:47 PM
Subject: UPDATE - Ken Groom ZR5AAD

Ken has mentally improved significantly today. For the first time, he comprehends what his medical condition is and has accepted it.

Ken decided to have the doctors perform the biopsy. He wants to be absolutely sure what the tumor is. The biopsy is scheduled for tomorrow, Aug 27, at 12PM.

Because of that, we respectfully request No Visitations tomorrow. I will email the results as soon as I can.

Ken has been accepted by Hospice of Holland will be staying at the Hospice House. He will be moved there as soon as he is discharged from the hospital. It is located at the corner of 104th st. and Mason (24th) St.

If someone could please post this message on the area reflectors for me that would be appreciated due to I'm working through my work email, thank you

To: Steve Vander Hill
Subject: Re: Ken's status?

Steve,

The initial results from the biopsy confirmed the original diagnosis. The full test results from the pathologist will take a day or two. he is currently under monitoring, as a precaution.

Sometime tomorrow, he should be moved to a new room and then he will be able to have visitors again. That will probably happen in the late Am or early PM.

Anyone coming to visit should check at the information desk for the current room number.

4426. How to communicate into/out of a Disaster Area

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-08-29 18:54:56 UTC
From: Hank Greeb
Topic: 4426 Message: 4426

People are already getting ready for Hurricane Gustav, expected to hit the continental Untied States sometime early next week.

Here's a "word to the wise" on getting H&W inquiries into a disaster area. My father was in Los Angeles in 1973 when an earthquake hit. I couldn't get through on the telephone, because all circuit were tied up. And, of course, he didn't think of calling to let us know his situation nor his whereabouts. Telephone lines were clogged into the area for days.

I took a hint from previous experiences in disasters, and called him at about 5 a.m. our time - 2 a.m. Pacific time. I woke him up, but he was glad to know that his progeny were worried about him, and we were relieved to know he was okay. He was one of the 99.9% of people in the disaster area who were not affected, except that he didn't have power for a day or two.

In case of a widespread disaster caused by a major hurricane, this may not work because people are likely to be evacuated, telephone lines may be down, etc. But it might be wise to talk with your loved ones in the areas which may be affected, and ask them to call out when they get a chance. And, advise them that you'll accept a call in the middle of the night, when cell phone and land lines are more likely to be open in the affected areas.

When folks as me to get in touch with someone in the disaster area, I often counsel them to call at a weird hour - and many time this works. If they insist, I get the phone number, and will make the call myself. It's rare that I get chastised for waking someone up at 4 a.m. or thereabouts after I explain the purpose of my call.

4427. Tower regulations in Grand Haven Township

Yahoo group: WestMichiganHams (2006 — 2008)

From: ke8fo
Topic: 4427 Message: 4427

Has anyone been involved in putting up a tower in Grand Haven Township?

I found the ordinance on the township's Web site, and it appears to have a 35-foot height limit. That's ridiculous. But there is a provision in the ordinance's "exceptions" that states height limits "shall not apply to ... wireless transmission or reception towers..."

I plan to call the Township Hall next week to clarify this and find out the permit process, as I plan on putting up a 40-50 foot high tower in the near future.

Thanks for your help!

Wow. You guys are advocating that I break the law? Hi hi.

I'd just cry if I put up 50 feet and the building inspector comes along (I've got a real pr##k of a neighbor --- and it's not like a tower is hidden) and tells me to take it down.

KE8FO de n8xx

The Grand Haven Township Commissioners certainly have not been apprised of the provisions of the Federal PRB-1 which supersedes local zoning ordinances. Many (most?) of the governing bodies of townships, cities, and counties have regulations which exempt amateur radio towers up to 70 or 100 feet. See Courtland Township (Kent County) for example.

If you run into a buzz saw of bureaucracy, I'll be happy to help with educating the township. We succeeded in getting the regulations changed in the township in Ohio where I lived until November 2005 - they had a similar regulation, and we convinced them that they didn't want a challenge in court, because of the preponderance of court cases favoring antennas up to 100 feet. Note that I'm not proposing a lawsuit, gentle, respectful persuasion usually works. From previous work in this area I have a fairly extensive bibliography of court cases.

A word of caution, someone mentioned that it is better to beg forgiveness than to seek permission. This can be costly, and lead to a poor image of amateur radio in a locality. There was a fellow in Northwest Ohio who put up several towers without building permits, greatly exceeding height restrictions in his township. After almost a year of wrangling with the township officials, he had to take his towers down. I moved to Michigan and lost track of whether he ever obtained permission.

I suggest you go to the township zoning administrator with a copy of PRB-1 in hand, explain the situation in a calm, rational manner, and see what he says. If he doesn't agree, and he may not think he has the authority to waive the zoning regs, I'd NOT go to the zoning board of appeals (ZBA), but instead go to the Township Supervisor and the Board of Trustees, and ask that PRB-1 be reviewed by the town legal counsel. If you go to the ZBA you'll probably pay $200 or more for a hearing, which should not be necessary.

Good luck in your endeavor.

IMO you should familiarize yourself with the ordinance so you know the answers before you ask the zoning officer. As to the advice "forgiveness is easier than permission", it only take one neighbor down the street or official on the township board to create problems. If the ordinance allows towers, pay for the permit, jump the hoop, then no worries.

It would be nice if someone here could give Mark a legal and realistic answer as far as Grand Haven is concerned

September 2, 2008
Update on Ken from Sherry.

Although prognosis has not change, I got to say it's been the first time since last Saturday that I have felt joy in my heart. I'm going to be pretty blunt here. I pray to God that if he takes Ken home it's with peace and love but I am open to miracles too. Got to flexible whenever possible.

But, on to today.....Ken was up and eating a good breakfast at Hospice of Holland (food IS terrific as I had had it myself). I spent some time reading some of the blogs letters to him. Slowly...especially the ham call letters of people because they do not trip easily off my tongue. He thoroughly enjoyed the thoughts and prayers of everyone and, I think I can say, it's beginning to sink in how MANY people are thinking of him. He's in awe and so am I. The man has walked around the world in many ways and touched lot of lives. Keep the blog & prayers coming. After a morning nap & few visitors he suggest we get outside and I wheeled him around the outside gardens. We had more company in the afternoon, another nap (me too then) and later dinner (yeah...and more visitors.....) I shares some stories with his friends of Ken's stories he's told me too. This even after dinner a few ham friends came and put him on the air for a few minutes so he could hear others and maybe say a few words. (I had also brought his ham radio in to have close to him.) I got to say, when I left he was very tired, but his face was glowing. --- Our sincere thanks for everyone's help. - Hugs & Hugs
Sherry

Reminder GRAHamfest 2ØØ8 (Grand Rapids Area Hamfest) is this Saturday, September 6, Kent County Fairgrounds, Lowell, 15 miles east of Grand Rapids.

http://www.grahamfest.org

We are no longer accepting table reservations, but if you want to sell inside, bring your own tables. Or set up outside trunk sales. There is no charge for your own tables or trunk sales, although ticket purchase is required unless your a K-12 student.
The weather prediction for Saturday from the Weather Channel http://www.weather .com "A few clouds. Highs in the mid 70s and lows in the mid 50s.". Not that the threat of rain would have stopped any of us, right? RIGHT?

Cost of gas got you down? Try car pooling!

4441. American Red Cross Clarifies Amateur Radio Policy

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-04 19:20:52 UTC
From: Mark Thompson
Topic: 4441 Message: 4441

http://www.arrl.org/news/stories/2008/09/04/10314/?nc=1
American Red Cross Clarifies Amateur Radio Policy
On September 3, the American Red Cross released a statement to clarify their policy as it concerns Amateur Radio operators. The letter below from American Red Cross Disaster Service Technology Manager Keith Robertory, KG4UIR, is presented in its entirety:

There has recently been some posting on amateur radio discussion groups on the Internet that is carrying false or misleading information. The Red Cross does not have a policy against amateur radio participating in passing health and welfare messages. In fact, we recognize the importance of amateur radio in being a vital method for people to get registered.

The American Red Cross welcomes the support of Amateur Radio Operators in connecting friends and family members together through our health and welfare programs. The grassroots, independent nature of Amateur Radio Operators in communities around the country make them well suited for this task.

General welfare messages are processed through the Red Cross Safe and Well web site. This site allows people to register their status which can be checked by friends and family who search by your name, address or phone number. A quick look at the website disastersafe.redcross.org will show how both the registration process and search are done.

As few as two hams can setup an effective registration process. A ham located in the disaster zone can use any mode to transmit the basic Safe and Well registration information to another ham located outside the disaster who would enter the information on the web site. This quick ad-hoc setup doesn't rely on any affiliations and can be established by a call out to another ham who can help.

The Red Cross also processes welfare inquiry messages that contain specific medical information. These contain more sensitive and personally identifiable information at the same time that the Red Cross keeps confidential to respect client privacy. We are researching if and how these messages can be passed across open frequencies, and what federal restrictions (such as HIPPA) may be impact how this is done.

Thank you,
Keith Robertory
Disaster Service Technology Manager, American Red Cross
KG4UIR

4442. September VHF QSO Party, September 13 - 14

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-05 02:47:24 UTC
From: Mark Thompson
Topic: 4442 Message: 4442
Attachments: 1 described; binary payloads are missing from this source WARC

http://www.arrl.org/contests/rules/2008/sepvhf.html

2008 September VHF QSO Party Rules
General Rules
1. Object: To work as many amateur stations in as many different 2 degrees X 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The second full weekend of September. Begins 1800 UTC Saturday and ends 0300 UTC Monday (September 13 - 15, 2008).
3. Entry Categories:
1. 3.1. Single Operator.
1. 3.1.1. Low Power
2. 3.1.2. High Power
2. 3.2. Single Operator Portable.
3. 3.3. Rover. A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
1. 3.3.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
2. 3.3.2. A rover may not operate with more than one call sign.
3. 3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
4. 3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
5. 3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
6. 3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
7. 3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
8. 3.3.8. A rover may not make more than 100 QSOs with any other one rover.
4. 3.4. Limited Rover. Same as the “Rover” class above, but competes with no more than any four bands of their own choosing. Output power limits shall be the same as those defined for the Single Operator Low Power category.
5. 3.5 Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
1. 3.5.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.

Please see “General Rules For All ARRL Contests Above 30 MHz” for more information on the Rover categories.
6. 3.6. Multioperator:
1. 3.6.1. Multioperator (Unlimited): Stations submit logs with more than four bands used.
2. 3.6.2. Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
1. 4.1. Exchange of grid square is required. Exchange of signal report is optional.
5. Scoring:
1. 5.1. QSO points:
1. 5.1.1. Count one point for each complete 50- or 144-MHz QSO.
2. 5.1.2. Count two points for each 222- or 432-MHz QSO.
3. 5.1.3. Count three points for each 902- or 1296-MHz QSO.
4. 5.1.4. Count four points for each 2.3-GHz (or higher) QSO.
2. 5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees X 1 degree grid square counts as one multiplier on each band it is worked.
3. 5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
4. 5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
1. 5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
2. 5.4.2. Rovers who submit scores for the club competition must submit a separate summary sheet and log indicating QSOs and scoreif they make any contacts from outside of the club territory. The summary sheet should be clearly marked “for club competition only” and must be emailed separately to contests@...
6. Miscellaneous:
1. 6.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
2. 6.2. Only one signal per band (6, 2, 1 1/4, etc) at any given time is permitted, regardless of mode.
3. 6.3. Multioperator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
7. Awards:
1. 7.1. Certificates will be awarded in the following categories.
1. 7.1.1. Top Single Operator High and Single Operator Low power in each ARRL/RAC Section.
2. 7.1.2. Top Single Operator High and Single Operator Low power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator low-power all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
3. 7.1.3. Top Single Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator Portable entries are not eligible for single-band

awards.)
4. 7.1.4. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
5. 7.1.5. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.) Top limited multi-operator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multi-operator entries are not eligible for single-band awards.)
6. 7.1.6. Top scoring club in each club competition category will be awarded a gavel. See “General Rules for all ARRL Contests” for club competition information.
8. Submission:
1. 8.1. All submissions must be emailed to SeptemberVHF@... or postmarked no later than 0300z Tuesday, October 14, 2008. Paper logs should be mailed to Sept VHF QSO Party, ARRL Contest Branch, 225 Main St, Newington, CT 06111. Logs mailed or emailed after the submission deadline may be designated as check logs.
2. 8.2. Stations that use computers to log must send the electronic log in the Cabrillo file format for entry into the results. Submitted electronic files must be in ASCII / text readable format. A paper printout of an electronically created log is not an acceptable substitute for the required log file.
3. 8.3. Electronically submitted entries are considered signed.
4. 8.4. Logs may be submitted via the special web applet at www.b4h.net/cabforms
5. 8.5. All paper entries must include a fully completed summary sheet and a complete log of the contacts made.
9. Other:
1. 9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” November 2001 QST or at the Contest Branch Website at: http://www.arrl.org/contests
1. 9.1.1 For queries contact contests@... or (860) 594-0295.
2. 9.2. Forms may be obtained by:
1. 9.2.1. Downloading from the Internet at the Contest Branch Website: http://www.arrl.org/contests/forms.
2. 9.2.2. Sending an SASE to September VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.

At the request of the Hospice nursing staff, visiting hours will be limited to the following schedule:

8:30 - 10:00 AM

3:00 - 5:30 PM

7:00 - 8:00 PM

All visits will be limited to a maximum of 10 min.

The nursing staff felt that his fatigue was due to too many visitors and not enough rest. So we will try this schedule and see if it helps. Sherry is still sharing emails, blogs and cards with him.

Thanks for your assistance and support.
--
Chuck and Sherry

The one thing which is always stressed in a disaster situation is that a volunteer should register with a serving agency, rather than "self actuation" or trying to get inside a disaster area as an individual.

It is always wise to get registered prior to a disaster, though in preparation for possible mayhem from Hurricane Gustav the Red Cross was offering "crash courses" toward becoming a qualified volunteer. It is unclear how many of those volunteers were actually needed for this event. However, the next one could be "the big one" so volunteering won't be fruitless.

> American Red Cross Clarifies Amateur Radio Policy
> On September 3, the American Red Cross released a statement to clarify their policy as it concerns Amateur Radio operators. The letter below from American Red Cross Disaster Service Technology Manager Keith Robertory, KG4UIR, is presented in its entirety:
>
> There has recently been some posting on amateur radio discussion groups on the Internet that is carrying false or misleading information. The Red Cross does not have a policy against amateur radio participating in passing health and welfare messages. In fact, we recognize the importance of amateur radio in being a vital method for people to get registered.
>
> The American Red Cross welcomes the support of Amateur Radio Operators in connecting friends and family members together through our health and welfare programs. The grassroots, independent nature of Amateur Radio Operators in communities around the country make them well suited for this task.
>
> General welfare messages are processed through the Red Cross Safe and Well web site. This site allows people to register their status which can be checked by friends and family who search by your name, address or phone number. A quick look at the website disastersafe.redcross.org will show how both the registration process and search are done.
>
> As few as two hams can setup an effective registration process. A ham located in the disaster zone can use any mode to transmit the basic Safe and Well registration information to another ham located outside the disaster who would enter the information on the web site. This quick ad-hoc setup doesn't rely on any affiliations and can be established by a call out to another ham who can help.
>

> The Red Cross also processes welfare inquiry messages that contain specific medical information. These contain more sensitive and personally identifiable information at the same time that the Red Cross keeps confidential to respect client privacy. We are researching if and how these messages can be passed across open frequencies, and what federal restrictions (such as HIPPA) may be impact how this is done.
>
> Thank you,
> Keith Robertory

Am I the only one who thinks this is a subtle, but decidedly negative, comment on Ham radio? My first impression was that the Red Cross does not see a big need for ham radio operators in a disaster situation, and that other means of information exchange, ?la the Internet, are more desirable, maybe preferred because of "privacy" concerns.

That last paragraph about the HIPPA and privacy is ludicrous. Picture this = Some guy's house is blown to smithereens, his town wiped off the map, he has been evacuated to another state, and he has a medical problem that needs attention right now. So, ...like he's going to sue everybody for passing his medical information over a ham radio frequency in order to get the medication he needs? If that happens, I'm moving to another country. Maybe some small tropical Pacific Island.

Personally, I don't see how HIPPA standards apply to individuals who are not medical care providers, who ARE subject to that statute. The Red Cross sounds like they don't want us, or don't need many of us if they do.

That's just My take... Anybody else get that take?

The Red Cross is an organization that needs to project a positive image as well, and lets face it there are many ham radio operators who really don't give a hoot about how professional they look - showing up in shorts, with their beer belly hanging out from under a stained hooters t-shirt.

There are also the hams that are huge liabilities because of previous severe criminal histories that should have no business near a disaster area, or handling H&W or disaster traffic in my opinion.

Then there are the ones that refuse to do the training that an organization requires of its volunteers for whatever reason - and then want to be part of disaster communications.

I think its important to remember that an FCC license does not give us the right to help out any organization, the organization gives that opportunity when you meet there qualifications.

Then they should organize a troop like ARES and train them
and make them part of the organization. THEN they can dismiss
anyone they deem undesirable. They can then control them as
they are part of the larger organization. Those who do not play
by the rules can be dismissed and ignored.

Just MY take. But this PR blip sounds like they would rather only
two guys show up and besides they will be using other means.

Thanks for your input. What you say makes sense.

Like it or not client privacy is to be respected and protected as confidential. You would expect your privacy to be treated the same. FM voice circuts are easy to intercept- Imagine some one hearing through unofficial (or official) channels a loved one was severly hurt or killed and it turnes out to be a false report - Or a former husband hearing his former wife and child are at a shelter site and he wants to settle accounts? Who would be liable? The operator or Red Cross? There are sound reasons why client confidentiality cannot be comprimised in this atmosphere of liability trial lawyers that are flourishing right now- I think too many eggs are in the internet basket however- As usual a combination of methods need to be used to send information. Modes that are more complicated to intercept such as SSB,HF digital, CW and packet need to be utilized more than they are but that requires more operator skill.
 In a life or death situation any mode can and will be used to save a life but for any thing else care and common sense need to be taken with client information.Like it or not this is the world as it is, not how we want it to be or like it to be.
  The Red Cross does want hams now and in the future but like every thing else there are ground rules that must be followed.

Sarcastic button ON (yet, with due respect to you...)

WELL... Let's see ... You make it sound like it just may be
too dangerous to even attempt to help at all. Maybe we
should just stand by and quit helping because we MIGHT pass
a mistaken message or somebody might hear me make a call
about someone's medical condition. Yeah... you are right. It is
just too touchy for us and we should not get "involved." Let's
just stay home and let someone else handle it. Hmmm....

Sarcastic button OFF:
Serious button ON :

While there may be sound reasons, but I do not discern one
in your post. I believe that under emergency situations, most
reasonable people would have us suspend some privacy
protections, and help out. Certainly we should use the least
onerous and invasive methods available, in due respect for that
privacy, which IS important, as you state.

I spent 25 years as a trial attorney, and I don't accept the liability
argument. Although (seriously) heaven forbid you are right
about this, because that would be just too much to bear - really,
seriously, imagine we step forward to pass traffic to help someone
in distress, and get sued for doing so for some really obscure reason
as you describe! Sheesh... I hope it has not come to THAT !

You do make a very interesting point about using different modes,
although they may be subject to interception as you suggest.
I just thought the Red Cross was saying IT would be placing
great reliance on the internet and similar channels of
communication in times of trouble -- which seem, to me, like
the very sort of media that will be unavailable and "down" during
a big emergency - which is where we come in handy, filling
in where other methods are "down."

Thank you for reply. It gives us food for thought. Man,... I hope
we have not become as litigious as you suggest. But, who
knows... the news is full of such silly stories, eh?

now you know why red cross is requiring there internal staff to get liceanse. to limit the use of ham radio volunteers in a emergency and use more of their own staff to past h @ w messages out from the scene.

4454. Re:American Red Cross Clarifies Amateur Radio Policy

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-07 18:28:57 UTC
From: Hank Greeb
Topic: 4441 Message: 4454

The training I've received, and the protocol which I've used in various relief efforts during and after sn*wstorms, tornadoes, floods in SW Ohio was to never pass "bad news" type health and welfare traffic on non-secure circuits. In training exercises we'd send "all fine" reports from hospitals to Red Cross HQ, including names, toe tag numbers, etc. It happened that in some 30+ years we never lost commercial communications circuits to/from hospitals in the area, so this kind of training was never put to use.

And, for the first few days of any emergency situation, we'd let the incoming H&W traffic pile up outside the area, because attending to the critical needs of those in the effected area was of much more importance. When we got to the H&W traffic we'd relay "good news" information via whatever means were available, including FM voice circuits, but would inform Red Cross via telephone or other secure circuits (if they didn't already know) of any deaths or major injuries.

In one fairly recent case, after a day or two, we surveyed the area, armed with cell phones. When we'd find people at their damaged home sites, we'd offer them a cell phone to make one or two calls to their loved ones outside the area to let them know they were okay. Many of these people were working too hard to get their lives together to even think about letting their friends and relatives know their whereabouts. And, we'd report, via FM voice circuits, that "the situation at 1234 main street resolved." The legal beagles at Red Cross in SW Ohio didn't have a concern that some nut might be listening, who would try to do mayhem to a resident.

Yes they are. Their next meeting is scheduled for Sept. 13. Unfortunately I don't know where they are meeting as I understand where they had been going closed.

You might try sending an email to Jon Plyler AB8RD is should know or can get you in touch with who would know.
Jon's address is ab8rd@arrl.net

Subject: [WestMichiganHams] Re:American Red Cross Clarifies Amateur Radio Policy

The training I've received, and the protocol which I've used in various relief efforts during and after sn*wstorms, tornadoes, floods in SW Ohio was to never pass "bad news" type health and welfare traffic on non-secure circuits. In training exercises we'd send "all fine" reports from hospitals to Red Cross HQ, including names, toe tag numbers, etc. It happened that in some 30+ years we never lost commercial communications circuits to/from hospitals in the area, so this kind of training was never put to use.

And, for the first few days of any emergency situation, we'd let the incoming H&W traffic pile up outside the area, because attending to the critical needs of those in the effected area was of much more importance. When we got to the H&W traffic we'd relay "good news" information via whatever means were available, including FM voice circuits, but would inform Red Cross via telephone or other secure circuits (if they didn't already know) of any deaths or major injuries.

In one fairly recent case, after a day or two, we surveyed the area, armed with cell phones. When we'd find people at their damaged home sites
, we'd offer them a cell phone to make one or two calls to their loved ones outside the area to let them know they were okay. Many of these people were working too hard to get their lives together to even think about letting their friends and relatives know their whereabouts. And, we'd report, via FM voice circuits, that "the situation at 1234 main street resolved." The legal beagles at Red Cross in SW Ohio didn't have a concern that some nut might be listening, who would try to do mayhem to a resident.

Great posts on this subject!
 The RC will always need hams to assist in a big disaster where all else fails. They realize this. My RC Disaster Chair has stated this to me and so has National. I do know Red Cross staff that see us perform and want to get a ham ticket because they like what they see, not to "evade using us" etc. I admit the National staff do put too much faith in the Internet- They do try to get this link up fast! That is because they rely too much on it! They all use and know computers! Infrastructure is rapidly becoming readily repairable and in all but the worst situations and can be brought up very fast. Therefore it is less of a case against ham radio as for the rapidity in which Internet linking can be set up again. It comes down to being ready for a very rapid deployment at the onset of a big disaster before these comercial circuts are restored- Unfortunately this window is closing rapidly as techonology inproves leaving us hams to make sure we can deploy in a minimum of time. Sarcastic button ON (yet, with due respect to you...)

WELL... Let's see ... You make it sound like it just may be
too dangerous to even attempt to help at all. Maybe we
should just stand by and quit helping because we MIGHT pass
a mistaken message or somebody might hear me make a call
about someone's medical condition. Yeah... you are right. It is
just too touchy for us and we should not get "involved." Let's
just stay home and let someone else handle it. Hmmm....

Sarcastic button OFF:
Serious button ON :

While there may be sound reasons, but I do not discern one
in your post. I believe that under emergency situations, most
reasonable people would have us suspend some privacy
protections, and help out. Certainly we should use the least
onerous and invasive methods available, in due respect for that
privacy, which IS important, as you state.

I spent 25 years as a trial attorney, and I don't accept the liability
argument. Although (seriously) heaven forbid you are right
about this, because that would be just too much to bear - really,
seriously, imagine we step forward to pass traffic to help someone
in distress, and get sued for doing so for some really obscure reason
as you describe
! Sheesh... I hope it has not come to THAT !

You do make a very interesting point about using different modes,
although they may be subject to interception as you suggest.
I just thought the Red Cross was saying IT would be placing
great reliance on the internet and similar channels of
communication in times of trouble -- which seem, to me, like
the very sort of media that will be unavailable and "down" during
a big emergency - which is where we come in handy, filling
in where other methods are "down."

Thank you for reply. It gives us food for thought. Man,... I hope
we have not become as litigious as you suggest. But, who
knows... the news is full of such silly stories, eh?

The one thing which is always stressed in a disaster situation is that a volunteer should register with a serving agency, rather than "self actuation" or trying to get inside a disaster area as an individual.

It is always wise to get registered prior to a disaster, though in preparation for possible mayhem from Hurricane Gustav the Red Cross was offering "crash courses" toward becoming a qualified volunteer. It is unclear how many of those volunteers were actually needed for this event. However, the next one could be "the big one" so volunteering won't be fruitless.

> American Red Cross Clarifies Amateur Radio Policy
> On September 3, the American Red Cross released a statement to clarify their policy as it concerns Amateur Radio operators. The letter below from American Red Cross Disaster Service Technology Manager Keith Robertory, KG4UIR, is presented in its entirety:
>
> There has recently been some posting on amateur radio discussion groups on the Internet that is carrying false or misleading information. The Red Cross does not have a policy against amateur radio participating in passing health and welfare messages. In fact, we recognize the importance of amateur radio in being a vital method for people to get registered.
>
> The American Red Cross welcomes the support of Amateur Radio Operators in connecting friends and family members together through our health and welfare programs. The grassroots, independent nature of Amateur Radio Operators in communities around the country make them well suited for this task.
>
> General welfare messages are processed through the Red Cross Safe and Well web site. This site allows people to register their status which can be checked by friends and family who

search by your name, address or phone number. A quick look at the website disastersafe.redcross.org will show how both the registration process and search are done.
>
> As few as two hams can setup an effective registration process. A ham located in the disaster zone can use any mode to transmit the basic Safe and Well registration information to another ham located outside the disaster who would enter the information on the web site. This quick ad-hoc setup doesn't rely on any affiliations and can be established by a call out to another ham who can help.
>
> The Red Cross also processes welfare inquiry messages that contain specific medical information. These contain more sensitive and personally identifiable information at the same time that the Red Cross keeps confidential to respect client privacy. We are researching if and how these messages can be passed across open frequencies, and what federal restrictions (such as HIPPA) may be impact how this is done.

Paul and All:

I don☐t believe they are honestly trying to limit the use of Amateur radio volunteers. Instead, they are trying to use the Red Cross volunteers that may already be on site or readily available- and plan make use of amateur radio communications when available and/or needed. In all honesty, as most of us know, it is very difficult to find amateur radio operators who are interested in disaster communications to begin with. Finding those willing to jump through all the hoops- and take the training that is required- to work for the served agencies these days is extremely difficult.

On the Red Cross side of things, being involved in many aspects of response around our chapter means I can tell you that having all volunteers cross-trained to do multiple jobs makes life easier for all involved. If an ERV goes out some place the seating is very limited. One cannot expect to have a spot taken up by one of us to just talk on the radio, or expect one of us to go out every time that the ERV responds to an incident.

On the ARES / RACES side of things: I☐ve put several people from EMS, Fire, Red Cross, SAR and Law Enforcement through the "Ham in a Day" program. These people are not trying to replace us, but instead are trying to work with us or to be able to communicate using amateur radio when the ☐merde frappe le ventilateur☐.

As for the H&W traffic: I agree with all of you on the various comments both good and bad. In one of my original trainings years ago I was simply taught that there are many methods to communicate. Each method of communication has its advantages and disadvantages. These features should be exploited as much as possible to pass traffic in the most efficient manner possible, while limiting the amount of exposure and errors.

To discuss potential errors via radio in general we could start an entire mail list dedicated to goofs, blunders and whoops☐ that inevitably occur over the radio. It would embarrass us, as well as make us laugh- and I☐m not talking about just amateur radio. I☐m referencing radio in general. To end my email, I hope to remind everyone as to what we as potential emergency communicators do. We should consider ourselves ☐volunteer professional disaster / emergency communications people.☐ We should employ whatever method is available, whenever possible, to get the message through with the least amount of error- and be as efficient as we possibly can.

Just my two cents, take it for what it is worth. It☐s my opinion and only my opinion.

Jeff ☐ N8JSN

Paul and All:

I don’t believe they are honestly trying to limit the use of Amateur radio volunteers. Instead, they are trying to use the Red Cross volunteers that may already be on site or readily available- and plan make use of amateur radio communications when available and/or needed. In all honesty, as most of us know, it is very difficult to find amateur radio operators who are interested in disaster communications to begin with. Finding those willing to jump through all the hoops- and take the training that is required- to work for the served agencies these days is extremely difficult.

On the Red Cross side of things, being involved in many aspects of response around our chapter means I can tell you that having all volunteers cross-trained to do multiple jobs makes life easier for all involved. If an ERV goes out some place the seating is very limited. One cannot expect to have a spot taken up by one of us to just talk on the radio, or expect one of us to go out every time that the ERV responds to an incident.

On the ARES / RACES side of things: I’ve put several people from EMS, Fire, Red Cross, SAR and Law Enforcement through the "Ham in a Day" program. These people are not trying to replace us, but instead are trying to work with us or to be able to communicate using amateur radio when the “merde frappe le ventilateur”.

As for the H&W traffic: I agree with all of you on the various comments both good and bad. In one of my original trainings years ago I was simply taught that there are many methods to communicate. Each method of communication has its advantages and disadvantages. These features should be exploited as much as possible to pass traffic in the most efficient manner possible, while limiting the amount of exposure and errors.

To discuss potential errors via radio in general we could start an entire mail list dedicated to goofs, blunders and whoops’ that inevitably occur over the radio. It would embarrass us, as well as make us laugh- and I’m not talking about just amateur radio. I’m referencing radio in general. To end my email, I hope to remind everyone as to what we as potential emergency communicators do. We should consider ourselves “volunteer professional disaster / emergency communications people.” We should employ whatever method is available, whenever possible, to get the message through with the least amount of error- and be as efficient as we possibly can.

Just my two cents, take it for what it is worth. It’s my opinion and only my opinion.

Jeff – N8JSN

now you know why red cross is requiring there internal staff to get liceanse. to limit the use of ham radio volunteers in a emergency and use more of their own staff to past h @ w messages out from the scene.

Sarcastic button ON (yet, with due respect to you...)

WELL... Let's see ... You make it sound like it just may be
too dangerous to even attempt to help at all. Maybe we
should just stand by and quit helping because we MIGHT pass
a mistaken message or somebody might hear me make a call
about someone's medical condition. Yeah... you are right. It is
just too touchy for us and we should not get "involved." Let's
just stay home and let someone else handle it. Hmmm....

Sarcastic button OFF:
Serious button ON :

While there may be sound reasons, but I do not discern one
in your post. I believe that under emergency situations, most
reasonable people would have us suspend some privacy
protections, and help out. Certainly we should use the least
onerous and invasive methods available, in due respect for that
privacy, which IS important, as you state.

I spent 25 years as a trial attorney, and I don't accept the liability
argument. Although (seriously) heaven forbid you are right
about this, because that would be just too much to bear - really,
seriously, imagine we step forward to pass traffic to help someone
in distress, and get sued for doing so for some really obscure reason
as you describe! Sheesh... I hope it has not come to THAT !

You do make a very interesting point about using different modes,
although they may be subject to interception as you suggest.
I just thought the Red Cross was saying IT would be placing
great reliance on the internet and similar channels of
communication in times of trouble -- which seem, to me, like
the very sort of media that will be unavailable and "down" during

a big emergency - which is where we come in handy, filling
in where other methods are "down."

Thank you for reply. It gives us food for thought. Man,... I hope
we have not become as litigious as you suggest. But, who
knows... the news is full of such silly stories, eh?

Happy trails and 73. ---- K8JHR ------

Yes they are. Their next meeting is scheduled for Sept. 13. Unfortunately I don't know where they are meeting as I understand where they had been going closed.

You might try sending an email to Jon Plyler AB8RD is should know or can get you in touch with who would know.
Jon's address is ab8rd@arrl.net

Does anyone on this reflector know if the Muskegon chapter of QCWA is
active? I sent a message to the listed e-mail address of the chair, and
it was returned.

Thanx in advance

Denny:

I thought I remember that the QCWA meets on the second Thursday. Their meeting would be Sept. 11 and not on Saturday. Saturday the radio club is having a Steak Dinner at five o'clock. The QCWA is active and has a number of members.

I like your idea of asking Jon, AB8RD.

This could all be verified on the Teenage Net or Bathrobe Net. Those guys would know for sure. And I did hear the Cherokee Restaurant mentioned in this context. At the time I did not really take note.

Bill, AB8SC

From: Rick Eversole <rick@...>
To: undisclosed-recipients: ;

Hello from N6RNO "The Rhino" your new chairman for the greatest State
QSO party the California QSO Party.

When: 1600 UTC October 4, 2008 to 2159 UTC October 5, 2008
Where: 160m, 80m, 40m, 20m, 15m, 10m, 6m, 2m
Modes: CW, SSB
Logs Due: November 15, 2008

The only real change this year is that we will not have county line
operations. This means that there is only one county given on a QSO.
We feel this makes it easier for everyone.

Key Information:
Website: http://www.cqp.org
Rules: http://www.cqp.org/Rules.html
County Registration http://www.cqp.org/Counties-Plan-2008.html
Operating Strategy: http://www.cqp.org/pdf/cqp_strategy_k6rb.pdf
Information: mailto:info@...

CQP Flyer: http://www.cqp.org/2008/CQP2008_Flyer.pdf
One page key information, date, times, frequencies and rally times.
Also, maps showing likely rare counties and state/provinces.

CQP Package: http://www.cqp.org/2008/EviteCQP2008.pdf
General invite, Rules, County/State Abbreviations

Last year if you were in Montana and sent in a log you would have won
the state.

Get the certificates, plaques and wine that you deserve. Send in your logs.

--
Charging Forward
Rick "The Rhino" N6RNO

@ Tehama for California QSO Party, October 4-5 2008.
Where will you be?

To: YAESUVX5@yahoogroups.com
Date: Monday, September 8, 2008, 2:30 PM

A "HAM" radio operator was recently viciously beaten and robbed in San Francisco, California.

On September Tuesday, 2, 2008, at approximately 5:45AM, John, WB6WQF, was walking to work on California Street between Stockton and Grant (next to the Ritz Carlton hotel). A description of the attack, the equipment stolen, and an Email from John follows:

"Someone came up from behind me and whacked me over the head with a large table leg, knocking me to the ground and leaving me bloody. The radios were in my briefcase, which was stolen, along with my laptop computer. The assailants robbed me and then drove off in a light colored compact sedan.

The MTX9250 was programmed with just about all of the Northern California open 900MHz repeaters, in about 10 zones. I also had some Connecticutt [sic] repeaters programmed in one zone. The repeater locations show up on the display (e.g., Black Mtn., Vacaville, Willits, Concord, etc.). It's not easy to program these radios and it's pretty easy to identify my programming.

The FT-60R was programmed with about 900 repeaters. Bank 1 has all of the 99 or so AAR railroad frequencies. Bank 2 has a number of local Norcal repeaters, mostly SFARC, Marin ARC, Diablo, and Winsystem. Bank 3 has all of the Winsystem repeaters. Other banks have various Norcal repeaters, one bank has Connecticut VHF repeaters, and another bank has Connecticut UHF repeaters. Also should be easy to spot.

I am recovering from my injuries, and I'm lucky to be alive. I would really like to get these guys, and perhaps we can do it if the stolen radios show up."

Nomenclature of stolen radios (both are Handy-Talkies) - nomenclature and description of laptop computer:

* Motorola MTX9250, serial number 921TDJ1024 (Easy to spot, not a common radio)
* Yaesu FT-60R, serial number 6L441005.
* The laptop is a Thinkpad X60s, model 1704-4JU, serial number LVA3837. It's a 12.1" lightweight portable, with a 60GB hard drive,

and 1.5GB of RAM, no optical drive. There is a power-on password and a hard drive password, so it boots with a black screen and a padlock symbol prompt in the upper left corner.

It has been suggested that the "Ebay" website be monitored in case these items show up for auction

If you have any information regarding the perpetrators or the equipment, please email John:

"jpoesq at sbcglobal dot net"

I'm not a big fan of Ham in a day. All you for is memorize answers.

You really don't learn anything but what answer to sellect

Thanks,

Zachary Lassiter

Paul and All:

I don’t believe they are honestly trying to limit the use of Amateur radio volunteers. Instead, they are trying to use the Red Cross volunteers that may already be on site or readily available- and plan make use of amateur radio communications when available and/or needed. In all honesty, as most of us know, it is very difficult to find amateur radio operators who are interested in disaster communications to begin with. Finding those willing to jump through all the hoops- and take the training that is required- to work for the served agencies these days is extremely difficult.

On the Red Cross side of things, being involved in many aspects of response around our chapter means I can tell you that having all volunteers cross-trained to do multiple jobs makes life easier for all involved. If an ERV goes out some place the seating is very limited. One cannot expect to have a
spot taken up by one of us to just talk on the radio, or expect one of us to go out every time that the ERV responds to an incident.

On the ARES / RACES side of things: I’ve put several people from EMS, Fire, Red Cross, SAR and Law Enforcement through the "Ham in a Day" program. These people are not trying to replace us, but instead are trying to work with us or to be able to communicate using amateur radio when the “merde frappe le ventilateur”.

As for the H&W traffic: I agree with all of you on the various comments both good and bad. In one of my original trainings years ago I was simply taught that there are many methods to communicate. Each method of communication has its advantages and disadvantages. These features should be exploited as much as possible to pass traffic in the most efficient manner possible, while limiting the amount of exposure and errors.

To discuss potential errors via radio in general we could start an entire mail list dedicated to goofs, blunders and whoops' that inevitably occur over the radio. It would embarrass us, as well as make us laugh- and I'm not talking about just amateur radio. I'm referencing radio in general. To end my email, I hope to remind everyone as to what we as potential emergency communicators do. We should consider ourselves "volunteer professional disaster / emergency communications people." We should employ whatever method is available, whenever possible, to get the message through with the least amount of error- and be as efficient as we possibly can.

Just my two cents, take it for what it is worth. It's my opinion and only my opinion.

Jeff – N8JSN

now you know why red cross is requiring there internal staff to get liceanse. to limit the use of ham radio volunteers in a emergency and use more of their own staff to past h @ w messages out from the scene.

Sarcastic button ON (yet, with due respect to you...)

WELL... Let's see ... You make it sound like it just may be
too dangerous to even attempt to help at all. Maybe we
should just stand by and quit helping because we MIGHT pass
a mistaken message
or somebody might hear me make a call
about someone's medical condition. Yeah... you are right. It is
just too touchy for us and we should not get "involved." Let's
just stay home and let someone else handle it. Hmmm....

Sarcastic button OFF:
Serious button ON :

While there may be sound reasons, but I do not discern one
in your post. I believe that under emergency situations, most
reasonable people would have us suspend some privacy
protections, and help out. Certainly we should use the least
onerous and invasive methods available, in due respect for that
privacy, which IS important, as you state.

I spent 25 years as a trial attorney, and I don't accept the liability
argument. Although (seriously) heaven forbid you are right
about this, because that would be just too much to bear - really,
seriously, imagine we step forward to pass traffic to help someone
in distress, and get sued for doing so for some really obscure reason
as you describe! Sheesh... I hope it has not come to THAT !

You do make a very interesting point about using different modes,
although they may be subject to interception as you suggest.
I just thought the Red Cross was saying IT would be placing
great reliance on the internet and similar channels of
communication in times of trouble -- which seem, to me, like
the very sort of media that will be unavailable and "down" during
a big emergency - which is where we come in handy, filling
in where other methods are "down."

Thank you for reply. It gives us foo
d for thought. Man,... I hope
we have not become as litigious as you suggest. But, who
knows... the news is full of such silly stories, eh?

Happy trails and 73. ---- K8JHR ------

Do they teach the questions on the test version they use?
I cannot imagine learning all the questions in a single day.
I CAN imagine learning the questions for that particular version
of the exam in one day. But I don't think that would be a fair
way to proceed if that is what they are doing. Don't know, but
really wonder.

There have been "Licenses in a Day" classes since shortly after the code requirement for technician licenses was adopted a bunch of years ago. People figured out that they could teach enough of the answers so that most people could pass the test.

But, only a few groups follow through with "elmering", "open radio rooms." etc. so many of the people who get licensed don't actually get on the air. "Passing a test" and "gaining enough knowledge and generating enough enthusiasm to want to operate" are two different things.

4475. Meetings and events coming soon

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-09 13:58:34 UTC
From: Jack Amelar
Topic: 4475 Message: 4475

LARC members, family, friends, guests, anyone interested.
RE: Annual meeting and Morley gathering (Separate events)

The Lowell Amateur Radio Club's "Annual" meeting / gathering is this Saturday, September 13. This meeting, including election of officers for Oct 1-Sept 30 is usually abbreviated, followed by a picnic gathering that all are invited to.
The meeting begins at 12 noon, followed by picnic. The picnic will be outdoors if the weather permits, indoors conference room if not. Bring your own food and drink. "The Shack" at the Flat River Outreach Ministries building, 11535 E Fulton Ave - HWY M-21, Lowell. West end of Lowell, about 1 mile west of the Lowell Meijer. Talk-in 145.27-(ctcss94.8Hz).

An event this club have not done in a long time is a weekend campfire gathering. We also should do one more site cleanup at the Morley receive site.
Sooo, Saturday, September 20, campfire-cookout at the Morley receive site. Input "3800 155th Ave, Morley, Mi 49336" in your favorite maping software or website. Figure about 6PM, I'll provide burgers and dogs, bring something to pass. You might want to bring a chair as well.
Now for more details. I'll arrive with my motorhome Friday afternoon, and since I'm taking vacation the following week, leave when I'm good and ready to. Anyone else feel like a camping trip out in a rural area with mix of trees and open areas is also welcome to bring your gear. Electricity is available, bring extension cord, you'll need to bring water, etc. Saturday will be site cleanup, figure about 10AM start. Cookout / campfire at 6PM. If you have to choose, do the evening campfire. Not a lot has to be done during the day, we'll manage just fine. Anyone who was around when we first raised our antennas on the Morley tower remember the good time and comeradaty we had the night before and during the antenna work should look forward to the weekend. Of course, all are welcome including family, friends, guests. Talk-in 145.27-(ctcss94.8Hz), you will have no problem accessing the repeater as you approach the Morley tower. I will also have my cell phone.

4476. HIAD thoughts.. from the guy who does it..

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-09 19:35:24 UTC
From: Jeff's Lists
Topic: 4441 Message: 4476

Since it was brought up I thought I would share my thoughts.

I thought I would answer a few things about HIAD as the local "creator" of the program. (Yes, I know I am not the first person to run the program).

This is sure to spark some high emotions, and I'm sure many hams will have comments about programs that simplify the training down to a "mere" 5 hours.

I'm not here to argue with anyone about it. Trust me; I have mixed emotions in regards to teaching HIAD. I've heard all the arguments both for and against it. The ratio of people who have come to take HIAD vs. the amount of people who are taking traditional classes simply proves the value of the course.

I am not trying to belittle the people who are dedicated enough to take the traditional ham course. Instead I'm hoping to spark some interest from the local clubs and ARPSC groups so they may both come back and help to mentor these amateurs to become the best they possibly can.

The course I "teach" is a study course and nothing more. The idea is simply retention; we are not trying to teach anyone anything. Our goal is to provide basics and help with license acquisition. We open doors to opportunities in both volunteering and for people who do not have the time to take an 8 week course.

While I cannot speak for other programs who offer HIAD, I can speak for the program we offer in Kent County. When you come to take the course we offer two follow up courses to the Ham in A Day. The first class is an introduction to amateur radio course- we answer a lot of questions about amateur radio and help people to make that imperative first contact in a controlled setting. We also show them the right way to talk on the radio. The second course is a net control course- the idea is if we train them to do net control in the beginning, they will have the ideas down when they actually check in to one.

For those who cannot attend these classes I work to get them in contact with their local ARES / RACES coordinator to get them involved. As an ARRL representative, I also recommend the ARRL and some of the courses they offer. I recommend they get involved with the local clubs. The only issue I have with recommending people to the clubs is the snobbish attitude that some amateurs have when people who take the Ham in A Day begin to attend their club's meetings. I've witnessed it in person and it's not pretty. Instead of pushing these people away from the hobby why not welcome them with open arms? If your worry is they aren't trained properly, look at them as clay you can mold over time. Getting them involved in your club or group could turn them into another lifetime member! My theory when it comes to Ham in A Day is simple- It's like fishing. I'm out in the boat trying to

hook them, then when I hook them its up to the rest of the ham community to reel them in. Don't throw them back into the water to get eaten by a bigger (or wrong) fish.

Ok - let me get this straight.

You take a group of people that already whine because they don't want to jump through the proper hoops to volunteer through an organization in an emergency (ARPSC) and remove all the hoops to try and recruit more people to that organization? - Doesn't make much sense to me! What good is retention if you have a bunch of people who aren't willing to go through the hoops?

So you have mixed feelings about it yourself but go ahead and teach it? I wont even go there are its going to be a bit insulting.

Jeff great post we in grand haven have also done the ham in a day classes and then invited our new hams to our club meetings .I agree that their are some clubs that will turn up their noses at ham in a day techs it is also the same people that do the same to no code extras the best thing we as clubs is to welcome all hams no matter how they were licensed . Some of the people that take the ham in a day classes are CERT members ,Law enforcement, firefighters , and john q public the main reason is they don't have the time for 8 week classes 73 John kc8uny----- Original Message ----

4480. ARRL Presents New Membership Benefit

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-10 15:31:39 UTC
From: Hank Greeb
Topic: 4480 Message: 4480

ARRL Presents New Membership Benefit

With just a mouse click or two, ARRL members can now access the online QST magazine archive. This new benefit -- a service of the ARRL Technical Information Service (TIS) -- provides PDF copies of all QST articles from December 1915 through December 2004, enabling members to view and print their favorite article, project and more. For many years, the TIS has provided members with assistance researching ARRL periodicals and publications, as well as providing members and non-members with article reprints for a small fee. Access to the new online digital QST archive is free for ARRL members

"Having access to every issue of QST through 2004 is absolutely incredible!" said ARRL Lab Manager Ed Hare, W1RFI. "The best of the best of QST from every era is now at the fingertips of every ARRL member with a keyboard and an Internet connection. Members can research articles on any subject that interests them, or just browse the past issues. This will be a popular membership benefit that will be of special value to new and long-time hams alike. This valuable content will help radio amateurs who use QST as a technical resource -- for projects, equipment 'hints and kinks' -- and for other research contributing to the advancement of the radio art. We know many hams will simply enjoy perusing these pages of history, too."

The ARRL Periodicals Archive and Search lists every article for QST from 1915 to the present, QEX from 1981 to the present, Ham Radio from 1968 to 1990 and NCJ from 1973 to the present (please note that beginning in 1998, each issue of QEX covers two months). Only ARRL members will be able to download and print copies of the QST articles.

QST magazine is the official journal of ARRL, the national association for Amateur Radio. An interest in Amateur Radio is the only essential qualification of membership. ARRL membership is $39 per year in the US. For a complete list of membership benefits and dues, please visit the ARRL Membership Web page at https://www.arrl.org/forms/membership/

Just because you CAN do something... does NOT mean
you SHOULD do it.

If an idea is a bad idea, you don't make it a better idea by
trying to make a "fix" for it. Why do other hams have to make
exceptions and do more work to train them later, when they could
have learned it better in the first place? Why make experienced
hams play tutor to folks who can learn on their own. I don't mind
helping others with the hard stuff, but not on stuff that they can
jolly well learn on their own -if they are willing and interested enough
and motivated to do it.

HAID is a bad idea. It is not a good way to develop good hams,
and you cannot possibly teach the entire course in a day.

FACT = one can read more than 10 times faster than one can
listen to a lecture on the same material.

FACT = reading is (most often... yes there are exceptions) a better
way to learn and retain information than listening to a lecture.

Just because you can get students past the test this way, does not
mean you should - it is not a good idea.

Just MY take. ========= Richards -K8JHR ==========

I was just wondering how many of you here on WMH have brought a new ham into ham radio in the last 12 months ... helped them get there ticket ... gone to a club meeting with them ... if more then one tell us how many ... How you did it ... did you get them signed up here at WMH ... if you would like too tell us somethings about them ...

I myself have to say that I have failed at this and I know someone that is interested and would make a good have .. so I will work on it ...

73 to all and please keep up the good comments but try not to get hung up on one subject ... Don Meyer - KB8ODB

4485. New poll for WestMichiganHams

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-11 02:24:56 UTC
From: WestMichiganHams@yahoogroups.com

Enter your vote today! A new poll has been created for the
WestMichiganHams group:

This poll will not display voter identity
I am taking a poll on West Michigan Hams about hams on the
reflector
Please take the time to pick your choices and you can pick
more then one choice
How did you get started in this hobby....73 Don - KB8ODB

o I have a Technician Class License
o I have a General Class License
o I have a Amateur Extra Class License
o I have had my license for less then 10 years
o I have had my license for more then 10 years
o I studied out of books and went to a test site on my own
o I studied with help from another ham and tested
o I attend a class of more then 16 hours and tested
o I attended a ham in a day class and tested
o I passed my test the first time
o I passed my test on the 2nd or more times
o I plan on advanceing on my own
o I am looking for a class to take to advance
o I use VHF
o I use HF
o I use CW
o I use Phone
o I use Digital
o I have battery backup at my home station
o I am mostly on the repeaters
o I am a membe of at least one club
o I am a member of an Emergancy service group
o I like to help out with ham related events
o I read this poll but am not taking part in it

To vote, please visit the following web page:
http://groups.yahoo.com/group/WestMichiganHams/surveys?id=2094144

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

I brought myself in after waiting 40 years!

I really think the key is the prospect must be self-motivated
join and wants to learn. You can show your enthusiasm, and
share joy for the hobby, and maybe invite him into the shack to
listen and maybe try a QSO - like on one of your favorite net
contacts where you know they will be friendly and helpful and
welcome him into the fold... and then lead him to what he needs
to study for the exam.

If he wants it, he will take it up. Otherwise, not. You can offer
to help, but he has to move on it. Show him where to order
the exam materials and offer to discuss anything he needs.

A soft sell is best, of course, but you know that - I can tell just by
the way you are asking the question.

Put him in a position to move ahead-- and let him make the move.
I really don't think you can do any more than that. It is kinda
like bringing a new member into a service club, like AMBUCS,
ROTARY, KIWANAS, and the like. You invite him to a meeting,
introduce him around, and tell him about the mission, but in the
end, he has to want it for himself or it won't take.

Just MY take . . . ///////// K8JHR ////////////

4488. Fox (Transmitter) Hunt & Steak Fry

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-11 12:50:43 UTC
From: Bill
Topic: 4488 Message: 4488

All:

You, yes YOU, are invited to a fun Saturday (yes, THIS one) packed with events. The day starts with a fox hunt at one o'clock. There will be fox hunting hardware available if you find yourself short an antenna or such. There will also be instruction and encouragement. Clarke, K8BP is heading up the fox hunt.

Actually you could start even earlier with breakfast at Whitlow's Restaurant. That's even more fun.

Later in the afternoon we're enjoying a Steak Dinner. New York Strips highlight the menu. Dinner starts at five o'clock. You don't have to be a fox hunter to enjoy the beef.

It all happens at the Muskegon Area Amateur Radio Council's clubhouse at 2888 Scenic (yep, ask your favorite mapping program for directions) over near Lake Michigan.

Come early, stay later, only show in the middle? It will all be great fun. And it doesn't matter if you are a ham or that you're just curious. Drop in and enjoy.

We hope to see you there.

Bill, AB8SC
MAARC guy

4489. ARRL Presents New Membership Benefit

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-11 15:46:43 UTC
From: Mark Thompson
Topic: 4480 Message: 4489

ARRL Presents New Membership Benefit

With just a mouse click or two, ARRL members can now access the online QST magazine archive. This new benefit -- a service of the ARRL Technical Information Service (TIS) -- provides PDF copies of all QST articles from December 1915 through December 2004, enabling members to view and print their favorite article, project and more. For many years, the TIS has provided members with assistance researching ARRL periodicals and publications, as well as providing members and non-members with article reprints for a small fee. Access to the new online digital QST archive is free for ARRL members

"Having access to every issue of QST through 2004 is absolutely incredible!" said ARRL Lab Manager Ed Hare, W1RFI. "The best of the best of QST from every era is now at the fingertips of every ARRL member with a keyboard and an Internet connection. Members can research articles on any subject that interests them, or just browse the past issues. This will be a popular membership benefit that will be of special value to new and long-time hams alike. This valuable content will help radio amateurs who use QST as a technical resource -- for projects, equipment 'hints and kinks' -- and for other research contributing to the advancement of the radio art. We know many hams will simply enjoy perusing these pages of history, too."

The ARRL Periodicals Archive and Search lists every article for QST from 1915 to the present, QEX from 1981 to the present, Ham Radio from 1968 to 1990 and NCJ from 1973 to the present (please note that beginning in 1998, each issue of QEX covers two months). Only ARRL members will be able to download and print copies of the QST articles.

QST magazine is the official journal of ARRL, the national association for Amateur Radio. An interest in Amateur Radio is the only essential qualification of membership. ARRL membership is $39 per year in the US. For a complete list of membership benefits and dues, please visit the ARRL Membership Web page at https://www.arrl.org/forms/membership/

4490. Ken Groom ZR5AAD - Quick Update

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-11 20:56:15 UTC
From: Steve Vander Hill
Topic: 4490 Message: 4490
Attachments: 1 described; binary payloads are missing from this source WARC

Hello, just a quick update on Ken Groom ZR5AAD, Ken is no longer at the Hospice House, he checked out about 1:30pm this afternoon. Ken has been feeling good enough to spend some time at home versus staying in a room at the Hospice House.

As more information becomes available, it will be shared.

Best regards,

Steve Vander Hill

So, when "you" say "You", does that include a husband and wife team from Hudsonville? We've hunted in Ottawa and Kent County this year, and we are curious to see if the RF plays by the same rules in Muskegon County :)

You bet!

A purpose of this activity is to give new hams an excuse to get active in ham radio. The assistance of the grizzled Elmer can help and encourage these folks. I'm not suggesting the XYL is grizzled. I would suggest that experienced fox hunters will enjoy the day in Muskegon County.

Come on over! What IS that phrase the Chamber of Commerce is using? "Catch the wave" or something . . . ?

Subject: Ken update

Ken Groom Update:

Sherry here....my tummy is full of Mario's pizza, so I'm good to go now!

First let me say, Ken is OK and doing well. We have moved him from Hospice House back home. This is temporary....it might be only one or two weeks.

His prognosis has not changed but he is a bit better in general. Part of the reason for this is the rest he has had at the Hospice House after the trauma of the stroke, biopsy operation, and hospital stay. For we know, all things aside, a hospital stay can be fatiguing.

So, as he's up and about a bit and aware, it has been decided to bring him home for a short time. For as long as he's cognizant and comfortable, we'll keep him with us in familiar surroundings. This is also a strategy recommended by Hospice to help utilize their gift of their Aid plan wisely as it had specific rules and time limits. We ALL want to ensure that Ken has the best care to the end of his life on this Earth. Nobody does it better than Hospice of Holland.

How this will work.....(or how I hope -grin)

We all are still under Hospice and they will send nurses, care people, volunteers and things that we need. They will come to the house to meet our needs. When it comes time for Ken to return to the Hospice House of Holland, they will facilitate the move in their beautifully, graceful way.

Help for Ken, Sherry and Chuck :

Sherry has return to work but just part time and from 8 to 12 (or 9 to 1)...depending on when the morning help arrives. At the moment, friends of Ken are offering to help cover this time so that Sherry can return to work for a while. Guelda & Larry Saylor (ham friends of Ken's) have been handling the schedule for helping Sherry. Basically, having a person in the house will help us ensure that Ken is in a safe

situation at all times.

We are taking everything a day at a time here. As things change, we'll keep updating everyone.

Visitors are welcome here too. We haven't talked about visiting hours for our home yet, so it's ok to call first and see what is happening around here and how Ken is at that time.

We do ask that there are no calls after 9:30 as we're all getting to bed early these days.

Now, on a lighter note...Although it was a little stressful and fatiguing for Ken to make the transition home today, he agreed with me that a swing through McDonald's for a chocolate shake would be a pretty good thing to do!! - grin As we were close by Phil's Military Shop off Butternut Drive, we swung by and rolled down the window so Ken could say hi!

Please feel free to email us if you have questions we haven't answered.

Hugs,

Sherry

4495. Tool Max this week

New this week at the Store

1 Icom SM-8 Desk Microphone like new $60.00
Wagan Power Zone Portable AC Power with 150 watts power inverter. Use for a UPS, Jump start box or a battery for a radio. $25.00
1 GPS III Garmin GPS unit with power/data cable wired for APRS $75 or best offer
1 GPS external antenna for above $50 or best offer
1 Radio Shack PRO 2018 200 channel Scanner $50 or best offer
1 Cushcraft 230 WB Boomer 2 meter Beam with 230VPK Stacking Kit New never used $175.00

We have Antennas, connectors, and mounts from Tower Electronics. We are a Dealer for Tower and have put them in Stock.

Other New items in Stock

14 Amp Jetstream Power Supply $55
28 Amp Power Supply $90 With Meters out of stock now $110
45Amp Power Supply $170
Lighting Arresters $21.50 ea
HF Antenna 20 Meter, 40 Meter, 75 Meter Fiberglass Hamsticks in Stock $20 each
New SWR Watt/Power & Field Strength Meter for 1.7-150 MHz in Stock $30
J Pole Antennas in Stock $15
RG-58 Cable .25 per foot
RG-8 .$1.00 per Foot
RG-8X Coax Cable .50 per Foot
75 ohm Cable 9040 International Wire and Cable .35per foot
PL-259 Connectors $3.25 ea adadapters for RG-58 or RG-8X $1.10 ea
BNC - SO-239 Connectors $2.50 ea
Double Female Connectors $2 ea

We also have Diagonal Pliers, Digital Multi Testers, Electrical Tape,Precision Screwdrivers Sets, Soldering guns, Irons and Industrial Batteries for your HT's

We are the only stocking Dealer in Michigan for W5YI Gordon West Study Manuals.

Technician Class $18.95
General Class $20.95
Extra Class $24.95
FCC Part 97 rule book only $3.95
ARRL Level 1 Amateur Radio Emergency Communications Course Level 1 books $16 each

Ramsey Kits for Kids (or Adults)

300 in 1 Electronic Lab $70
Bell Action Kit $9
Motor Action Kit $8
LED Binky Kit $8

Police Siren Kit $8
Electronic Dripping Faucet $10
LED Strobe Light with Case $45
AM Broadcast Transmitter Kit with Case $35
Tri-Field Meter $64

Other Used Equipment on Consignment
1 SMC 7004BR 4 port Computer Hub $5

1 GW GDM 8135 Digital Multimeter $30
MFJ-202B Noise Bridge $40 or best offer
PC-1A Kenwood Phone Patch $40
#425 B+W Low Pass Filter $15
MFJ-704 Low Pass Filter $20
11 Element 2 meter Beam $45
IC-255A 2 meter Radio with no tone board Like New from 1982 Good Packet Radio $45
Tubes A great Assortment of tested used Tubes $1-$4 each
B&K Model 4011 Precision function Generator $60
B & W Antenna Tuner VS-300A $40
RCA Volt Ohm Meter $25
Barket & Williamson Low Pass Filter $5
Speakers $2
Barket and Williamson Rotary Inductor and Counter for Antenna Tuner $50
Center Insulator for HF antenna $5
LED Emergency Light $10
Motorola consolette Base Station for packet set up on 145.090 $45
MFJ-722 Notch Filter $30.00
M1000 Regency 10 Ch Scanner Works great $25
Low Pass filter $5
EICO Solid State FET/TVM Model 240 VOM in good condition $40
2-9 inch clamps to mount antenna on large poles or vent pipes $5.56 each and less for smaller ones

Heathkit items in stock

Model HD-19 Hybrid Phone Patch for $5
2 HD-15 Phone Patch for $5 each
1 Model 10-17 Oscilloscope $40 Make offer
Heathkit Drive Belts for SB-100, 101,102, HW 100,HW101 $3

Tool Max Industrial Supply is the Tool and Ham Radio retail store on Schamber Dr just off Pontaluna Rd and US-31 just north of the old Hob Knob or Michael's Restaurant (Now tore down) in Muskegon . We have tools, industrial suppliers and Ham radios parts for sale. For more information call or e mail Tom KB8VEE at 231 798-7898 I am in the Store from 8:30AM-4:30PM Monday-Friday. Stop by and see me for all your Ham needs.

4496. Grand Haven Township tower rules stink

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-12 17:55:40 UTC
From: ke8fo
Topic: 4496 Message: 4496

I've found out from the township zoning administrator what my restrictions are for putting up a tower. I don't think they are "reasonable accommodation"!!!

Hams are exempt, but only allowed up to 35 feet from the ground (including antenna). A special land use only applies to commercial land. I would need to seek a variance, which could be difficult. Could put one on the roof, no matter the height of the roof.

Is that "reasonable accommodation"? I don't think so.

How much do I want to fight it? I have to think about that.

I can't believe this restriction hasn't been challenged in Grand Haven Township. There has to be dozens of us here (population is around 15,000).

Now what?

Mark, KE8FO

I live in Wyoming, MI, and we have unbridled allowance up
to 55 feet from grade.

Maybe we can pool our resources and research the matter
jointly as to 1) what we are really entitled to, and 2) how to
approach it.

Except for the actual height limit, seems we are similarly
situated. I have significant experience in legal matters
in a former life...

I had a conversation last year with a ham in your township and he said he ignored the restriction and just put a 48ft tower. He also said he would deal with it when they decided to complain about it. He said it has been up two years no and not a word so far. He went on to say federal law PR1 trumps local township laws. Now I'm not saying you/others should just go out and just defy local government. But until someone does it they will not make any changes and things will just stay the way they are. And NO a 35ft. tower and antenna is NOT reasonable.

From: Richards
Topic: 4496 Message: 4501

Interesting position, and I am inclined to agree (I use low dipoles.)

Yet, the big contesters, with the big scores and big DX card
collections would certainly argue otherwise. There is a reason
they have those 100 foot towers, with stacks of big beams.
If a low bazooka was the ticket, they would all be using them.

How do I reconcile all that with your statement.

No... this is not a flame or mere petty argument... I just got
the latest edition of QST and the big contest stations have the
big towers - and those guys are killing me in the pileups. Why
would they do it if it was not working for them. Why would they
keep building bigger towers with bigger beams if it did not matter
enough to induce them to go the extra trouble and expense?

Again, I am asking what I think is a serious question and not
just arguing. I am personally making my own decisions about
whether or not I want a tower, and if so, why, how big, and what
to put on it. Or do I want a big vertical in my smallish back yard.
Also, there are really no good (OK, maybe one only) good trees
to hang wire from. How do I get enough wire up high enough to
not want a tower? (My back yard is only 100 feet wide N-S, and
55 feet deep E-W) and I do not find it a persuasive argument to
tell me to move.

What other than a tower should I consider? This is a burning
question in my house this week. My XYL will probably lose her
mind if I don't find an answer real soon ! For her sake, what do
you guys think?

Considering:

* HyGain HiTower 53 foot vertical tower/antenna
* Hustler 6BTV trap vertical
* DX-Engineering 43 foot pole (needs big A*& tuner)
* Hy-Gain AV-640 or Cushcraft R-8 (no radial vertical)

or

45 foot tower with beam and some wire dipoles or such for
lower bands. I can go up 55 feet without any restrictions in my
bailiwick. But I want to avoid a tower if I can find a reasonably
good alternative. Wanna work all states and occasional foreign DX.

Any suggestions on what I can short of a tower if possible?

I've kicked this around, too. My solution? I'm stacking steel and building a huge aluminum antenna. That's my solution. YMMV

The thought of using other folk's shacks may be an alternative. There are shacks on the internet. And when there is an especially juicy DX out there I'm over at the radio club's station. I chase DX and the more confirmed the happier I'm going to be. Again, YMMV

If I were chasing WAS then I'd use wire in trees. It has worked for me. And you might even "graduate" to counties, although I personally think life's too short. For that Sunday morning seventy-five meter net I use a Carolina windom and get OK reports from the folks in the net. This means my wire is making it around the Great Lakes basin.

Maybe it's just to justify the tower but I'm feeling that I wrung all the DX out of the wire. And my township allows me to stack steel and aluminum to my heart's content. Nice, eh?

I'm a surveyor and years ago a township came to me and asked, "how high is that landfill?" They had an agreement with the landfill and wondered if the guy was living up to his end of the bargain.

Another time I was in a meeting of zoning administrators and a Circuit Court Judge. The folks attending asked the judge what to do when a citizen violated the township's set-backs. The judge suggested that the township could have the house moved at the expense of the homeowner.

I have not been asked by a township how high a tower was stacked. I did help an AM station answer that question for the FCC on some application. It rarely happens.

I might find an alternative. Townships and cities are finicky. Surveyors are expensive. Forgiveness is dear.

K8JHR:

Of course I would go with the tower. From what I know, and from past experience, even a low tower and a triband will trump just about ANYTHING! Sure, you can get on the air with a potato as an antenna....but a modest tower of 40 feet or more and a modest beam will put signals in your receive and your signal in many receivers that you wouldn't hear/QSL with before. If you have acres of land and can put up a lot of wire, more power to you. A city or suburban lot requires either a tower/beam or a vertical or some compromise.

I had one of those MFJ no-radial vertical dipoles for years. It was good, but just wasn't enough to work a lot of DX. So I was considering a Hustler vertical in the backyard with a lot of radials. The XYL has given me a "sort-of" green light to do the tower instead. I just didn't think it was going to be a problem in the township. I made sure when we bought the land here there were no CC&R. I made the bad assumption that the township would not be so restrictive.

Mark:

If you go in with knowledge, a positive attitude, copies of PRB-1 and results of several of the many lawsuits in which the hams were successful, you might find that the township will change their regulations.

I'm sending a copy of this to Jim Weaver, K8JE, our Great Lakes Division Direction. Jim successfully got permission to install a tower from Mason, Ohio, with this technique, a few years ago. I don't know all the details, but there was an ordinance similar to what appears in Grand Haven Township. and by the power of positive persuasion Jim now has a legal 70" tower, as a result of change in zoning regs. With the slow pace of bureaucracy in Michigan, even at the local level, it may take some time for things to change, but things can be changed when reasonable people sit down to discuss things of mutual interest.

I'd caution that you could antagonize people and "raise their hackles" and cause lots of grief for yourself and the township if you're not diplomatic in your conversations with them.

BTW, you can get a list of all hams within the ZIP code(s) within Grand Haven Township from qrz.com with their "name search" option. Just put in the zip code(s) involved, and you'll get a list of all the hams in that zip code. It's somewhat harder to get e-mail addresses, but it can be done, manually. And, if it's like some townships, you also may get hams outside the township but within a Zip code, which generally doesn't hurt. Using this technique we were able to get a sizable number of hams to help with another case in SW Ohio where a township zoning ordinance was quite restrictive.

This is absolutely great advice. I practiced law for 25 years and
believe this to be true. (This is not legal advice, but just my common
sense take based on personal empirical observation in W Mich courts)

I can’t really say what he should do, considering I don’t know his resources such as time or money to deal with it if it were to become a problem. I can though answer for myself it were me. I would put the darn thing up and fight it, because until some one does it the ordinance isn’t going to get fixed. He could also put up a nice crank up tower with a nice stack of antennas that sits at about 15’-20’ when it’s down. Then when you when you want to operate you flip the switch to raise it to where you want it and put it down when your done.

A friend of mine lives in California in a subdivision with a crap load of covenants. His XYL talked him into moving into. Now and she regrets it because of the grief they gave her on the flowers she planted. He was telling me one day one of the Yard Nazis was snooping around and saw a wire running along the rain gutter and sent him a citation for having an outside antenna. He fought it and lost, of course this was before the PRB-1. Being a lawyer he did some research and got even. He went out to an auction where they sell used utility trucks and bought a ladder truck that came from a sign company. He placed insurance and plates on it and installed his antennas on the top of the ladder. So when he gets home from work he backs it out of the carport and raises the ladder/antennas up to fifty feet and operates. They took him to court and he fought it and won. The judge not only sided with him but awarded him with quite a bit money of in legal fees he then
proceeded to tell them if they had just left him alone about the little wire on the rain gutter this could have been completely avoided.

Of course, this will still constitute a violation when it is fully extended,
and I would hate to be only able to operate at night, assuming my
neighbors are so stupid that they would not get the picture about it
going up and down, and complaining about it in any case.
Much better to get permission than to seek forgiveness, no matter
what the other guys tell you.

I think I offered to help him research it...

Fun story about the guy in California. Of course, the PRB-1 only
applies to municipal ordinances and zoning regulations, and not
to contract will covenants in subdivisions that are deemed personal
contracts, you "agreed" to when you purchase the property, as
opposed to public regulations. Still, the California story is a
good one.

Subject: Ken Update

Greetings!

Ken is settling in a home and getting lots of rest (and ice cream).

Chuck and Sherry would like to have visiting hours for Ken as follows:

10am to Noon

3pm to 5pm

6:30pm to 7:30pm

Address same as for cards - below

As with Hospice, we ask that the visits be 15 minutes to not fatigue Ken.

Times may change if Ken is not up to visiting or may be asleep.

It is ok to call Chuck and Sherry to see if Ken's up for a visit.

Phone is 616-399-9309

Cards can be sent to: Ken Groom

3149 Joshua Court

Holland, MI 49424

By the way, I have taped all the cards to his walls and it's looking pretty good. He truly delights in receiving cards & letters. We do read each to him along with the blog notes.

Chuck and Sherry ask that you leave your shoes in the entry please.

(old Japanese habit we've gotten into)

There are two items being discussed here:

A. The tower restrictions in GH Township. I would not recommend that you ignore the rules. You have a 6 month project in front of you. Take your time, contact the ARRL, take a look at the city of Grand Rapids ordinance, and Georgetown Townships'. Both are on line. Talk to Abe, W8HVG, he did most of the work to change the city GR to what it is today. Take two to three months to prepare your case to the township. Get a letter from Bill Smith from Ottawa EMS. Then take three of you, dressed nicely. Leave the baseball caps and T-shirts home. Polo shirts or nice shirts with ties (I'm really serious about this part), and have a very nice and very polite talk. Ask for the township to modify the zoning, and tell them that you would like this done within the next three months. Which is usually what is needed for a government agency to legally change items (The new verbiage and proposed change needs to be announced, with a comment and waiting time). It will take 6 months, but it has been done before. Be prepared and be nice.
It will take time. But you have a 95% chance of doing it properly.
Oh, take the time to talk to each board member if you can. You may have to watch the rules for open meeting rules. Again, the ARRL has help in this area. The GR ordinance shows a great practical height limit. No need to demand for a 150 foot tower.

B. Tower verses wire antennas. Wire antennas work. I have a balanced fed dipole up 30 feet that worked a bunch of Europeans this morning. But a beam on a tower works better. I will be putting up a 35 footer next spring to hold a Steppir that is still in the box in the box. I need to put this up to keep K8AJ happy. Got to keep her happy!

I ran into the same thing about 15 years ago, and I live in the sticks on 10 acres. I had to get a variance, support from other township resident hams, letters of support from public service agencies, etc. In the end, we made enough of an impression the planing board invited us to work with them to amend the ordinance. Hams can now go up to 200 feet in the rural-agriculture areas and 60 feet in the residential areas.

Here AND in Grand Haven. WHERE ARE US HAMS WHEN THESE RESTRICTIONS ARE BEING IMPLEMENTED IN THE FIRST PLACE? We need to do a better job of watching the public notices and being active before and during the public meetings! Even if you will never be erecting a tower, for your property, this needs to be YOUR decision.

I've found out from the township zoning administrator what my restrictions are for putting up a tower. I don't think they are "reasonable accommodation"!!!

Hams are exempt, but only allowed up to 35 feet from the ground (including antenna). A special land use only applies to commercial land. I would need to seek a variance, which could be difficult. Could put one on the roof, no matter the height of the roof.

DCC Forum Schedule Announced and Available at:

http://www.tapr.org/pdf/DCC_2008_Schedule_Preliminary.pdf (and may be attached)

DCC Presentations Include:

Bob Bruninga, WB4APR, APRS

Phil Harman, VK6APH, Software Defined Radio

Rick Muething, KN6KB, New Soundcard Mode for Winlink

Paul Rinaldo (ARRL), W4RI, SDR

Larry Wolfgang (ARRL) , WR1B, QEX Editor

D-STAR Technical & Introductory Presentations AND D-STAR Friday Night Get Together including
- Robin Cutshaw, AA4RC, DV Dongle, dplus, D-STAR Reflectors & more
- Pete Loveall, AE5PL, D-PRS
- Dan Smith, KK7DS, D-RATS & D-STAR Digital Messaging
- Ray Novak, N9JA, Icom

Banquet Keynote Speaker, Tom Clark, K3IO, AMSAT

and many more...

Register for the DCC at: www.tapr.org/dcc

ARRL, TAPR Prepare for Digital Communications Conference in Chicago, September 26 - 28

Aficionados of digital communications are gearing up for the 27th annual ARRL/TAPR Digital Communications Conference (DCC) September 26-28 in Chicago, Illinois. The ARRL/TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The DCC is for all levels of technical experience -- not just for the expert. Not only is the conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications; introductory sessions are scheduled throughout the conference to introduce new technical topics for both beginners and experts.

Topics at the DCC include, but are not limited to: Software defined radio (SDR); digital voice (D-STAR, P25, WinDRM, FDMDV, G4GUO); digital satellite communications; Global Position System (GPS); precision timing; Automatic Position Reporting System (APRS); short messaging (a mode of APRS); Digital Signal Processing (DSP); HF digital modes; Internet interoperability with Amateur Radio networks; spread spectrum; IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio; using TCP/IP networking over Amateur Radio; mesh and peer-to-peer wireless networking; emergency and Homeland Defense backup digital communications; using Linux in Amateur Radio; updates on AX.25, and other wireless networking protocols.

QEX Editor Larry Wolfgang, WR1B, will represent the ARRL at the Conference. He will also be giving a talk "Writing for Publication -- It's Not Rocket Science (Even if You Are Writing About Rocket Science!)." Retired ARRL Chief Technology Officer Paul Rinaldo, W4RI, will also represent the League. Rinaldo will speak on "SDR Outlook."

The DCC provides a separate (and lockable) room for participants to bring and show off their latest projects. Tables and power will be provided. Participants are encouraged to bring their own equipment and display for all to see, learn, and ask questions about, as well as a small sign and/or flyer naming and describing their project.

D-STAR digital voice and data will be the focus of the DCC Friday evening session. Pioneers and leaders in D-STAR digital voice and data technology will be presenting the technical innovations in D-STAR and how it is being used worldwide. In addition to the Friday evening session, ICOM will be at the DCC demonstrating D-STAR radios in the demonstration room, and TAPR's 70 cm and 23 cm D-STAR digital voice and data repeaters (KT7APR) with Internet gateway will be on the air.

Sunday Seminar Speaker Announced

Each year, the DCC hosts an in-depth 4 hour seminar on Sunday. Past seminars have included such topics as Software Defined Radios, Spread Spectrum Design and Theory, RD Design and Deployment, PICmicro MCU Design and Development, Packet Radio Networks with Millions or Billions of Stations and others. Seminars are given by experts in their field -- this year is no different. Phil Harman, VK6APH, will present "Software Radio Through the Looking-Glass."

Harman, licensed for more than 40 years, has worked on leading-edge RF techniques related to receivers and transmitters. His current passion is the development of fully digital HF radios. Harmon co-writes the Software Defined Radio column in the RSGB Radio Communications journal and also co-authored the SDR chapter in the latest RSGB Handbook. He will guide participants through the basics of SDRs right up to the very latest techniques that digitize signals directly at the antenna socket. Using diagrams and a minimum of math, Harmon will cover such subjects as front end design, mixers, I and Q signals, digital up and down conversion, AGC techniques, noise blanking and high efficiency power amplifiers. The presentation will be highly interactive, so be sure to bring along that question that has been puzzling you for so long!

Conference presentations, meetings, and seminars will be held at the Holiday Inn Hotel Elk Grove Village, Illinois. It is highly recommended that participants book rooms prior to arriving. A block of rooms at the special DCC room rate of $89.00 single/double is available; this rate is good until the block is all sold out. The hotel provides a complimentary shuttle to and from O'Hare Airport.

4521. Morley receive site grounds maintenance and campfire/cookout.

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-16 13:12:25 UTC
From: Jack Amelar
Topic: 4521 Message: 4521

LARC members, other club members, family, friends, guests, anyone interested.
RE: Morley receive site grounds maintenance and campfire/cookout.

An event we haven't done in a long time is a weekend campfire
gathering. We also should do one more site cleanup at the Morley receive site.
Sooo, Saturday, September 20, CAMPFIRE-COOKOUT at the Morley receive
site. Input "3800 155th Ave, Morley, Mi 49336" in your favorite
maping software or website. Figure about 6PM, I'll provide burgers and dogs,
bring something to pass. You might want to bring a chair as well.

Now for more details. I'll arrive with my motorhome Friday afternoon,
and since I'm taking vacation the following week, leave when I'm good
and ready to. Anyone else feel like a camping trip out in a rural
area with mix of trees and open areas near a buffulo and elk ranch is
also welcome to bring your gear. Electricity is available, bring
extension cord, you'll need to bring water, etc. Saturday will be site
cleanup, figure about 10AM start. Cookout / campfire at 6PM. IF YOU
HAVE TO CHOOSE, do the evening campfire. Not a lot has to be done
during the day, we'll manage just fine. Anyone who was around when we
first raised our antennas on the Morley tower remember the good time
and comeradaty we had the night before and during the antenna work
should look forward to the
weekend. Of course, ALL ARE WELCOME including family, friends, guests. Talk-in
145.27-(ctcss94.8Hz), you will have no problem accessing the repeater
as you approach the Morley tower. I will also have my cell phone.

Subject: [tapr-announce] DCC - Advanced Online Registration Closes Wed Sep 17th

ARRL and TAPR Digital Communications Conference
September 26-28, 2008
Chicago, IL

http://www.tapr.org/dcc

Advanced online registration for DCC will close midnight Wednesday Sep. 17th as the TAPR office moves its way to the DCC hotel in Chicago. Registration will be available at the door.

Be sure to make your food reservations now to ensure that a meal is available for you. A food count has to be given to the hotel in advanced and only a limited number of extra meals will be order for sale at the door.

See you at the DCC!

All:

I'm building a tower and I'll eventually get to the point of putting tension on the guy wires. Can I borrow your Chicago grip (affectionately called a pork chop) for 3/16" EHS and a Loos tension gauge?

Thanks!

Bill, AB8SC
MAARC guy

4528. Ken Groom ZR5AAD Update

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-18 14:20:44 UTC
From: Steve Vander Hill
Topic: 4511 Message: 4528

From: Guelda A Saylor
Sent: Wednesday, September 17, 2008 10:26 PM
To: VanderHill, Steve; Spencer, Lou; Seidelman, John & Sue; Robinson, Drew; Rich, Chuck; Mokma, Ron; Heyboer, Ed; Gregory, Charlie; Dandrea, Chris
Subject: update on Ken Groom's condition

Update on Ken Groom's condition:

This afternoon we visited Ken, (and Sherry too).

More effects of the brain tumor are taking place, specifically more degeneration of Ken's speach, mobility, stability, memory, and as he tires more easily now the effects are becoming much more evident. If I understood Sherry correctly, tomorrow Ken will be provided a hospital bed, along with other items to assist with his care at home.

Many of you probably know that Ken loves to ride in his friend's helicopter. Tomorrow they are going to try to get him out of the house so he may have one last ride in the helicopter, which will probably be the last time Ken will be able to get out of their home...until he is re-admitted to the Hospice House. Please pray that Ken will be more rested and a little stronger tomorrow so that he will be able to get out to enjoy that helicopter ride!

Please continue to remember Ken in your prayers, along with Sherry and Chuck as well.

Blessings,

Guelda

4529. 23rd Annual SW Ohio Digital Symposium, January 10 2009

Call for Papers, 23rd Southwest Ohio Digital & Technical Symposium

We are currently soliciting authors and papers for the 23rd Annual Southwest Ohio Digital & Technical Symposium, to be held on 10 January 2009. This event will cover subjects concerning any digital mode of communications, plus "leading edge" discussions of new technologies in the analog modes.

If you're experimenting in any of these areas, we'd like to hear from you! Please send your ideas to Jay Slough, K4ZLE, 2554 Hamilton Road, Lebanon, OH 45036-8849, Phone: 513-934-0235,
Email: k4zle <at> embarqmail <dot> com

The symposium will run from 8:00 a.m to about 4:00 p.m. EST, in Thesken Hall, Middletown Campus, Miami University, Middletown, Ohio.
For details on past events, and up to date plans for 2009 see http://www.swohdigi.org

Subject: Important Update re Ken Groom

Dear Volunteers,

Ken has been moved back to the Hospice House (on 104th between 16th St & 24th St).

His condition has worsened...quite rapidly between last night and by noon today.

Please contact me as to when you will be available to sit with Ken at the Hospice House.

I have attached the sitting comfort schedule for us to use for the next couple weeks, so

please check the open time slots as to which will work for you. Please call me if you have

any questions. H 399-5670 C 616-502-2225

Thank you all for your help!

XOXO

Guelda

4531. D-STAR at the DCC (Digital Communication Conference)

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-18 20:24:05 UTC
From: Mark Thompson
Topic: 4531 Message: 4531

The DCC (Digital Communications Conference) is the premiere, national digital communication conference covering all digital voice & data modes held annually jointly by TAPR & ARRL.

The DCC is being held on September 26 - 28 in suburban Chicago near O'Hare airport.

This year D-STAR will have a significant presence at the DCC.

Icom has donated to TAPR a 1.2 GHz D-STAR digital voice repeater and data access point and TX RX has donated a 1.2 GHz triplexer. They will be combined with TAPR's 70cm D-STAR digital voice repeater using the TAPR callsign, KT7APR and connected to the D-STAR internet gateway. The repeaters will be operating & on display at the DCC and will allow D-STAR access within the hotel.

Ray Novak, N9JA of Icom will be at the DCC and have a display in the demonstration room.

On Friday night we're having the first ever D-STAR Friday Night Get Together at 7 pm. The agenda is below. Even if you can't attend the DCC daytime sessions we encourage you to attend the D-STAR Friday Night event.

On Friday there is a D-STAR technical session and on Saturday there are three D-STAR Introductory sessions.

The list of the speakers & topics at the D-STAR Friday Night event and the D-STAR Technical & Introductory sessions are below.

The DCC was last in Chicago in 1998 and won't be back again for a few years so you won't want to miss it, especially if you're near northern Illinois & the Chicago area.

73, Mark, WB9QZB
Chicago, IL

D-STAR Friday Night Get Together, 9/26 @ 7 pm
- Mark Thompson, WB9QZB, Introductions
- Ray Novak, N9JA, Icom
- Dan Smith, KK7DS, D-RATS Demo
- Pete Loveall, AE5PL, D-PRS Update
- Robin Cutshaw, AA4RC, DV Dongle, dplus, D-STAR Reflectors & more Update
- Kermit Carlson, W9XA, DCC & Chicago D-STAR Repeaters
- Q&A

D-STAR Technical & Introductory Presentations
- Friday, 9/26, 2:30 pm - D-STAR Uncovered, Pete Loveall, AE5PL
- Saturday, 9/27, 10:00 am - Intro to D-STAR Digital Voice & Data, Mark Thompson, WB9QZB
- Saturday, 9/27, 11:00 am - Intro to D-PRS, Pete Loveall, AE5PL - Saturday, 9/27, 1:00 pm
- Intro to D-STAR Digital Messaging & D-RATS, Dan Smith, KK7DS

DCC Forum Schedule Available
at: http://www.tapr.org/pdf/DCC_2008_Schedule_Preliminary.pdf (and may be attached)

Other DCC Presentations Include:

Bob Bruninga, WB4APR, APRS

Phil Harman, VK6APH, Software Defined Radio

Rick Muething, KN6KB, New Soundcard Mode for Winlink

Paul Rinaldo (ARRL), W4RI, SDR

Larry Wolfgang (ARRL) , WR1B, QEX Editor

Tom Clark, K3IO, AMSAT & Banquet Speaker

and many more...

Register for the DCC at: www.tapr.org/dcc

Walk-In Registration Available & Welcome

ARRL, TAPR Prepare for Digital Communications Conference in Chicago, September 26 - 28

Aficionados of digital communications are gearing up for the 27th annual ARRL/TAPR Digital Communications Conference (DCC) September 26-28 in Chicago, Illinois. The ARRL/TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The DCC is for all levels of technical experience -- not just for the expert. Not only is the conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications; introductory sessions are scheduled throughout the conference to introduce new technical topics for both beginners and experts.

Topics at the DCC include, but are not limited to: Software defined radio (SDR); digital voice (D-STAR, P25, WinDRM, FDMDV, G4GUO); digital satellite communications; Global Position System (GPS); precision timing; Automatic Position Reporting System (APRS); short messaging (a mode of APRS); Digital Signal Processing (DSP); HF digital modes; Internet interoperability with Amateur Radio networks; spread spectrum; IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio; using TCP/IP networking over Amateur Radio; mesh and peer-to-peer wireless networking; emergency and Homeland Defense backup digital communications; using Linux in Amateur Radio; updates on AX.25, and other wireless networking protocols.

QEX Editor Larry Wolfgang, WR1B, will represent the ARRL at the Conference. He will also be giving a talk "Writing for Publication -- It's Not Rocket Science (Even if You Are Writing About Rocket Science!)." Retired ARRL Chief Technology Officer Paul Rinaldo, W4RI, will also represent the League. Rinaldo will speak on "SDR Outlook."

The DCC provides a separate (and lockable) room for participants to bring and show off their latest projects. Tables and power will be provided. Participants are encouraged to bring their own equipment and display for all to see, learn, and ask questions about, as well as a small sign and/or flyer naming and describing their project.

D-STAR digital voice and data will be the focus of the DCC Friday evening session. Pioneers and leaders in D-STAR digital voice and data technology will be presenting the technical innovations in D-STAR and how it is being used worldwide. In addition to the Friday evening session, ICOM will be at the DCC demonstrating D-STAR radios in the demonstration room, and TAPR's 70 cm and 23 cm D-STAR digital voice and data repeaters (KT7APR) with Internet gateway will be on the air.

Sunday Seminar Speaker Announced

Each year, the DCC hosts an in-depth 4 hour seminar on Sunday. Past seminars have included such topics as Software Defined Radios, Spread Spectrum Design and Theory, RD Design and Deployment, PICmicro MCU Design and Development, Packet Radio Networks with Millions or Billions of Stations and others. Seminars are given by experts in their field -- this year is no different. Phil Harman, VK6APH, will present "Software Radio Through the Looking-Glass."

Harman, licensed for more than 40 years, has worked on leading-edge RF techniques related to receivers and transmitters. His current passion is the development of fully digital HF radios. Harmon co-writes the Software Defined Radio column in the RSGB Radio Communications journal and also co-authored the SDR chapter in the latest RSGB Handbook. He will guide participants through the basics of SDRs right up to the very latest techniques that digitize signals directly at the antenna socket. Using diagrams and a minimum of math, Harmon will cover such subjects as front end design, mixers, I and Q signals, digital up and down conversion, AGC techniques, noise blanking and high efficiency power amplifiers. The presentation will be highly interactive, so be sure to bring along that question that has been puzzling you for so long!

Conference presentations, meetings, and seminars will be held at the Holiday Inn Hotel Elk Grove Village, Illinois. It is highly recommended that participants book rooms prior to arriving. A block of rooms at the special DCC room rate of $89.00 single/double is available; this rate is good until the block is all sold out. The hotel provides a complimentary shuttle to and from O'Hare Airport.

Register for the DCC at: www.tapr.org/dcc

Subject: Ken Groom update

Ken is back at Hospice House and is resting comfortably. We ask that you refrain form phone calls at this time. Visiting hours will be posted tomorrow evening and we request that all visit be limited to 5 minutes. Visits are really tiring and Ken needs to conserve all his energy.

We will still read emails and the blog posts to him so you can send messages that way instead of phone calls.

For those with access, there will be more detailed information on the website. The website is limited to very close friends and family who do not live close by.

Chuck and Sherry

Subject: update re visitation for Ken Groom

Just called Hospice and they have posted a sign in the entry/reception area that

no visitors are being allowed for Ken.

Please continue to pray for Ken, plus for Sherry, Chuck and family.

Will try to keep you all informed of any changes that we become aware of.

Steve, could you please post this on the club reflector?

Thank you all,

Guelda XOXO

Subject: condition update

Hello everyone,

Just spoke with Debbie, Sherry's sister. Debbie said Ken's condition has deteriorated more.

Ken is very very weak. Ken is not able to push or scoot himself up in the hospital bed if he has

slidden down. It sounded like he is unable to sit up on the side of the bed now without someone

holding him. Ken is requiring more nursing and caregiving assistance.

Debbie said there are many finanical needs/concerns occurring with Ken's care, etc., and to

remind everyone about the donation account information and ask everyone to pass along

the information to other's that know Ken as you are talking personally and/or around the world!

Thank you all for helping Ken,

Guelda XOXO

(Reply only to k8je@...)

FREE AMATEUR RADIO KIT BUILDING WEBINAR -- Last moment registration

This is a last-moment reminder of the Webinar described below. It is
proving to be rather popular -- we are approaching 200 registrants.

Join us for a Webinar on September 22

Webinar Title: Amateur Radio Kit Building Webinar

Date: Monday, September 22, 2008

Time: 8:00 PM - 9:30 PM EDT

System Requirements

PC-based attendees
Required: Windows? 2000, XP Home, XP Pro, 2003 Server, Vista

Macintosh?-based attendees
Required: Mac OS? X 10.4 (Tiger?) or newer

Space is limited.
Reserve your Webinar seat now at:
https://www1.gotomeeting.com/register/487131608

Audio is via telephone and the web. There is no charge to participate.

The Great Lakes Division's own Dan Romanchik, KB6NU will provide the
online seminar that shows how simple it is to build many pieces of
equipment that are useful to radio amateurs. Dan lives in Lansing, MI
and is the ARRL Affiliated Club Coordinator for the Michigan Section. He
has considerable experience in building kits.

In his Webinar, even the most uninitiated participant will learn how
simple it is to assemble many useful and relatively inexpensive kits
being sold today as well as many pieces of equipment that are described
in QST and other electronics journals.

In addition to being able to build useful equipment, kit builders have
the great satisfaction of saying "look at this piece of gear I built" to
family and friends.

NOTE: A few members have had difficulty in registering for these Webinars. In all cases of which I am aware, the problem has been with their web browser. Changing web browsers has solved the problem.

We regret that some members may not have operating systems required to participate in the Webinar. Fortunately, most do. The requirements are established by the owner of the Webinar service and not by any of us who are involved in providing this series of Webinars.

Thanks to Director Bill Edgar, N3LLR of the ARRL Atlantic District for providing access to the Webinar system to us in the Great Lakes Division.

73,

Jim

Subject: Ken Groom update

Dear Volunteers,

Just Retrieved a message from Sherry and they would like volunteer sitters, especially in the

mornings while Sherry is working. I am starting a new job tomorrow and will only be available to in the later evenings to maintain the scheduling and contacting, so if you are able to take a time please let me know today so I may e-mail Sherry & Chuck the schedule tonight. Sherry needs to give the nurses a copy tomorrow morning.

Yesterday I spoke with Debbie, Sherry's sister, she said that it is best to keep things calm around Ken, minimal talking, and hold his hand for comforting him. Also just got off the phone with Chuck and he said Ken is basically not eating anything now, opens his eyes sometimes but they are not sure if he even knows it, nor how much he is comprehending. Chuck said they think if will not be too much longer before Ken passes. Also, Chuck said if you or anyone you know still wants to make a donation at Macatawa Bank it needs to be done right away as they will need to close the

account soon. The name of the account is: "Ken Groom (ZR5AAD) Medical Donation Account".

Thank you all for your prayers and support to Ken, Sherry and Chuck.

Blessings,

Guelda

4542. Ken Groom ARC Merit/Honor & HARC Award/Renaming

Subject: Re: Minutes for the Holland Amateur Radio Club business meeting for September 9th 08

Hi Steve,

I want you to tell the everyone that Ken received (on the same day) the award from the Ham Radio Club and an award of merit /honor from the American Red Cross.

He's sleeping a lot, but when I was wake, I read to him slowly everything on the awards and specifically that the Ham Radio Tech Center was now HIS house and named after him.

His blues eyes widened and he kept saying..."That's Amaazzing...that's amazing...."
I bought the ham club award closer to him and he wanted to hold it and just look at it. So, my dear friends, Ken is very honored and aware of your final gift to him.

On behalf of Ken and ourselves, thank you from the bottom of our hearts.

Hugs to all,

Sherry Krueger

Subject: Ken Update

I am sorry to say this but Ken is slipping fast. He is spending most of his day sleeping and is not eating. This morning, he was unresponsive to the nurse. When the inevitable happens, and it appears it will be soon, I will sent out notifications via email. There are too many people to call, and scattered over too many time zones, so email seems to be the best method of notification. I will also post information on the web site and the blog.

Sherry is taking the rest of hte week off work to be with Ken. We will still have the volunteer caregivers so those who are scheduled we would appreciate it if you would continue. There will be many things for Sherry and I to do and having others there to sit with Ken provides us the time to do them.

Chuck and Sherry

Hi, everyone.

Here's an opportunity that might be valuable for newly-licensed hams, or even hams who still have questions after being on the air for a while.

Either way, come join the Big Rapids Area Amateur Radio Club New Ham Orientation Class if you're interested.

See attachment.

To add to the info in the attachment, the Big Rapids Department Of Public Safety Building is located at 435 N. Michigan in Big Rapids.

4547. DCC D-STAR Friday Night Forum & D-STAR Technical / Introduction Presentation Schedules

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-23 03:01:21 UTC
From: Mark Thompson
Topic: 4547 Message: 4547
Attachments: 2 described; binary payloads are missing from this source WARC

D-STAR Enthusiasts -

This year for the first time at the DCC we will have a D-STAR Friday night forum.

Some of the major innovators in the D-STAR community will be presenting at the event.

Friday Night D-STAR Forum

7 pm Introductions, Mark, WB9QZB

7:15 pm DCC & Chicago D-STAR Repeater Update, Kermit, W9XA

7:30 pm Icom & D-STAR USA Update, Ray, N9JA

7:45 pm D-RATS Demo, Dan, KK7DS

8 pm D-PRS Update, Pete, A5PL

8:15 pm DV Dongle / dplus / Reflector / New Projects Update, Robin, AA4RC

9 pm Q & A / Socializing

If you have an interest in D-STAR the Friday night forum should be very interesting and you should try to attend it even if you hadn't planned on the attending the DCC on Friday or Saturday.

In addition to the Friday night forum there are several other D-STAR related presentations at the DCC on Friday & Saturday.

Friday DCC
 2:30 pm D-STAR Uncovered, Pete, AE5PL

Saturday DCC
10 am Intro to D-STAR, Mark, WB9QZB
11 am Intro to D-PRS, Pete, AE5PL
1 pm Intro to D-RATS & D-STAR Messaging, Dan, KK7DS
1 pm It's the Network, Erik Westgard, NY9D

Erik, NY9D's presentation includes a description of D-STAR high-speed data usage in the Minneapolis area.

TAPR's 70cm & 23cm D-STAR digital voice repeaters using the TAPR callsign, KT7APR will be operating at the hotel & connected to the D-STAR internet gateway providing D-STAR access within the hotel.

The DCC was last in Chicago in 1998 and won't be back again for a few years so you won't want to miss it.

More information available at:

DCC Information
http://www.tapr.org/dcc

DCC Forum Schedule
http://www.tapr.org/pdf/DCC_2008_Schedule_Preliminary.pdf

Look forward to seeing everyone at the DCC.

New or needed items this week at the Store

I have 2-3 request for HF antenna tuners VHF HT's or VHF mobile radios. If you have one bring it in for a sure sale

Wagan Power Zone Portable AC Power with 150 watts power inverter. Use for a UPS, Jump start box or a battery for a radio. $25.00
1 GPS III Garmin GPS unit with power/data cable wired for APRS $75 or best offer
1 GPS external antenna for above $50 or best offer
1 Radio Shack PRO 2018 200 channel Scanner $50 or best offer
1 Cushcraft 230 WB Boomer 2 meter Beam with 230VPK Stacking Kit New never used $175.00

We have Antennas, connectors, and mounts from Tower Electronics. We are a Dealer for Tower and have put them in Stock.

Other New items in Stock

14 Amp Jetstream Power Supply $55
28 Amp Power Supply $90
45Amp Power Supply $170
Lighting Arresters $21.50 ea
HF Antenna 20 Meter, 40 Meter, 75 Meter Fiberglass Hamsticks in Stock $20 each
New SWR Watt/Power & Field Strength Meter for 1.7-150 MHz in Stock $30
J Pole Antennas in Stock $15
RG-58 Cable .25 per foot
RG-8 .$1.00 per Foot
RG-8X Coax Cable .50 per Foot
75 ohm Cable 9040 International Wire and Cable .35per foot
PL-259 Connectors $3.25 ea adadapters for RG-58 or RG-8X $1.10 ea
BNC - SO-239 Connectors $2.50 ea
Double Female Connectors $2 ea

We also have Diagonal Pliers, Digital Multi Testers, Electrical Tape,Precision Screwdrivers Sets, Soldering guns, Irons and Industrial Batteries for your HT's

We are the only stocking Dealer in Michigan for W5YI Gordon West Study Manuals.

Technician Class $18.95
General Class $20.95
Extra Class $24.95
FCC Part 97 rule book only $3.95
ARRL Level 1 Amateur Radio Emergency Communications Course Level 1 books $16 each

Ramsey Kits for Kids (or Adults)

300 in 1 Electronic Lab $70
Bell Action Kit $9

Motor Action Kit $8
LED Binky Kit $8
Police Siren Kit $8
Electronic Dripping Faucet $10
LED Strobe Light with Case $45
AM Broadcast Transmitter Kit with Case $35
Tri-Field Meter $64

Other Used Equipment on Consignment

1 SMC 7004BR 4 port Computer Hub $5
1 GW GDM 8135 Digital Multimeter $30
MFJ-202B Noise Bridge $40 or best offer
PC-1A Kenwood Phone Patch $40
#425 B+W Low Pass Filter $15
MFJ-704 Low Pass Filter $20
11 Element 2 meter Beam $45
IC-255A 2 meter Radio with no tone board Like New from 1982 Good Packet Radio $45
Tubes A great Assortment of tested used Tubes $1-$4 each
B&K Model 4011 Precision function Generator $60
B & W Antenna Tuner VS-300A $40
RCA Volt Ohm Meter $25
Barket & Williamson Low Pass Filter $5
Speakers $2
Barket and Williamson Rotary Inductor and Counter for Antenna Tuner $50
Center Insulator for HF antenna $5
LED Emergency Light $10
Motorola consolette Base Station for packet set up on 145.090 $45
MFJ-722 Notch Filter $30.00
Low Pass filter $5
EICO Solid State FET/TVM Model 240 VOM in good condition $40
2-9 inch clamps to mount antenna on large poles or vent pipes $5.56 each and less for smaller ones

Heathkit items in stock

Model HD-19 Hybrid Phone Patch for $5
2 HD-15 Phone Patch for $5 each
Heathkit Drive Belts for SB-100, 101,102, HW 100,HW101 $3

Tool Max Industrial Supply is the Tool and Ham Radio retail store on Schamber Dr just off Pontaluna Rd and US-31 just north of the old Hob Knob or Michael's Restaurant (Now tore down) in Muskegon . The DCC (Digital Communications Conference) is in Chicago on September 26 - 28.

On Friday, 9/26 at 1:45 pm Bob Bruninga, WB4APR is presenting Frequency and Other New Initiatives in APRS since 2004

On Saturday, 9/27 at 11 am Pete Loveall, AE5PL is presenting Intro to D-PRS

DCC Forum Schedule Available at:
http://www.tapr.org/pdf/DCC_2008_Schedule_Preliminary.pdf (and may be attached)

DCC Presentations Include:

Bob Bruninga, WB4APR, APRS

Phil Harman, VK6APH, Software Defined Radio

Rick Muething, KN6KB, New Soundcard Mode for Winlink

Paul Rinaldo (ARRL), W4RI, SDR

Larry Wolfgang (ARRL) , WR1B, QEX Editor

D-STAR Technical & Introductory Presentations AND D-STAR Friday Night Get Together

Banquet Keynote Speaker, Tom Clark, K3IO, AMSAT

and many more...

Register for the DCC at: www.tapr.org/dcc

Walk-In Registration Welcome!!

http://www.arrl.org/news/stories/2008/09/11/10327/?nc=1

ARRL, TAPR Prepare for Digital Communications Conference in Chicago, September 26 - 28

Aficionados of digital communications are gearing up for the 27th annual ARRL/TAPR Digital Communications Conference (DCC) September 26-28 in Chicago, Illinois. The ARRL/TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The DCC is for all levels of technical experience -- not just for the expert. Not only is the conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications; introductory sessions are scheduled throughout the conference to introduce new technical topics for both beginners and experts.

Topics at the DCC include, but are not limited to: Software defined radio (SDR); digital voice (D-STAR, P25, WinDRM, FDMDV, G4GUO); digital satellite communications; Global Position System (GPS); precision timing; Automatic Position Reporting System (APRS); short messaging (a mode of APRS); Digital Signal Processing (DSP); HF digital modes; Internet interoperability with Amateur Radio networks; spread spectrum; IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio; using TCP/IP networking over Amateur Radio; mesh and peer-to-peer wireless networking; emergency and Homeland Defense backup digital communications; using Linux in Amateur Radio; updates on AX.25, and other wireless networking protocols.

QEX Editor Larry Wolfgang, WR1B, will represent the ARRL at the Conference. He will also be giving a talk "Writing for Publication -- It's Not Rocket Science (Even if You Are Writing About Rocket Science!)." Retired ARRL Chief Technology Officer Paul Rinaldo, W4RI, will also represent the League. Rinaldo will speak on "SDR Outlook."

The DCC provides a separate (and lockable) room for participants to bring and show off their latest projects. Tables and power will be provided. Participants are encouraged to bring their own equipment and display for all to see, learn, and ask questions about, as well as a small sign and/or flyer naming and describing their project.

D-STAR digital voice and data will be the focus of the DCC Friday evening session. Pioneers and leaders in D-STAR digital voice and data technology will be presenting the technical innovations in D-STAR and how it is being used worldwide. In addition to the Friday evening session, ICOM will be at the DCC demonstrating D-STAR radios in the demonstration room, and TAPR's 70 cm and 23 cm D-STAR digital voice and data repeaters (KT7APR) with Internet gateway will be on the air.

Sunday Seminar Speaker Announced

Each year, the DCC hosts an in-depth 4 hour seminar on Sunday. Past seminars have included such topics as Software Defined Radios, Spread Spectrum Design and Theory, RD Design and Deployment, PICmicro MCU Design and Development, Packet Radio Networks with Millions or Billions of Stations and others. Seminars are given by experts in their field -- this year is no different. Phil Harman, VK6APH, will present "Software Radio Through the Looking-Glass."

Harman, licensed for more than 40 years, has worked on leading-edge RF techniques related to receivers and transmitters. His current passion is the development of fully digital HF radios. Harmon co-writes the Software Defined Radio column in the RSGB Radio Communications journal and also co-authored the SDR chapter in the latest RSGB Handbook. He will guide participants through the basics of SDRs right up to the very latest techniques that digitize signals directly at the antenna socket. Using diagrams and a minimum of math, Harmon will cover such subjects as front end design, mixers, I and Q signals, digital up and down conversion, AGC techniques, noise blanking and high efficiency power amplifiers. The presentation will be highly interactive, so be sure to bring along that question that has been puzzling you for so long!

Conference presentations, meetings, and seminars will be held at the Holiday Inn Hotel Elk Grove Village, Illinois. It is highly recommended that participants book rooms prior to arriving. A block of rooms at the special DCC room rate of $89.00 single/double is available; this rate is good until the block is all sold out. The hotel provides a complimentary shuttle to and from O'Hare Airport.

Subject: Re: [HARC] Re: Fw: hello from the Sault

Laryn & Ed
This morning Sherry read the Denny`s post on Ken`s blog to Ken. Sherry prints out every message form Kens email and his blog. Then she reads them to Ken each morning. Also this morning the hams & friends from S. Austria got to say their thoughts and wish`s to Ken on the IRLP link. The local hams got do the same on the 147.060 repeater as well. Ken was verry responsive to each one of his friends contacts.. He even tried to speak, and would turn his head toward my hand held radio. Sherry and I where surprised at how he would perk up for the next contact, on the radio. This has ment so much for Ken to hear from some of his close friends. Ken has and will always be an inspreaction to myself and a lot of other s as well. Last night I did not get much sleep, due to thinking how this would affect Ken... But when Ken heard each one of the contacts he would want to hear more. It was a pleasure to do.
So I and Sherry want to thank each one of you for making Kens day and ours a little more cheerful in his time of need. Ken is resting comfortable and needs all of his strength just to survive. please keep Ken , Sherry & Chuck in your prayers. Also a big big thank you to Hospice & their staff for the verry kind way they have delt with Ken Groom (ZR5AAD) and his caregivers. the have been way more than excellent...
Again Thanks to all of Kens friends for making this happen...
As Ken would say Cheers.....
Charlie

Steve,
Bev here from over in Nunica.

It's been years since I last spoke to Ken on the air, but I believe at one time I had his QSL card.

Last year I gave a ham radio demonstration to some elementary students and passed out many of my old cards to the kids. If I had one from Ken, I'm thinking I very likely gave it to one of the students.

Would you know of a way to get a scan of Ken's QSL card? I would like one.

I have read for days your updates concerning Ken and thank you for that.

Bev

The DCC (Digital Communications Conference) is in Chicago on September 26 - 28.

On Saturday, 9/27 at 9 am Tom Clark, K3IO is presenting AMSAT Update

On Saturday, 9/27 at 7 pm Tom Clark, K3IO is the Banquet Speaker

DCC Forum Schedule Available at:
http://www.tapr.org/pdf/DCC_2008_Schedule_Preliminary.pdf (and may be attached)

DCC Presentations Include:

Bob Bruninga, WB4APR, APRS

Phil Harman, VK6APH, Software Defined Radio

Rick Muething, KN6KB, New Soundcard Mode for Winlink

Paul Rinaldo (ARRL), W4RI, SDR

Larry Wolfgang (ARRL) , WR1B, QEX Editor

D-STAR Technical & Introductory Presentations AND D-STAR Friday Night Get Together

Banquet Keynote Speaker, Tom Clark, K3IO, AMSAT

and many more...

Register for the DCC at: www.tapr.org/dcc

Walk-In Registration Welcome!!

http://www.arrl.org/news/stories/2008/09/11/10327/?nc=1

ARRL, TAPR Prepare for Digital Communications Conference in Chicago, September 26 - 28

Aficionados of digital communications are gearing up for the 27th annual ARRL/TAPR Digital Communications Conference (DCC) September 26-28 in Chicago, Illinois. The ARRL/TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The DCC is for all levels of technical experience -- not just for the expert. Not only is the conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications; introductory sessions are scheduled throughout the conference to introduce new technical topics for both beginners and experts.

Topics at the DCC include, but are not limited to: Software defined radio (SDR); digital voice (D-STAR, P25, WinDRM, FDMDV, G4GUO); digital satellite communications; Global Position System (GPS); precision timing; Automatic Position Reporting System (APRS); short messaging (a mode of APRS); Digital Signal Processing (DSP); HF digital modes; Internet interoperability with Amateur Radio networks; spread spectrum; IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio; using TCP/IP networking over Amateur Radio; mesh and peer-to-peer wireless networking; emergency and Homeland Defense backup digital communications; using Linux in Amateur Radio; updates on AX.25, and other wireless networking protocols.

QEX Editor Larry Wolfgang, WR1B, will represent the ARRL at the Conference. He will also be giving a talk "Writing for Publication -- It's Not Rocket Science (Even if You Are Writing About Rocket Science!)." Retired ARRL Chief Technology Officer Paul Rinaldo, W4RI, will also represent the League. Rinaldo will speak on "SDR Outlook."

The DCC provides a separate (and lockable) room for participants to bring and show off their latest projects. Tables and power will be provided. Participants are encouraged to bring their own equipment and display for all to see, learn, and ask questions about, as well as a small sign and/or flyer naming and describing their project.

D-STAR digital voice and data will be the focus of the DCC Friday evening session. Pioneers and leaders in D-STAR digital voice and data technology will be presenting the technical innovations in D-STAR and how it is being used worldwide. In addition to the Friday evening session, ICOM will be at the DCC demonstrating D-STAR radios in the demonstration room, and TAPR's 70 cm and 23 cm D-STAR digital voice and data repeaters (KT7APR) with Internet gateway will be on the air.

Sunday Seminar Speaker Announced

Each year, the DCC hosts an in-depth 4 hour seminar on Sunday. Past seminars have included such topics as Software Defined Radios, Spread Spectrum Design and Theory, RD Design and Deployment, PICmicro MCU Design and Development, Packet Radio Networks with Millions or Billions of Stations and others. Seminars are given by experts in their field -- this year is no different. Phil Harman, VK6APH, will present "Software Radio Through the Looking-Glass."

Harman, licensed for more than 40 years, has worked on leading-edge RF techniques related to receivers and transmitters. His current passion is the development of fully digital HF radios. Harmon co-writes the Software Defined Radio column in the RSGB Radio Communications journal and also co-authored the SDR chapter in the latest RSGB Handbook. He will guide participants through the basics of SDRs right up to the very latest techniques that digitize signals directly at the antenna socket. Using diagrams and a minimum of math, Harmon will cover such subjects as front end design, mixers, I and Q signals, digital up and down conversion, AGC techniques, noise blanking and high efficiency power amplifiers. The presentation will be highly interactive, so be sure to bring along that question that has been puzzling you for so long!

Conference presentations, meetings, and seminars will be held at the Holiday Inn Hotel Elk Grove Village, Illinois. It is highly recommended that participants book rooms prior to arriving. A block of rooms at the special DCC room rate of $89.00 single/double is available; this rate is good until the block is all sold out. The hotel provides a complimentary shuttle to and from O'Hare Airport.

4555. Hiker summons help with ham radio

Hiker summons help with ham radio
'It's just a stroke of luck that turned out great'

By JACKSON HOLTZ
THE (EVERETT) HERALD

EVERETT -- A series of dots and dashes bouncing off the ionosphere Sunday helped save a hiker stranded on Buck Creek Pass east of Glacier Peak.

The hiker, who broke his leg, used a low-voltage portable radio and Morse code to send out a call to help.

Six hundred miles away, in Bozeman, Mont., Robert Williams was testing his ham radio Sunday when he heard the call signal, "W-7-A-U."

Williams replied and quickly learned, in the dashes and dots, that he was talking with a 62-year-old Corvallis, Ore., man, who had slipped and hurt himself in the high Cascades of Western Washington.

"I just happened to be at the same frequency," Williams, 65, said Monday. "It's just a stroke of luck that turned out great."

Williams called 911 and was connected to Snohomish County search and rescue officials. He spent much of Sunday and Monday relaying information, including GPS coordinates, from the hiker to rescuers.

"It was quite an experience," Williams said. "I'm just glad that he was a ham radio operator and that I was able to talk to him. It made the difference for him."

On Sunday, rescue crews reached the man, who had set up camp on Buck Creek Pass, at about 6,000 feet just west of the Chelan County line.

He was taken to safety Monday on horseback.

The call set in motion one of two mountain rescues Sunday.

A second team of rescuers went up Three Fingers Mountain after a man there fell about 200 feet on a glacier near the summit.

Including the weekend rescues, search and rescue teams this year have now responded to 100 missions, Snohomish County Sheriff's Sgt. Danny Wikstrom said.

Both of the injured men in the weekend rescues were well prepared for the wilderness conditions, he said.

"To have that equipment will save your life," he said.

The man on Three Fingers was hiking with three other people when he fell. His climbing party summoned help, officials said.

On Monday afternoon, he was taken by helicopter off the mountain to Providence Regional Medical Center Everett, sheriff's Lt. Rodney Rochon said.

He wasn't able to walk when he was loaded into the chopper, Rochon said. He apparently had sprained his ankle and knee in the fall.

Bad weather Sunday prevented helicopter rescues of both men. Teams spent a night in snow and frigid conditions in the mountains.

Rescuers on Three Fingers used a pulley system to hoist the man off the glacier and onto the trail, Wikstrom said.

Teams then carried the man to Goat Flats, where he was loaded onto the chopper.

Rescuers on horseback reached the man on Buck Creek Pass on Monday morning.

The trail from Darrington was washed out from recent storms and wasn't passable, so crews approached along the Trinity Trail near Lake Wenatchee, Wikstrom said.

It isn't the first time amateur radio operators have helped out with an emergency situation, said Allen Pitts, a spokesman for the American Radio Relay League in Newington, Conn.

The radios work well when other kinds of communication fail, he said.

Ham radio operators were of paramount importance after Hurricane Katrina in 2005 and when a tsunami ravaged Southeast Asia in 2004.

Still, it's rare that Morse code is used to initiate a rescue, he said.

Amateur radio operators used to be required to know Morse code to get a license. That requirement was dropped a few years ago.

Since then, Morse code has actually gained popularity, Pitts said.

"Morse code will get through when no other type of communication will," Snohomish County Hams Club President Grant Hopper said.

Williams, the Montana man, said he was able to understand the injured man's code even when his signal became very weak. Voice communication over the airwaves likely would have become garbled or misunderstood.

The man had a low-voltage radio transmitter, which operates on about as much power as it takes to make a tiny Christmas tree light sparkle.

In the right conditions, radio signals can bounce off the Earth's atmosphere and ricochet thousands of miles.

"A signal like that can skip a long way around the world," Williams said. "You can talk to Europe or Asia given the right conditions."

This is the first time Williams has helped someone in danger using his radio.

The rescue likely wouldn't have been possible if the injured man weren't a competent radio operator, Williams said.

"My guess is that he was just waiting to hear from somebody," he said. "I happened to be the lucky one."

Note: a version of this, written mainlhy for ham radio operators, is at http://www.arrl.org/news/stories/2008/09/23/10348/?nc=1

From: Richards
Topic: 4555 Message: 4556

Right there is why I will be learning code even though I do not have to
any more. Especially the fact CW can cut through on less power
than a voice modulated signal.

Nice story.

The funeral arrangements for Ken have been finalized.

The visitation will be on Sunday, between 4 PM and 8 PM at VanZantwick-Bartels-Kammaraad Funeral Home, <http://www.vbkfuneralhome.com/> located at 620 Wahington St. Grand Haven, Mi <http://maps.google.com/maps?f=q&hl=en&geocode=&q=620+Washington,+St+Grand+haven+Mi&sll=37.0625,-95.677068&sspn=33.29802,77.695313&ie=UTF8&ll=43.061943,-86.224405&spn=0.003747,0.009484&z=17> . (link is a map). It is at the corner of Washington and 7th. Rosary will be said approximately 7pm to 7:20pm.

The service will be held at St. Mary Margaret Catholic Church <http://maps.google.com/maps?f=q&hl=en&geocode=&q=St.+Mary+Margaret+Catholic+Church+in+Allendale,+mi&ie=UTF8&ll=42.979284,-85.950508&spn=0.030015,0.075874&z=14&iwloc=A> (link is a map) located in Allendale, Mi. at 10 AM on Monday Sept 29, 2008.

Ken will be interned at Restlawn Cemetery <http://maps.google.com/maps?f=q&hl=en&geocode=&q=Restlawn+Cemetery,+Holland,+mi&ie=UTF8&ll=42.798424,-86.060672&spn=0.015052,0.037937&z=15> (link is a map) in Holland, Mi following the service/luncheon.

The following is the official Obituary. A slightly modified one, second paragraph will be missing, will be published in the Holland Sentinal newspaper today.

Death Notice for News Media

For Kenneth William Groom

September 24, 2008

Kenneth William Groom, age 56, of Holland passed away Wednesday, September 24, 2008, at Holland Hospice House. He was born August 23, 1952, in Durbin, Republic of South Africa, to Claude and Phyllis Maud (Lloyd) Groom, and moved here from South Africa 8 years ago.

Ken had been employed in High Level Access Security for Sky Com Inc. in South Africa and had previously been in bank management for Standard Bank and sales manager for Cullen's Satellite all in South Africa. He served in the South African Defense Force, was a proud member of The Republic of South Africa National Shooting Team, a member of St. Mary Margaret Church in Allendale, Holland Amateur Radio Club, EAA Experimental Aircraft and volunteered with the Red Cross (Holland Chapter) as a board member, International Red Cross of South Africa, Ottawa County EOC (Homeland Security) and as a Tulip Time marshal.

Survivors include his loving and caring USA family of friends; Charles, Sherry and Ian Krueger of Holland, Caleb and Amanda Zimmerman of London, Canada and his church family at St. Mary Margaret Church. Also, Ken's extended family in The Republic of South Africa; Candace Lotrict who he treated as a daughter, cousin, Collen Pappas, aunt, Podge Ponter and cousin, Mike Ponter in Virginia Beach, VA.

The Funeral Mass for Ken will be at 10:00 a.m. on Monday, September 29, 2008, at St. Mary Margaret Catholic Church in Allendale with Fr. Joseph Dreher as celebrant. A time of visitation with Ken's family will be Sunday from 4:00-8:00 p.m. with a rosary service at 7:00 p.m. at VanZantwick Bartels Kammerad in Grand Haven (PLEASE USE NEW EAST ENTRANCE). Interment will be at Restlawn Memorial Gardens in Holland. Contributions may be made to the Ken Groom ZR5AAD medical donation account or Hospice House of Holland. Share memories with the family at their online guest book at www.vbkfuneralhome.com <http://www.vbkfuneralhome.com/> .

4558. D-STAR Repeaters On-Line at DCC (Digital Communications Conference)

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-09-26 20:21:04 UTC
From: Mark Thompson
Topic: 4558 Message: 4558
Attachments: 2 described; binary payloads are missing from this source WARC

The TAPR D-STAR Repeaters are on-line at the DCC (Digital Communication Conference):

KT7APR A 1292.0 (-20 MHz)

KT7APR B 441.500 (+5 MHz)

KT7APR 1242.0 DD

Several DCC attendees are monitoring the 70cm repeater. Give us a call today, Friday or tomorrow, Saturday.

If you're at the DCC or in the Chicago area stop by the DCC demonstration room & take a look at the repeaters and the Icom equipment display.

Tonight, Friday at 7 pm is the D-STAR Friday Night Forum. Some of the leading innovators in the D-STAR community will be presenting.

More information about the DCC is available at: http://www.tapr.org/dcc

Thanks to Icom for donating the 23cm D-STAR repeaters & controller and thanks to TX RX for donating the 23cm triplexer to TAPR.

Topic: 4563 Message: 4563

All:

Coming in November are two interesting contests you can learn and enjoy with your participation. Sweeps. That's short for the ARRL November Sweepstakes. There is a CW version on the first weekend, November 1 - 3. The phone version is a couple of weekends later on November 15 - 17.

These are domestic contests where we chase QSOs with the States and Provinces of the US and Canada. They're called Sections in this 'test.

You are invited to find a contesting operation to support. At the Muskegon Area Amateur Radio Council we will activate our club radio shack W8ZHO for each contest.

You say, "I don't know enough about code." It is amazing. You don't have to know code. We will need folks to log, cheer, learn the code, learn how to contest, and help find that elusive last section. Each weekend, too. Contests are interesting ways to play on the radio. And they offer great learning opportunities. You do have to be willing to develop a new radio skill.

Of course, it helps if you have contested before. We can use your help as well. We will be running a Multi-Single, which is shorthand for Multiple operator Single transmitter. A "Clean Sweep" gets you a special mug and bragging rights for a year. We're hoping for the mug. We'll settle for the fun and friendship.

Stop in and get a load of the action. Check the web for the rules. There are also tons of sites offering useful tips. Bring your ideas to the contest station near you and lend a hand.

You can earn your WAS wallpaper in a weekend? Yep.

We hope to see you. And, especially, to work you.

73

hello all this friday Oct 3 2008 is the Spring Lake Homecoming parade the parade starts at 6:00pm We till be meeting at 5:00 pm at the Spring Lake Village Hall EOC We will be blocking streets for the kids and the Homecoming court to pass the whole event takes aprox 30 to 40 mins If you can help contact kc8uny at kc8uny@... or Don kb8odb at kb8odb@... Thanks 73 de kc8uny

4567. DCC (Digital Communications Conference) A Success & Returning to Chicago Next Year

Yahoo group: WestMichiganHams (2006 — 2008)

ARRL/TAPR Digital Communications Conference: "Pretty Interesting!"

The main presentation room at the 2008 ARRL/TAPR DCC provided ample seating and tables, as well as power supplies, for laptops. [Larry Wolfgang, WR1B, Photo]

Kermit Carlson, W9XA (left), and Rick Muething, KN6KB, go over the final arrangements just before Muething's presentation on audio/visual equipment. Carlson coordinated the a/v for the DCC. [Larry Wolfgang, WR1B, Photo]

Almost 150 aficionados of digital communications came to Chicago for the 27th annual ARRL/TAPR Digital Communications Conference (DCC) the weekend of September 26-28. This conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees had the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. Not only was the conference technically stimulating, it was a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications; introductory sessions were scheduled throughout the conference to introduce new technical topics for both beginners and experts.

One of the attendees was QEX Editor Larry Wolfgang, WR1B, representing the ARRL. He gave a talk "Writing for Publication - It's Not Rocket Science (Even if You Are Writing About Rocket Science!)." Retired ARRL Chief Technology Officer Paul Rinaldo, W4RI, also represented the League, speaking on "SDR Outlook." Central Division Vice Director Howard Huntington, K9KM was present, as was ARRL Contributing Editor H. Ward Silver, N0AX.

Wolfgang gave his presentation on Friday morning and said he talked with many participants throughout the conference who told him that he had them enthused about writing something for QEX. "It also seemed like almost everyone there was making a point to stop me in the hallways or at mealtimes to tell me how much they are enjoying QEX, and to thank me for the effort I putting into the magazine," he said.

Friday was a full day of technical presentations, including "A Protocol for Multicast Weather Data Distribution over AX25," by Nick Luther, K9NL; "SuitSat-2 Update," by Steve Bible, N7HPR; "EcomScs and GateWayScs AX25 Packet Radio E-Mail," by John Blowsky, KB2SCS, and "Frequency and Other New Initiatives in APRS," by Bob Bruninga, WB4APR. The last presentation of the afternoon was "D-STAR Uncovered," by Peter Loveall, AE5PL.

The DCC provided a separate demonstration room for participants to bring and show off their latest projects. Participants were encouraged to bring their own equipment and display for all to see and learn. Wolfgang said he had some "play time" in this room after all the presentations on Friday. After dinner that evening, he said there was "a string of D-STAR presentations starting at 7 PM and lasting until after 10 PM. These were all very interesting presentations, including the D-RATS messaging software by Dan Smith, KK7DS.

Peter Loveall, AE5PL, presented "D-PRS Update" about ways the D-STAR data links can be used to send and plot APRS position maps or interface to the APRS system. Robin Cutshaw, AA4RC, gave a presentation about DV-Dongle, a PC add-on that allows connection to D-STAR repeaters around the world through your PC and an Internet connection. Pretty interesting!"

In addition to the main technical presentations on Saturday, there was also a full day of introductory sessions, mostly about digital voice and D-STAR.

Also on Saturday, Matt Etttus, N2MJI, gave a report on the Ettus Research USRP2. Tom Clark, K3IO, gave an "AMSAT Update." Paul Wiedemeier, KE5LKY, presented his paper on "Using UDPcast to IP Multicast Data over Packet Radio." Paul Rinaldo, W4RI, gave his "SDR Outlook" that covered the international regulatory front and presented some of the concerns that some world governments have with regard to the flexibility of SDR. Scott Cowling, WA2DFI, gave an "HPSDR (High Performance Software Defined Radio) Update" during which he described the various circuit boards that make up the HPSDR project. He also demonstrated a complete working radio in the demo room. Jerry Shirar, N9XR, presented a paper called "Clocking the Data," concerning the use of an inverter and a crystal to form a Colpitts oscillator.

Victor Poor, W5SMM, gave an update on Winlink 2000. "He reported that there is one Web site, five Common Message Server sites around the world, 150 Radio Message Service Pactor Gateway sites, 800 RMS Packet Gateway sites and over 13,000 registered users," Wolfgang said. "He also mentioned that inactive users are purged from the system from time to time." Rick Muething, KN6KB, described his "WINMOR Soundcard ARQ Mode for Winlink HF Digital Messaging." Wolfgang said that this was a much anticipated presentation: "Rick reported that WINMOR is 3 to 4 months from beta testing. His preliminary comparisons to Pactor 1, 2 and 3 use a simulator. He indicates that WINMOR will have better throughput than Pactor 1 and comparable to, or perhaps a bit better than Pactor 2, but not quite as good as Pactor 3. He indicated that the efficiency is within about 70 percent of Pactor ARQ."

The TAPR Annual Meeting was held after all the presentations on Saturday where the Board of Directors discussed the idea of coming back to the same hotel for next year's DCC. "The local group that supported DCC this year, including Mark Thompson, WB9QZB, and Kermit Carlson, W9XA, did a great job of providing AV support," Wolfgang said. "Ron Steinberg, K9IKZ, who owns a local audio/visual company, provided two large projection screens and projectors, so every presentation was shown on both sides of the room, as well as on a widescreen TV outside the room. The audio was very easy to hear, even if you were in the hall outside the room or in the demonstration room; the set-up was left there from the W9DXCC Convention the previous weekend. They offered to provide the same support for next year, if the DCC returned. So, the decision was made to break with tradition, and return to Chicago next year, September 25-27."

Phil Harman, VK6APH, presented the Sunday morning seminar, "Software Defined Radio Through the Looking Glass." Wolfgang said he found Harman's presentation to be understandable "at my level of knowledge, and he gave a lot of good insight into many of the design decisions that went into the High Performance Software Defined Radio Project. I found his descriptions of how the hardware and software work to be very interesting. The four hours went by quickly."

For more information on the 2008 Digital Communications Conference, please visit TAPR's DCC Web page.

Hello, we're looking for someone who has a vehicle that is big enough to haul the new O.C.E.C. trailer during emergencies. The ball is 2 5/16", the wiring harness is a round 7-prong, and the size of pickup truck needed would be a ½ ton or bigger.

If interested, please let me know, we can get keys made for you for the ball lock and get you approved to haul the trailer, etc.

4574. Lakeshore Super Swap - October 18, 2008

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-10-07 12:57:08 UTC
From: Steve Vander Hill
Topic: 4574 Message: 4574

Announcement

On October 18, 2008, hundreds of amateur radio operators will come to Holland to attend the sixth annual "Lakeshore Super Swap" meet, hosted by the Holland Amateur Radio Club.

Numerous vendors will be present to sell both new and used communications equipment of all types ranging from the latest manufactured equipment to the parts, tools, and materials used by radio experimenters to build and repair their own equipment.

The event is open to anyone interested in electronics, computers or radio communications, and will likely attract people from throughout the Great Lakes Region.

The Super Swap will take place on October 18, 2008 from 8:00 AM to about noon, at the West Ottawa High School, South Campus, located at 152nd Avenue and Riley Street.

For More Information: See the website at: www.hollandarc.org

4575. American Red Cross - DSHR and HAMS

Hello, reference below, please advise me via return email if you would be interested in becoming a part of the American Red Cross Disaster Services Human Resources system. This system is utilized to call out trained volunteers in specific areas for national disasters normally for a three week time frame.

If there are enough interested, we can hold a special training session to get through the required basis American Red Cross training.

Let me know if your interested, thanks!

Subject: DSHR and HAMS

Steve

Sindee forwarded your e-mail regarding HAMS and the DSHR. I would love to add anyone who is interested to the DSHR. They would have to go through the normal procedures of completing the volunteer application for the chapter, background check, and training. The training would be pretty basic, just Intro to Disaster, available on line, and Fulfilling Our Mission. We could set up a special class for the Fulfilling Our Mission course just for your group if there are more than 6 participants.

If anyone is interested please have them contact Bob Brooks, volunteer coordinator, to begin the process.

Gerry Dawson

Hi Steve
If the HAMS are going to go out and do amateur radio I would also recommend that they take DST 101 Intro/Overview and DST 101 RCM. DST 101 Intro/Overview is the Disaster Services Technology overview course that tells about what DST is and it's various activities. The DST 101 RCM is the Disaster Services Technology Response Communications overview course. See the Red Cross DST Neighborhood for the next online/conference call training opportunities.

The DST courses are also available to ANY Red Cross volunteer.

Best Regards,
Rich "Doc" AC8AL

4578. any Windom experts out there?

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-10-11 03:06:22 UTC
From: T Behler
Topic: 4578 Message: 4578

Hi, all.

This is Tom Behler: KB8TYJ.

As some of you may know, I live in Big Rapids. I also am Mecosta County's EC/RO

Anyway, I have recently put up a traditional Windom antenna for HF, and am not quite getting the results I had hoped.

My Windom is a coax-fed 80-meter
Windom. It is fed by RG8U coax, and has a 4-1 balun at the feed point on my tower. The feedpoint and legs are all about 35 feet off the ground. The short leg is 44 feet long, and the longer leg is 88 feet long. I based these lengths on the following formula:

468 divided by 3.550 Megahertz. I then multiplied 132 feet by .66 for the long end, and .33 for the short end. Due to space limitations, 8 feet of the longer leg is hanging down vertically.

My SWR's on the various HF bands are marginal in many cases. Let me give you some readings to show you what I mean:

I took readings at the low end, the center, and the high end, of the following bands, and came up with the following SWR readings:

80 meters:
2.9 2.1 1.1

40 meters:
3.3 3.1 2.3

20 meters:
3.0 2.4 1.7

15 meters:
3.8 3.9 4.8

10 meters from 28.05 to 28.5(very surprising):
5.1 4.7 3.4

17 meters:
1.7 1.8 2.0

30 meters:
around 8.1 to 1 throughout--basically untunable.

It has been suggested that my problem lies in the fact that i multiplied the 132 foot figure by the wrong factors, when doing my initial calculations.

Perhaps I should have multiplied 132 by .64 and .36. This may mean that my long leg is now roughly 3 feet too long, and my short leg is roughly 3 feet too short.

At this point in my e-mail, I need to add the fact that I am a blind ham, who needs help with antenna projects of this nature. The antenna has been put up and taken down twice already, under rather difficult conditions, and I really am hesitant to have all of that done again by sighted help, unless I'm absolutely sure that any fix will truly correct the problems I am having.

The antenna obviously is usable on most bands, with the auto-tuner in my Kenwood TS480, but I am sure the antenna is not performing optimally.

Can someone tell me if I really need to modify this antenna again to make it work better, and what that modification should be?

Also, is there anything I can do or check from the ground before going to all this trouble?

Thanks for reading this e-mail.

I look forward to any responses someone can provide.

73 from Tom Behler: Kb8TYJ, Big Rapids, MI

4579. Re: [WestMichiganHams] any Windom experts out there?

Yahoo group: WestMichiganHams (2006 — 2008)

From: Jim KC8PCJ
Topic: 4578 Message: 4579

I am running a 133 ft windom. 41' 6" / 96' 6" with a 4-1 balun. 23' down from the balun is a 1-1 choke. Right now I can get the SWR below 2 and on some bands 1 to 1 The only issue I have is that the best tuning is just below the bottom of the bands. This tells me it is a little long. I am using an MFJ 993 tuner which brings the match below 1.3 to 1 on all bands except 160M. The next time I bring it to the ground I am going to shorten each side a little and hope to get it to tune to the center of the band. It seems that there are many different lengths depending on which web site you look at.

For the last few years I have used a 66' version with very good results. I put the 133' version up this summer. It has a little better gain (3-5 s-units) than the 66'. N9AUY Bob and I Have also put both a 66' and 133 " Windom on the LST 393 downtown. And have done the same on the Muskegon County EOC.

Here are a couple of links Hopes this helps

Forgot to say, I am not an expert by any means.
But I love to build my own antennas.

From: T Behler
Topic: 4578 Message: 4581

Jim:

I think I might have met you when I did the presentation on amateur radio for the blind at the MARC monthly meeting about a year ago.

Anyway, what you're telling me here is that all of this is not an exact science, and that it all depends on exactly where you feed the Windom, and what the lenghts of the legs are on either side of the feed point.

I'll keep your e-mail here for future reference.

I guess my main concern is that if I get someone over here to help tweak things, I certainly don't want to make them worse, and want to be sure I make them better with whatever I do.

Do you know of any e-mail users groups devoted to Windoms, or anyone else I might contact for input on this problem?

Thanks very much, and 73 from Tom Behler: KB8TYJ, Big Rapids

Mark:

So, are you saying that the current arrangement I described in my previous e-mail is probably working as well as it will?

Again, mine is 132 feet long--88 on the long end, and 44 on the short end. It is fed with RG8U coax with a 4-1 balun at the feed point.

This is a traditional Windom design that I was given by another fellow ham.

Will give the antenna a work-out today and tomorrow on the Pennsylvania QSO Party contest.

Tom-
I am no expert, first off. I have also built and used a few different wire antennas on HF. I do not think your SWR readings are surpising, nor do I feel they show that your antenna is not working optimally. As to 30M being un-tunable, it is often the "black sheep" when it comes to HF antennas, as it is not harmonically related to the other bands. Again- I am not surprised the SWR on 10Mc is higher than all the others. Why are you figuring it is not working well? Do you have another antenna to compare it to? Just curious. Performance is subjective without a comparison antenna of known performance, or field strength measurements.
Another thing I've found is that MANY (read "most") Baluns you buy are of inferior quality.

Not sure any of this is help, but hopefully is food for thought, any way.

Look forward to hearing you on the air!!

73-
Greg Schippers, KC8HXO

I think your feed point is at the wrong spot. My ARRL Antenna Handbook suggests placing the feed point 14 per cent off center, so that a 130 foot windom, has a feed point 47 feet from one end. Sometimes the feed point is moved slightly to accommodate balanced line feeder, and this design, sometimes called the Carolina Windom, uses a portion of the feeder as a vertical radiator, eliminating the problem with the feed line radiating, as
it is intended to do just that.

Common dimensions for the Carolina Windom are 130 feet ling, with the feed point 50 feet from one end, and 83 feet from the other end.

So... I am thinking that your feed point may be off - AND maybe that your overall length may be less than optimal as well. It may be closer to 30 per cent from one end, rather than 33 or 35 percent...

Just my take. I would reconsider the length and feed line situation.

I think I stated the wrong dimensions on my antenna, the numbers don't add up. Here is another site.

I hope to lower mine tomorrow and tweak it a bit.. I will let you know what lengths I wind up with. My antenna is about 35 feet above the ground and runs NW to SE.

Here are the deminsions and the plan that I used. Depending on how high the antenna is, they use a different balun. further down in the text they say when in doubt use a 4-1 balun.

Gee Jim -- I ran the numbers according to that formula, and
came up with an 80-10 meter OCF "Windom" - which is not
really a windom because I think that a "true' windom is a single
wire, like a random wire, that is off center fed "Marconi style"...
but anyway...

I came up with a total length of 123 feet, with 79 on the long
side and 44 feet on the short side (rounded off to whole
numbers.)

Using the formula for a 160 meter antenna, I came up with
166 feet on the long side, and 166 on the short side, for
a total length of 260 feet, with 166 on the long side, and
94 feet on the short side.

The article pictures one measuring 135 feet in length, and
it is 90 feet on the long side, and 45 feet on the short side.

NONE of these measurements seem to coincide with your
antenna measurements as stated in the first post.

Maybe you need to revisit the formula and double check the
lengths to be sure both sides are correct.

Not sure what happens when the lengths are not determed
according to the formula, but are just in direct proportion to
what the formala would call for... but I doubt it would work as
well as cutting the lengths to what the formula calls for, and
not being just in proper proportion.

Happy trails. Hope this is helpful in some way.

Well I have looked at so many numbers and different plans, now I am getting a little confused. You are right the Original "windom" was a single wire fed aprox 14% off center. The antenna I have built and found plans on the web is many time referred to as a "Carolina Windom". It is off center fed at 33% and uses a 9-1, 6-1, 4-1 balun (depending on what plans you look at) and a portion of the coax is used as a vertical radiator with a choke at 22' down from the balun. Maybe the correct term would be to call it a OFC Multi band dipole. I have found many plans for this antenna and there seems to be many variations. Baluns and lengths also seem to vary.

I guess in the end antennas may be a science but than again when you can find the resonant freq of any object, It could be an antenna. ie the window blind that was in a article in QST.

I am glad to see this discussion. It keeps the brain working. Today I am going to drop my antenna, do a little trimming and see what happens. Hopefully after all this I will have an even better antenna.

Will let you know what happens.

73s Jim

Well I made some changes. Went to 80' on the long side and 45 on the short. 40M got much better 3.9 to 1.5 however 20 went the other way, from 1.6 to 3.6. Tuner still cleans things up. Wish I had many more hours to play but Will give it a try on the air and see what happens.

How about 8 PM on 14.235?

I reset my tuners memory and it does not do as much tuning within each band. So it appears that even though the swr has changed it is flatter across each band.

Tom: Hope some of this information has helped you.
What kind of tuner are you running?

I will do some more SWR reading and record them so you can compare.

Greg:

Sorry for the delay in my response.

Just catching up on e-mail here, since I spent most of the week-end doing the Pennsylvania QSO Party contest.

Actually, you may be right:

I was very surprised as to how well my Windom actually worked during the contest, especially given the absolutely horendous conditions on 40 meters yesterday.

Made 250 contacts, and got all but 4 of the 67 Pennsylvania counties.

Worked 40 and 80 CW and phone.

A real fun contest to be sure, since I grew up in PA and got my first ham license there.

Will continue to work with the antenna, but I was very pleasantly surprised.

Tom-
I am no expert, first off. I have also built and used a few different wire antennas on HF. I do not think your SWR readings are surpising, nor do I feel they show that your antenna is not working optimally. As to 30M being un-tunable, it is often the "black sheep" when it comes to HF antennas, as it is not harmonically related to the other bands. Again- I am not surprised the SWR on 10Mc is higher than all the others. Why are you figuring it is not working well? Do you have another antenna to compare it to? Just curious. Performance is subjective without a comparison antenna of known performance, or field strength measurements.
Another thing I've found is that MANY (read "most") Baluns you buy are of inferior quality.

Not sure any of this is help, but hopefully is food for thought, any way.

Look forward to hearing you on the air!!

I am thinking of re-visiting the length issue for each leg at some point, but it's so hard to get the antenna up and down, given my property situation, that I may have to put that off for a while.

Will keep your thoughts in mind, though, for future reference.

4600. Re: [WestMichiganHams] any Windom experts out there?

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-10-13 01:13:25 UTC
From: T Behler
Topic: 4578 Message: 4600

Mark:

See some of my earlier e-mails for the pleasant surprise I got as I used the antenna for the PA QSO Party this week-end.

I know the antenna isn't quite optimal, but it sure did well, given the conditions that existed, especially yesterday.

I would hate to have you come all the way over here from Muskegon just to do some work with the analyzer, so, unless you find yourself in Big Rapids for some reason, I probably wouldn't worry about it. However, I truly appreciate the offer.

Sure wish they made an antenna analyzer that talked! (HI! HI!)

Thanks, Jim.

Well, I'm using a 4 - 1 balun, so at least that's right! (grin)

Jim:

I'm reading the mail with interest here.

I'm using the auto-tuner in the TS480, although I have an old MFJ 901B versatuner that I can also use with my talking SWR meter if needed.

Will continue to play around as I get time.

How about 8 PM on 14.235?

I reset my tuners memory and it does not do as much tuning within each band. So it appears that even though the swr has changed it is flatter across each band.

Tom: Hope some of this information has helped you.
What kind of tuner are you running?

I will do some more SWR reading and record them so you can compare.

Sent: Tue, 14 Oct 2008 12:47 pm
Subject: Preview the 2008 ARRL On-Line Auction NOW!

PREVIEW WEEK STARTS OCTOBER 16, AT 10AM ET

Just what is preview week? You have an entire week before bidding starts to register to bid, and browse through new equipment, vintage equipment, and products & services. You can also tour our virtual Flea Market category from the comfort of your chair and check out the many bargains.

PLEASE NOTE THAT YOUR PASSWORDS AND USER IDS FOR THE ARRL WEB-SITE ARE NOT TRANSFERABLE TO THE ARRL ON-LINE AUCTION WEBSITE. YOU WILL NEED TO REGISTER HERE IN ORDER TO BID: www.arrl.org/auction

---

The 2008 ARRL On-Line Auction
will open for bidding on October 23rdat 10AM ET.

Bidders will be treated to over 160 items to browse through and bid on, including a vast array of QST Product Review items, new and pre-owned equipment and other goods and services.

Proceeds from our yearly On-Line Auction benefit ARRL education programs including activities to license new hams, strengthen Amateur Radio's emergency service training, offer continuing technical and operating education, as well as creating instructional materials.

This event would not be possible without the generosity of our donors. Our sincere thanks to all who donated items for this year's auction and a special mention to the two organizations below who have chosen the highest level of participation as 2008 ARRL On-Line Auction Golden Gavel Sponsors.

Golden Gavel Sponsor - Icom America, Inc. donates the IC-7000

The ICOM IC-7000 represents the next generation in all-mode HF/VHF/UHF mobile transceivers. DSP at the IF level is the cornerstone of this impressive new multi-bander. In fact, the 7000 employs two DSP chips to work its magic. Imagine having 41 bandwidths available - standard! You can even select sharp or soft filter shape. And variable twin PBT allows you to either narrow the IF passband, or shift the entire passband to eliminate QRM. All the controls are intuitive to use.

Eight of the most-used radio functions are controlled by dedicated function keys grouped around the display for easy visibility. One quick touch turns the function on and off. A longer touch activates adjustment of the function's setting. An internal memory keyer provides four memories for station information or contest exchanges. The keyer also

performs automatic repeat, automatic contest serial numbers and cut-numbers. The Digital Voice Recorder (DVR) function has a front panel REC control that allows you to record incoming signals for up to 25 minutes.

Other features include: a detachable control head (requires optional separation cable), 503 memories, S/PWR/SWR meter, RIT, Preamp, RTTY Demodulator, Attenuator, adjustable SSB bandwidth, NTSC video output, DTMF memory, VOX, full break-in and adjustable CW pitch.

The IC-7000 comes with the HM-151 backlit remote mic, spare fuses, key plug and DC power cable.

Please click the ICOM® link HERE for more information.

Golden Gavel Sponsor - R4 Systems, Inc. donates the PROTEUS DESIGN SUITE from Labcenter

Proteus PCB design combines the ISIS schematic capture and ARES PCB layout programs to provide a powerful, integrated and easy to use suite of tools for professional printed circuit board design.

All Proteus PCB design products include an integrated shape based autorouter and a basic SPICE simulation capability as standard. More advanced routing modes are included in Proteus PCB Design20Level 2. The Advanced Simulation Feature (ASF) option is also included in this package.

The following are some of the Proteus highlights:
* Full feature ISIS schematic capture with support for hierarchical design, bus pins, configurable bill of materials.
* Netlist based ARES PCB layout with support of up to 16 copper layers, 10nm resolution, any angle component placement, full electrical and physical design rule.
* Basic Simulation.
* Unlimited Shape-based Power Planes.
* Global Shape Based Autorouting.
* Command Driven Interactive Autorouting.
* 3D Board Visualization.
* Gerber standard output files.
* ODB++ Manufacturing Output.
* Gate-Swap Optimizer.
* Board Auto-placement.
This Proteus package gives the electronics designer all the tools necessary for Concept to PCB layout in a easy to use package.It includes Schematic capture, Advanced Simulation, PCB Layout, Shape-Based Autorouting for the most demanding of boards. Proteus is the CAD package every HAM would like to own. A copy of our Free Demo can be downloaded at our website.=0 D

Please click the R4 link HERE for more information.

We would also like to extend our sincere thanks to all of our ARRL Business Partners, listed below, for making donations to the 2008 ARRL On-Line Auction. Please visit their links to view the great assortment of products they offer.

Weare pleased to report that we have also received a large number of donations from members, staff and others and we’re still receiving donations every day. Starting bids for our auction items range from $5.00 to $9,500. No matter what your price range, there’s something for everyone.
& nbsp;
So please join the fun on October 23. To ensure that you have adequate time to register, browse and bid, the auction site will be opened for previewand registration beginning October 16, 2008 at 10 AM ET at:
www.arrl.org/auction

Until that time, we will continue to work on the site, adding auction items every day.If you have any questions, please don’t hesitate to contact....

From: Tom VanderMel KB8VEE
Topic: 4607 Message: 4607

>- Balloting in progress for Vice Director
> - QST Cover Plaque winner from Ohio
> - Red Cross is demanding Intellectual Property agreements
> - A brief poll regarding Red Cross
> - GLD member in October QST
> - This weekend is JOTA
> - Pennsylvania is 29th state to pass antenna support bill
> - Humanitarian Award nominations invited
> - First call for SW Ohio Digital Symposium
> - Online Call Sign history database
> - Tentative schedule
>
> +++ Balloting in progress for Vice Director +++
>
> Voting for Vice Director for the Great Lakes Division is in progress.
> Most Division members appear to have received their ballots; however,
> some may still be waiting for the US Postal Service to deliver theirs.
> Remember, the ballots were mailed by Bulk Mail. Times required for
> delivery of it are erratic.
>
> If you do not receive a ballot by October 31, I encourage you to
> telephone Dave Sumner at 1-860-594-0303 or e-mail him at k1zz@...
> to request a replacement ballot be sent to you by First Class mail.
> Ballots must be received by noon on November 21.
>
> Please review the candidates' backgrounds and vote. Be certain to
> place your ballot inside the "ballot" envelope and seal this in turn in
> the mailing envelope provided with your ballot. Ballots are to be
> mailed to the League's accounting firm, not to Headquarters.
>
> What is the duty of the Vice Director? Article 5 of the ARRL governing
> documents specifies that the Vice Director has the power of
> "succession" (to become Director) in the event the Director becomes
> unable to serve. Otherwise, the Vice Director assists the Director (of
> the President) as requested and agreed.
>
> +++ QST Cover Plaque winner from Ohio +++
>
> Great Lakes Division amateur Jim Weit, KI8BV of Sandusky, OH has been
> named winner of the Cover Plaque Award for September QST. His winning
> article was titled "An All Band HF Dipole Antenna."
>
> Sincere congratulations to Jim for his fine article and the award. QST
> Cover Plaque Awards consist of a plaque of the front plate of the issue
> in which the winning article appeared. Winners are determined by vote

> of the membership.
>
> +++ Red Cross is demanding Intellectual Property agreements +++
>
> Red Cross appears to be expanding its legal agreement demands. This
> time, a few chapters in Ohio are demanding radio amateur volunteers to
> sign away their rights to intellectual property developed while a Red
> Cross volunteer. The local chapters say this is another requirement of
> American Red Cross at the national level.
>
> Signing away ones intellectual rights -- rights to inventions or
> written "product" any of us develop -- is a potentially serious action.
> Many of us sign intellectual property agreements with employers. They
> pay us and deserve to receive the rewards of inventions we develop at
> work and in some instances when we are not at work. But signing away
> our ownership rights for innovations we develop just because we operate
> a radio to help our community in an emergency? This seems to be going
> just a bit overboard.
>
> If you are asked to sign an intellectual rights agreement, I encourage
> you to evaluate the agreement thoroughly before you sign it. Having it
> reviewed by an attorney either on your personal behalf or the behalf of
> your ARES unit or club would be a good idea. Depending on the wording
> of the agreement the agreement just might require you to surrender the
> rights to a "better mousetrap" over to Red Cross if you happen to
> develop one.
>
> ARRL does not recommend you refuse to sign an intellectual property
> agreement with the RC. What we suggest is that you review carefully a
> request by anyone to sign your rights over to them. Personally, I
> would graciously decline to sign any of my rights away if doing this is
> not in my families' or my own best interest.
>

> The Background:
>
> It has been about a year since the American Red Cross allowed the
> Memorandum of Understanding (MOU) between ARRL and itself to expire
> without making any effort to renew it. Soon after the Red Cross
> allowed the MOU to expire, RC began to require its volunteers to sign
> an agreement to allow it to perform full background checks on them. As
> the background check is described on Mybackgroundcheck.com, it would
> include manner of living, credit and criminal checks.
>
> Investigators could visit your employer, co-workers, friends and
> neighbors to ask probing questions about you if you agree to the manner
> of living check. Authorizing a credit check give full right to digging
> out any information concerning your financial history.
>

> Puzzling to me is that RC insists background checking be done by a
> private corporation rather than by a law enforcement agency that has
> limitations placed on it by law. RC initially stated it would have
> only criminal background checks done; however, they still demanded
> volunteers sign an agreement that authorized them to do all forms of
> background checking.
>
> Today's Situation:
>
> The situation has changed relatively little in the past year. Even
> though American RC stated it would remove demands that ham volunteers
> automatically agree to credit and manner of living checks, legal review
> of the modified agreement fails to show a meaningful difference from
> the initial demand. After months of attempting to work with RC, we
> still seem to be essentially where we started.
>
> Just one thing has changed. ARRL, through our EmComm officer, and RC
> are engaged in preliminary discussions toward developing a new
> Statement of Understanding (SOU) between the two organizations.
> Traditionally, these statements obligate ARRL and ARES to be available
> to support Red Cross. Any benefit to Amateur Radio would be derived
> from supporting Red Cross.
>
> The Question:
>
> At its July meeting, the ARRL Board of Directors expressed its firm
> position that we will not agree to a new Statement of Understanding
> before RC actually removes its demands for credit checking and manner
> of living checking from background checking agreements. Soon after the
> Board took this position, President Joel Harrison, W5ZN gave a similar
> assurance to all ARRL members in an item that was posted on the ARRL
> web site.
>
> I want to learn what you think about this issue.
>

> ARRL and RC? Should the Board hold to its initial position and not
> approve a new SOU -- not sign a mutual agreement of cooperation with RC
> -- until RC has dropped demands for credit and manner of living
> background? Or, should we sign a new SOU regardless even if the RC
> still demands that hams agree to having credit and manner of living
> checking done? Incidentally, there is no question of the legitimacy of
> RC requiring criminal background checks. We'd prefer these by done
> through police agencies rather than private industry, though.
>
> How to Participate in the Poll:
>
> To participate in the poll, go to the Great Lakes Division web site at
> http://greatlakes.arrl.org. Click on Surveys/Feedback and answer the
> question posted there. If you would like to add comments to your

> answer, go to the Feedback area and type in your thoughts.
>
> The poll will be open for 10 days after this issue of Weaver's Words is
> distributed. Please let me know your opinion.
>
> +++ GLD member in October QST +++
>
> Tom Shaver, KC8NJK was pictured receiving the Lansing, MI, Hometown
> Hero Award on behalf of the Ingham (MI) County ARPSC. Tom Is ECC of
> Ingham County, MI. The award was given in appreciation of ARPSC's work
> following a series of tornadoes and torrential rains in the area.
>
> +++ This weekend is JOTA +++
>
> This weekend is JOTA -- Jamboree on the Air -- for Scouts. This year,
> JOTA celebrates its 51st anniversary. The on-air jamboree follows a 48
> hour schedule beginning 0000 local time on Saturday, October 18,
> continuing through 2400 local time on Sunday, October 19. Nearly
> 500,000 Scouts worldwide are expected to operate on SSB, CW and digital
> -- particularly, PSK-31 -- this year.
>
> Full information on JOTA 2008 can be found at

>
> +++ Pennsylvania is 29th state to pass antenna support bill +++
>
> On Wednesday, October 8, Pennsylvania Governor Edward G. Rendell (D)
> signed into law a bill that guarantees radio amateurs the right to
> erect antenna support structures. Ohio members are requested to be
> ready to support Ohio House Bill No.563 which will place FCC Rule PRB-1
> into Ohio law. This bill will require all government agencies in the
> state to allow amateurs to erect antenna support structure regardless
> of any current local, township or county ordnances.
>
> What is an antenna support structure? If you haven't guessed, this is a
> "tower" however, do not call them towers to non-hams. Non-amateurs
> automatically think of cell towers when someone refers to a tower.
>
> Ohio hams, please contact Ohio SM Joe Phillips, K8QOE (k8qoe@...)
> to learn how you can support passage of Ohio HB 563. Working together,
> the job can be done. The law is non-partisan, costs nothing and merely
> puts into Ohio statutes the FCC rule that is already accepted as Ohio.
> The difference is that by putting PRB-1 into actual print in Ohio law,
> its existence cannot be "accidentally" overlooked by local officials
> who prefer to ignore it, now
>
> +++ Humanitarian Award nominations invited +++
>
> Nominations are open for the 2008 ARRL International Humanitarian
> Award. The award is conferred upon an amateur or amateurs who

> demonstrate devotion to human welfare, peace and international
> understanding through Amateur Radio. The League established the annual
> prize to recognize Amateur Radio operators who have used ham radio to
> provide extraordinary service to others in times of crisis or disaster.
> The award is described in greater detail at
> http://www.arrl.org/FandES/field/awards/humanitarian.html.
>
> +++ First call for SW Ohio Digital Symposium +++
>
> This is the first call for the 23rd Annual Southwest Ohio Digital &
> Technical Symposium. The symposium will again be held in Thesken Hall
> of the Miami University Middletown Campus, Middletown, OH. The date is
> January 10, 2009.
>
> Papers to be presented at the symposium are solicited. Topics are wide
> ranging, from "how-to" articles concerning digital modes, to
> construction projects for transceivers. A sampling of what was
> presented last year is on the web at http://www.swohdigi.org. Please
> send your ideas and suggestions to K4ZLE, k4zle@...
>
> The SW Ohio Digital & Technical Symposium is the 2nd longest running
> amateur radio technical symposium in the United States. The event is
> free, except for a nominal cost for an optional catered lunch.
>
> +++ Online Call Sign history database +++
>
> The U.S. Amateur Radio Call Sign History Restoration Project is the
> product of Michael Carroll, N4MC of Woodbridge, Virginia. His
> Operation CQ is to encourage development of a true database of the
> history of Amateur Radio call signs. Michael requests your help in
> this project.
>
> Operation CQ is all about assembling information so that any one of us
> could go to it, search on a legitimate call sign and find who held it
> when. Now that FCC is re-issuing call signs after previous holders of
> them have given them up, wouldn't it be interesting to do this? Who
> was the first person to hold WA8COA or K8PGL or whatever, during what
> years and with what license classes? Ideally, wouldn't it be nice to
> find out who used license 2HT way back when?
>
> For Michael's database to be able to do this, a lot of additional
> information -- history -- needs to be entered into his database. This
> is where you come in. Go to the www.vanityhq.com web site to enter
> your call sign history. In addition to entering information for call
> signs and their holders, one can look up call sign history that has
> already been provided. If you have information on friends or relatives
> who are SKs, you can enter this as well.
>
> Check with Michael at n4mc@... if you have any questions or
> comments for him.

>
> Tentative Schedule:

From: John <yp671@...>
To: frrl@yahoogroups.com
Sent: Tuesday, October 14, 2008 5:55:01 PM
Subject: ISS VOICE QSO REMINDER

Richard Garriott is aboard and has already started making random voice QSO's from the ISS. As a reminder do not transmit on the DOWNLINK. It has been reported that many stations are doing this. The DOWNLINK is where you LISTEN ONLY! Transmitting on the downlink does 2 things: 1) QRM's anyone who is listening for their exchange and 2) You can transmit on the downlink until hell freezes over and never get a reply, no one is listening aboard the ISS to the downlink!

Transmit on the UPLINK. The UPLINK is 144.49 FM and the DOWNLINK is 145.80 FM

Most modern radios can be set up for "odd splits"

Those frequencies are at the midpoint of a pass when the ISS is at TCA (Time of Closest Approach). You should correct for doppler shift according to the chart I have uploaded to the files section of the yahoo group in the space folder. Or e-mail me and I'll send it to you.

There are set ups for both rigs that will do 1kHz steps (857D, 2000, 746, etc) and rigs that only do 5kHZ steps (most 2 and dual band mobiles and HT's). You don;t need much of an antenna for the ISS, even the standard rubber duck might work.

The ISS QSL's too so don't forget to claim your card. I'll post that info into the file folder also.

Good Luck, Have Fun and REMEMBER.....LISTEN on the DOWNlink!!

73,

John - AG9D
ARISS OPS

4609. SARAC Hamfest/Swap October 25

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-10-15 22:25:47 UTC
From: Hank Greeb
Topic: 4609 Message: 4609

1500 Hill St, Petoskey, MI Here's one which doesn't show on the ARRL Hamfest calendar.

It's the "Straits Area Amateur Radio Club's" Swap - at the the Petoskey High School Cafeteria, in Petoskey, Michigan, on Saturday, October 25, 2008, from 8 a.m. till noon. No mention of entry fee.

The Petosky High School is at 1500 Hill St, Petoskey, MI, about 180 miles north of Grand Rapids.

Anyone going?

4611. Fw: ARISS SCHEDULE/INFO UPDATE

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-10-17 01:09:33 UTC
From: Mark Thompson
Topic: 4611 Message: 4611

----- Forwarded Message ----
From: John <yp671@...>
Sent: Wednesday, October 15, 2008 9:04:00 PM
Subject: ARISS SCHEDULE/INFO UPDATE

Forwarded from ARISS:

All,

It was quite an exciting day for ARISS yesterday with the Expedition 18 crew docking and the start up of Richard Garriott's ham radio activities. Here are some updates and plans for ARISS during Richard's flight.

Richard, W5KWQ, fired up the radio and started SSTV operations just a couple of hours after docking. Richard planned to support a slide show mode using the SpaceCam software and the SSTV interface box at the beginning of his flight, which is what you saw yesterday. A number of the images were sent down using Martin 1, a higher quality but longer transmit SSTV mode. The Russian team, led by Sergey Samburov, RV3DR, had requested testing several high quality image modes during Richard's flight, so don't be surprised if you see Martin 1 or other high resolution SSTV modes during Richard's flight. We have asked Richard to move to the default Robot 36 mode for the time being and to space out the images once every 3 minutes to reduce the radio transmit duty cycle. Richard confirmed that he will support this. He also has transitioned to the VC-H1 as this will allow Richard to use the computer to support his Earth ops and still support SSTV.

We have had a number of image uploads on the Gallery site by hams all around the world. The ARISS team appreciates your volunteer support through all the SSTV images that have been uploaded. A volunteer ARISS team is working 24/7 during Richard's flight to review these images, to understand how the SSTV operations is progressing, and to include some of these images on the Gallery pages. ALL the images you have uploaded have been archived and are being reviewed. Please continue to upload these images as they help the ARISS team analyze and redirect the SSTV operations. You are welome to upload these through the gallery page:

http://www.amsat.com/ARISS_SSTV/

We also have a blog available that provides the latest ARISS information for this expedition. That blog is located at:

http://www.ariss-sstv.blogspot.com/

You can also reach these sites through the ARISS website:

http:/www.ariss.org

Some other information:

SSTV uplink/downlink: Richard is really not supporting SSTV uplinks during his short duration mission. The downlink is on the normal ARISS VHF downlink, 145.80.

General Voice Contacts: Use the regular general voice frequencies. 145.80 downlink. Uplinks are 144.49 in Region 2 (Americas) and 145.20 for Region 1 (Europe, Africa, Middle East) and Region 3 (Australia, Asia). Richard and Mike Fincke, KE5AIT, have been on the air on voice since shortly after docking yesterday.

Sleep Period Activity: We have asked the crew to turn packet on during sleep periods. Our intent is to keep SSTV active during their work day. The rationale for this is that we are having some issues with the software based (SpaceCam) SSTV system occasionally keeping the radio keyed down after an image transmission. And we have a limited set of Russian batteries available during Richard's flight for the VC-H1.

You are witnessing and are a part of history: Some of you have asked why Richard is using his callsign for some QSOs and SSTV contacts instead of the ISS station callsigns. There is a long and proud history that is attached to the Garriotts. This includes ham radio in space and their personal callsigns. 25 years ago, Richard's father, Owen Garriott, W5LFL, initiated the first ham radio contacts from space on the STS-9 SAREX mission. Richard, W5KWQ, is following in his father's footsteps, using the ARISS ham radio system extensively on his first flight. And Richard's callsign is actually his grandfather's original callsign. So you can see that this mission touches 3 generations of ham radio and 2 generations of ham radio in space!

School Contacts: School contacts from this day forward are tentatively scheduled as follows:

Challenger Learning Center Combined Contact #1, telebridge via W6SRJ; on Thu 2008-10-16 16:39 UTC
Howard B. Owens Science Center's Challenger Center (Lanham, MD) Challenger Learning Center of Columbia (Columbia, SC) Verizon Challenger Learning Center at MOSI (Tampa, FL) Brownsburg Challenger Learning Center (Brownsburg, IN)

Budbrooke Primary School, Warwick, England, direct via GB4OBS Fri 2008-10-17 11:05 UTC

Challenger Learning Center Combined Contact #2, telebridge via W6SRJ; on Fri 2008-10-17 15:30 UTC
Indianapolis Challenger Learning Center (Indianapolis, IN) Challenger Learning Center at Paducah (Paducah, KY) Challenger Learning Center

St. Louis (St. Louis, MO)

Austin Liberal Arts and Sciences Academy, Austin, TX, direct via K5LBJ Sun 2008-10-19 13:14 UTC

Pinehurst School, Ashland, Oregon, telebridge via W6SRJ Mon 2008-10-20 15:13 UTC

National Planetarium, Kuala Lumpur, Malaysia, direct via 9M2RPN Tues 2008-10-21 08:30 UTC

Enjoy the ARISS operations. And my thanks to the international ARISS team for their outstanding volunteer support.

73, Frank Bauer, KA3HDO
AMSAT-NA V.P. for Human Spaceflight Programs
ARISS International Chairman

4612. Monthly Michigan Section News Summary

From: Tom VanderMel KB8VEE
Topic: 37 Message: 4612

> Greetings Michigan Amateurs:
>
> Michigan held its ARRL 2008 State Convention. And it was a successful
> get-together. The combined efforts of the Kalamazoo Amateur Radio Club
> and
> the Southwest Amateur Radio Team hosted the Semi-annual convention. In
> addition to the annual Kalamazoo Hamfest, the convention included several
> forums including Contesting, Getting Started with CW, ARES/RACES and NTS,
> QMN
> and MiTN Nets, Packet Radio, and an ARRL Forum. These were followed by a
> luncheon banquet and an excellent talk by Dan Henderson N1ND from ARRL
> Headquarters. Dan's discussion included a few humorous pokes at ourselves
> while showing a serious need to look at how we prepare for the future of
> our
> amateur radio hobby. The Convention ended with an induction ceremony for
> the
> Royal Order of the Wouff Hong. Our next Michigan Convention will be
> planned
> for 2010. Clubs interested in hosting may contact the Section Manager for
> details.
>
> New Club Officers Elected. The Marinette and Menomineee ARC has elected
> new officers for 2009, they are: Pres K8IR; VP: AA9GZ; Treas: WC9E; Sec:
> KD8ESH; and Quartermaster: KG8CX. The following are the new Blossomland
> ARA
> board members: Pres: N8KBG; 1st VP KD8ZB; 2nd VP KF8Z; 3rd VP: K9RON; Sec:
> KC8TSE; Treas: KB8VIM; Trustee: W8JBA; and PIO: N8MS. Our congratulations
> to
> these new club leaders.
>
> We Michiganders are enjoying the peak of the fall colors right now, but
> it
> is a reminder to catch up on all of the undone outdoor antenna work before
> the really cold weather settles in. How well we all know that those
> antennas
> that went up temporarily in the dead of winter seem to perform the best,
> getting frostbite from hanging on the tower in January is a heavy toll for
> that effort. Perhaps we all should check our antennas out now so we may
> enjoy all the more operating time (as we hope for sunspots to really begin
> to
> stick around for more than two days).
>
> Youth News. Jim KS8O reports that K8DAR, the club station of the
> Menominee

From: Bill
Topic: 4613 Message: 4613

All:

A HUGE thank you to all who helped with the Jamboree On The Air this weekend. We enjoyed good participation from Scouts, their parents, leaders, and hams. It would not have been half the success without your help and support.

Also thanks to the MAARC for providing lunch together with the venue. A big thanks to the Venture Crew who were tremendous assistants.

If you spoke to a kid on the radio this weekend I'm sure you made that kid's day. You sure made my day, too.

Bill, AB8SC

4614. New Ham Orientation Class In Big Rapids; Saturday: November 1--there's still time!

Yahoo group: WestMichiganHams (2006 — 2008)

Hi, all.

Please don't forget to register for the following class if you are interested.

We have extended the registration deadline up till the time of the class, but it'd be helpful to know who is going to attend, so we know how many copies of class materials to prepare.

In addition to the info below, you'll see an attached narrative about the class itself, topics to be covered, etc. .. The narrative was prepared by Don Macconnel (WA4FRJ)--the main organizer of the class.

Thanks, and 73 from Tom Behler: KB8TYJ, Big Rapids

New ham orientation class and potluck Saturday: November 1 at the Big Rapids Department Of Public Safety Building, located at 435 N. Michigan.?-Meet and greet at 8:30 a.m., with class to begin at 9 a.m. Potluck at 3 p.m. at the conclusion of the class. If you?d like to take the class, please RSVP asap to Steve Cowan (KD8DHZ).

e-mail:

kd8dhz@... or

doorman444@...,

Phone: (989) 382-9452.

Hello, reference below, please advise me via return email if you would be interested in becoming a part of the American Red Cross Disaster Services Human Resources system.? This system is utilized to call out trained volunteers in specific areas for national disasters normally for a three week time frame.

?

If there are enough interested, we can hold a special training session to get through the required basis American Red Cross training.

?

Let me know if your interested, thanks!

?

?

Steve

?

Sindee forwarded your e-mail regarding HAMS and the DSHR.? I would love to add anyone who is interested to the DSHR.? They would have to go through the normal procedures of completing the volunteer application for the chapter, background check, and training. The

training would be pretty basic, just Intro to Disaster, available on line, and Fulfilling Our Mission. We could set up a special class for the Fulfilling Our Mission course just for your group if there are more than 6 participants.

?

If anyone is interested please have them contact Bob Brooks, volunteer coordinator, to begin the process.?

?

Daylight-saving time ends

Sunday, Nov. 2, marks the semi-annual clock resetting for daylight-saving time. This time-honored tradition in autumn has the majority of the U.S. "falling back" one hour, excepting folks in Hawaii and some parts of Arizona.

This is also an excellent opportunity to replace smoke detector batteries and check the service life date on your carbon monoxide (CO) detector. Many CO detector manufacturers suggest replacing your detectors every five to seven years, depending on brand.

I saw this program this week on PBS & it's very interesting.

Fractal Antennas - NOVA

NOVA's new episode, Hunting the Hidden Dimension
http://www.pbs.org/wgbh/nova/fractals/

The episode features Nathan Cohen, amateur radio operator and co-founder of Fractal Antenna Systems, Inc.
http://www.fractenna.com/nca_cohen_bio.html

His interview explains how he first used the deisgn for his amateur radio hobby.

BTW, he attended a NSF summer course for high school seniors in physics and astronomy at the University of Iowa in 1970s. Another professional touched by James Van Allen's work!

4622. Hybrid Emergency Communication Course Level 2 (ARECC)

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-10-30 02:22:09 UTC
From: ravennaelectronics
Topic: 4622 Message: 4622

Good day everyone.
Many of you have taken the Level on ARECC course. Very few have taken the Level 2 and even fewer have taken Level 3 and earned their Honor Roll Certificate.

I will put on a ARRL Hybrid EmComm Level 2 course for anyon that is interested and meets the requirements. The requirements are you must passed the Level 1 course. You should also have a valid amateur radio license.

With a "Hybrid" class, you will receive instruction via a combination of on-line and in-person classroom instruction with your Mentor/Instructor. I am the Primary Certified Mentor and I will be getting a couple of other Certified Mentors (CM) to assist. You are enrolled in the ARRL on-line course and will take the final exam on-line. Yes, you still need to do the required Learning Unit activites but the way we do them is differently.

The Hybrid class is conducted using a combination of classroom instruction, online instruction and some field trips. Instruction and instructional student activities will be managed by my cerfitifed mentoring staff (CM). You would be registered in the online course and have access to the online course throughout the instruction period. You take the final assessment online, eliminating the need for exam sessions and related paper-based documentation. If you do not have a computers then you can often obtain Internet access at a local library to take the final exam. You may also be able to find a friend that will allow you to test at their computer

The Hybrid format gives us the instructors the opportunity to introduce information that is relevant to the the West Michigan area. The content of the course fits with the kinds of emergency responses we might be called upon to engage in our local community. You will learn and see who are your served agencies, how we fit in, how we train together and improve relations. The purpose of the instruction is to assure that you comprehend the lesson material which has been to provide a common foundation of knowledge for effective participation in an emergency response. The objective is for you to gain practical knowledge as well as hands-on experience, essential□and crucial□to being prepared for local activation.

Cost: ARRL Member $45. Non-Members: $75

I would run this course beginning this winter, most likely January, and run for 8 weeks, one night a week for three hours that night.

Some nights the course will be run on the radio and not at the training facility. The facility is to be determined once I know the class size.

Please respond here or to my email address if you are interested. My email is ac8al at arrl.net

Best Regards,
Rich "Doc" Strait, AC8AL

VHF/UHF Digital Voice Forum at Ft. Wayne Hamfest, Saturday, November 15th @ Noon in the White Room

The forum will feature a Digital Voice Overview AND a D-STAR discussion.

You can see a preview of the VHF/UHF Digital Voice Video Overview at:
http://www.arvideonews.com/dv/index.html

D-STAR digital voice & data repeaters are already operating in Indianapolis so this will be a great opportunity to learn more about digital voice & D-STAR technology.

Look foward to seeing you at the meeting.

73, Mark, WB9QZB

P.S. - Please forward this announcement to other club newsletters & lists.

Is anyone playing this year?

Are there plans to set up something at the Grand Rapids NWS Office?

I have brought this to the attention of the new WCM over there, and Tom Vandermel.

If anything gets worked out, please let us know, and I'll try to get a group to come down from Mecosta County.

Howdy Joe!
I did do a Level 1 here in Muskegon and only 5 students registered.
I will be happy to do another one for Kent County. I know Jeff is
also a CM/CI/CE so we have the minimum requirement for Field
Examiners. The traditional classroom class takes longer and has a
bit more paperwork and preparation and I have no problems with
that.

Talk it over with the powers to be there and let me know.
Email to my ac8al or docstrait email address.

http://www.arrl.org/news/stories/2008/10/29/10415/?nc=1

New ARRL Satellite Book Available

The ARRL Satellite Handbook. Click here http://www.arrl.org/news/files/sathb.pdf to peruse the Table of Contents and a portion of the first chapter.

The ARRL Satellite Handbook by QST Editor Steve Ford, WB8IMY, brings the thrill of satellite communications within your reach. Filled with understandable descriptions and illustrations, this book includes all the tools you need to participate in this exciting field.

This very readable guide was designed to give a broad introduction to the subject of satellite communications, while providing the practical fundamentals you need to explore, track and operate ham radio satellites on your own. Since the pioneering days of satellite communications, ham radio operators have been along for the ride -- building, launching, and operating satellites. You can experience this technology firsthand using today's fleet of Earth-orbiting ham radio satellites.

With chapters authored by satellite expert Martin Davidoff, PhD, K2UBC, this book is sure to be a hit with both new and experienced satellite enthusiasts. Be sure to get your copy of The ARRL Satellite Handbook today!

http://www.arrl.org/news/stories/2008/10/30/10417/?nc=1

SKYWARN Recognition Day Set for December 6

This map shows the NWS offices that are participating in the 2008 SKYWARN Recognition Day.

Each participating NWS office will send out their own QSL card. This card is from the 2007 SKYWARN Recognition Day in Wichita, Kansas.

The 10th Annual SKYWARN Recognition Day (SRD) Special Event will take place Saturday, December 6, 2008. SRD is co-sponsored by the ARRL and the National Weather Service (NWS) as a way to recognize the commitment made by Amateur Radio operators in helping to keep their communities safe. According to SRD Coordinator David Floyd, N5DBZ, Amateur Radio operators can visit their local participating NWS
office http://www.crh.noaa.gov/hamradio/participating_offices.php, working as a team to contact other hams across the world throughout the 24 hour event.

The idea for the first SRD took shape in the summer of 1999. Meteorologist-in-Charge of the Goodland, Kansas NWS office Scott Mentzer, N0QE, tried to find a way to recognize the valuable contributions storm spotters make to the National Weather Service. "Since many of those storm spotters were also hams," Floyd said, "it seemed like a natural fit for the recognition to be centered on Amateur Radio."

With the approval of NWS headquarters and a commitment to participate from many local NWS offices across the country, the first National Weather Service Special Event took place on November 27, 1999. "At the end of the event, an amazing 15,888 QSOs were logged, with contacts made to all 50 states and 63 countries," Floyd recounted. "The Des Moines forecast office took the honor of making the most contacts of any office that first year with 761 QSOs, and went on to lead the pack until 2003 by logging between 1300-1500 contacts each year!"

Floyd said that feedback from that first event was "overwhelmingly positive" from both the NWS staff and the local ham clubs: "Suddenly there was incentive for more NWS staffers to either obtain a license or upgrade so that more people could work ham radio during severe events. In addition, many club members had never visited an NWS office before. When they came for the special event, they learned the value of their reports and how they were used in conjunction with existing technology."

And so began an annual tradition. The following year, 85 of the 122 NWS offices -- almost 70 percent -- participated in the event, making nearly 24,000 QSOs. "Perhaps the most unusual contact occurred in 2000 was with an airliner 39,000 feet above Utah," Floyd said. "The pilot ended the QSO with a request for a 'spot weather forecast' for his arrival at Salt Lake City airport."

In 2001, the name of the event was changed to SKYWARN Recognition Day, a name Floyd said better relayed what the day was all about: "Each year since the inception of SRD, the number of NWS offices and local ham clubs participating has increased, until now more than

100 offices sign up each year to take part. The most contacts made during any SRD occurred in 2006 when -- thanks to the staff and local hams in the Grand Junction, Colorado area -- 1640 QSOs were logged!"

Station call signs have also changed over the years. Floyd said that some NWS offices and clubs apply for a special event call sign, "such as W3B in Brownsville or N0Y in Aberdeen, South Dakota. Other call signs hint at office location, including WX9GRB in Green Bay and WX4NHC at the National Hurricane Center. Still others represent more of the big picture, as in KC0SKY in Pleasant Hill, Missouri."

Floyd said that as SKYWARN Recognition Day has grown throughout the years, he has seen a greater use of digital communications in addition to CW, RTTY and packet radio: "Each year, more and more contacts are being made using EchoLink, Winlink and the use of e-mail reflectors."
2008 SKYWARN Recognition Day will be held on December 6 from 0000 UTC-2400 UTC. Last year, contacts were made in all 50 states and 40 countries during the 24 hour event. If you haven't joined in the fun, make 2008 your year to do so!

Mark and all:

I have been corresponding with Tom Vandermel, and the new Chief Warning Co-ordination Meteorologist at the Grand Rapids NWS office, and the latest is that Mike Gage has been asked to see if he can set something up, since they have been the key organizers of it before.

So, let's stand by for more details in the weeks ahead.

Or people could use common sense and if they had an email that only pertains to one person, send it directly to that person. But then again, most of us are ARRL Members.

From: Ross
Topic: 4645 Message: 4645

My son sent me a link he saw on Craigslist for a free tower in Manistee for anyone who wants to remove it. The poster is thinking it is 50 ft. There is a picture on the listing of the tower.

Here is the link: http://nmi.craigslist.org/zip/907393971.html

From: Hank Greeb
Topic: 4646 Message: 4646

Kinda hard to think that a radio in a pawn shop in Texas would be from Western Michigan, but, this occupies very low bandwidth.

Anyone missing a Yaesu FT-817 S/N 0N150301?

Hg

Hi Everyone,

One of my Officers found a radio in a pawn shop, the pawner has some suspicious pawns and he is not a licensed radio operator. The radio is a Yaesu FT-817 QRP Transceiver, the serial is 0N150301. All the 0s in the serial are numbers not o as in ocean. Could you ask them to see if one of these radios was stolen during October? We are trying to check with Yaesu to see if they can locate whom they sold the radio to.

Please contact me off line if this might be yours....
Thanks Julie

4647. [GRARA] ARRL Sweepstakes this is Whiskey Eight Delta Charlie calling....

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-11-11 20:31:26 UTC
From: Hank Greeb
Topic: 4647 Message: 4647

*
Hey guys, you don't want to miss Saturday Night!*

It's the ARRL Phone Sweepstakes from W8DC, the GRARA Club station at the Red Cross, 1050 Fuller Ave NE, Grand Rapids, MI 49503. (1/2 Block South of Leonard on Fuller NE).

All hams in the area are cordially invited, members or not. We will gather about 5 p.m. Saturday, and "operate until we drop" - probably around midnight. If you plan to arrive much after 5 p.m., we'll be monitoring the W8DC repeater 147.26+, 94.8 PL. We hope to figure out the "after hours" direct telephone number, and if so, we'll post it at the door of the building.

The club officers call this 'training', _ we call this 'a whole lot of fun!"_

An Extra Class operator will be on duty at all times, so Technicians can get lots of HF practice in the Extra Class bands. Sorry, no code Saturday night, just ole fashioned phone operation and lot's of it. Can anyone match Nate's aggressive techniques from the Michigan QSO Party? Come and see...

We will also be testing-out the two new tri-bander antennas.

See the new web site, http://www.w8dc.org for more information and the sign-up sheet

Sorry for the short notice. We just got the request today.

We are looking for help for the Hoffmaster Trail Run this Saturday Nov. 15, 2008. This will take place at Hoffmaster State Park on Pontaluna Rd. After what happen last year REMEBER TO EITHER HAVE A STATE PARK STICKER ON YOUR VEHICLE OR BUY A PERMIT AT THE PERMIT BOOTH. We will be talking to the Park Ranger tomorrow to see if we can work something out so we won't have to get a permit, but be prepared to pay if they don't agree.

Contact either:
Frank Towsley WA7VLH @ towsley711@... phone 231-722-8264 or,
or myself 231-670-1284 or at email below.

Thanks in advance.

Sorry.

The Race starts at 10am and we will be done by Noon. We will meet at 9am at the big parking lot which is down the first road to the right after you pass the permit/pay hut.

Subject: Victims needed for tonight

Attention all CERT!!!! Due to a group canceling at the last minute we are in desperate need of victims for tonight's final exercise!!!! Please consider helping out with this event. It is important that the current class get a good experience in the final exercise with realistic victims. The class is being held at the fire department training center 1101 Monroe. Victims should be there by 6:45pm. Thank You again for your help at the last minute.

ANTHRAX SCARE AT MICHIGAN

Michigan football practice was delayed nearly two hours late this morning after a player reported finding an unknown white powdery substance on the practice field. Head coach Rich Rodriguez immediately suspended practice while police and federal agents were called to investigate. After a complete analysis, FBI forensic experts determined that the white substance, unknown to the players, was the goal line. Practice was resumed this afternoon after special agents decided the team was unlikely to encounter the substance again.

Hey Denny for those that may not have a park sticker, can ride with those that do. Maybe meet at the NSFD on pontaluna and ride from there. I will not know if I can participate until tomorrow. If I do I have a park sticker and can take 3 with me. To if we can use the county MCV we could also meet and ride in it. Just a couple of ideas.

VHF/UHF Digital Voice Forum at Ft. Wayne Hamfest, Saturday, November 15th @ Noon in the White Room

The forum will feature a Digital Voice Overview Video and a discussion of D-STAR afterward.

You can see a preview of the VHF/UHF Digital Voice Video Overview at:
http://www.arvideonews.com/dv/index.html

D-STAR digital voice & data repeaters are already operating in Indianapolis & Lafayette so this will be a great opportunity to learn more about digital voice & D-STAR technology.

Look foward to seeing you at the forum

73, Mark, WB9QZB

P.S. - If you can't make the forum you can learn more about all the digital voice & data modes by joining the Digital Ham Group at:
 http://groups.yahoo.com/group/illinoisdigitalham/
The group had over 3,000 members world-wide and is the only digital group with dozens of Files & Links covering All the Digtal Voice & Data modes.

Update - the direct line to the radio room is 616-456-8088. If you come down to the Red Cross Building, and find that the door is locked (as it probably will be after the 5 p.m. start of the contest), please dial that number and we'll let you in.

The more the merrier! This is a fun session, with some "training" as a bonus!

Remember, W8DC, the GRARA Club station is at the Red Cross, 1050 Fuller Ave NE, Grand Rapids, MI 49503. (1/2 Block South of Leonard on Fuller NE).

An Extra Class operator will be on duty at all times, so Technicians can get lots of HF practice in the Extra Class bands. Sorry, no code Saturday night, just ole fashioned phone operation and lot's of it.

4664. ARRL to Offer Self-Study Course on Digital Technology for Emergency Communications

ARRL to Offer Self-Study Course on Digital Technology for Emergency Communications

A sample of what The ARRL Digital Technology for Emergency Communication Course offers.

With digital technology becoming an integral part of Amateur Radio, hams interested in Emergency Communications now have a new tool to help them take advantage of emerging modes such as Packet Radio APRS, Winlink 2000, IRLP, EchoLink and WIRES-II, D-STAR, APCO25, HF sound card modes and Automatic Link Establishment (ALE). The ARRL Digital Technology for Emergency Communications Course http://www.arrl.org/catalog/?item=1247 will introduce hams to all of the ways Amateur Radio operators are using digital technology as a valuable emergency communications tool.
Written by ARRL Publications Manager and QST Editor Steve Ford, WB8IMY, this self-study CD-ROM will answer such questions as:

* Can you transfer supply lists or personnel assignments between emergency operations sites?

* Can you get critical e-mails to the Internet if a connection goes down?

* Can you relay digital images of damage at specific locations?

* Can you track the locations of emergency personnel and display them on computer maps?

* …and more!

Illustrations, screenshots, Internet links and audio files are used to demonstrate transmission modes and equipment configurations. Bite-sized learning units and interactive knowledge checks make learning interesting and fun!

"This course is a great starting point for anyone interested in the public service applications of digital communications technology," said Ford. The ARRL Digital Technology for Emergency Communications Course is available from the ARRL for only $49.95.

Minimum System Requirements for CD-ROM -- Microsoft Windows Vista/XP/2000/NT/98/95 or Apple OS X; 200 MHz processor; 32 MB RAM; sound card and speakers; 4-speed CD-ROM drive or higher. Requires Web browser -- Microsoft Internet Explorer 6.0, Mozilla Firefox 2.0, Apple Safari 3.0 or later versions. Some documents require Adobe Reader.

4665. Hoffmaster Trail Run - Additional Information

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-11-15 03:19:05 UTC
From: Dennis Harriss
Topic: 4665 Message: 4665

Thanks to all that agreed to help us with this run.

This information is for anyone that will be helping out with the Hoffmaster Trail Run tomorrow.

The Race starts at 10am and will be done by Noon. We will be starting at 9am due to the fact that it will take some time to get to some of the locations.

Talkin will be on the 146.820 Repeater.

For the race we will be using a portable repeater on 147.220 standard PLUS offset. 94.8 PL. This repeater will not be on the air until approximately 9AM.

We have talked with the Park Personel and they will be enforcing the Permit requirements.
Those without State Park permits and that do not want to buy a day permit should meet at the Norton Shores Fire Station on Pontaluna Rd just east of Grand Haven Rd. We have had some people volunteer to give you a ride to the park.

The entrance to the park is just west of the intersection of Pontaluna and Henry, where the road starts to bend. Once inside the park take the first road to the right and that will take you to the big parking lot where we will meet.

See you in the morning.

From: Hank Greeb
Topic: 4667 Message: 4667

This was originally published in another ham reflector.

I think it's worth pondering by us all......

Thanks to K6JEB for his prose
==========

"Argue for your limitations, and VOILA! they're yours." - Richard Bach

Regarding World Radio: it will be missed. It was always something I enjoyed reading as a young ham and I've kept my subscription current since getting back into the hobby.

That said, regarding the never ending number of times we STILL hear about the sky falling, err, I mean ham radio coming to a screeching halt (it was just as shrill in 1983 when I became a ham), don't forget the part where:

Kid finally talks parent into driving to ham a meeting (cost=gas+time which parents have so much of in this 'awesome' economy)

Kid and parent get to ham meeting, kid and parent mostly ignored as many hams at meeting are talking another language in their cliques and won't "QRS" to talk to ordinary humans. The few who do approach them haven't actually been on the air for months (years if you don't count repeaters) and often are the people no one else in the club will talk to.

When kids and parents gather the gumption to ask some pertinent questions, kid and parent get all kinds data but no way to discern the useful from the BS. Or they get very expensive answers. Mostly they get opinions or non sequitors. If they're lucky, they'll just be handed a flier with info on the next licensing class.

Meanwhile, almost every corner of the club meeting room has conversations that often contain things like "kids these days are just worthless" or "everyone is just an appliance operator nowadays" or "if it wasn't for cell phones we'd still have a thriving hobby" or "that darned Internet . . ."

Looking around the room, kid and parent get the feeling they don't belong. Especially since the feedback they're getting on so many levels is that they'll never be a 'real' ham (many reasons to choose from: no more CW test, multiple choice exams, because all gear sold these days is junk and anyone who would even buy the stuff shouldn't be allowed on the air, because computers do all the work, etc . . .).

Pleasantries are exchanged. Goodbyes are said, and even though the kid goes off to become an engineer or technician, or a rocket scientist,

their first glimpse of the hobby was filled with cranky, whining, opinionated, long-winded, selfish individuals who put out less welcoming energy than a rabid dog.

There it is. I've said it. If the shoe fits, wear it.

And then, there are the rest (most?) of you who are wonderful, helpful, generous, interesting, good listeners, fun, funny, and always looking for a way to help another person get on the air. You're the person who approaches the kid and the parent and in a friendly way, pulls them away from the cranks and the crazies and perhaps at the club meeting, more likely sometime later; you invite them to your shack and you all have a blast getting on the air.

Parent asks about the workbench where you solder all your kits and not missing a beat, you put a soldering iron in the parent's hand and have them finish up that through-hole kit (which just needed an RCA jack, so it was simple and a good primer for soldering). Meanwhile, kid is on her second contact and now the parent wants on too.

Pretty soon it's nearly midnight and finally they leave, but they're carrying a box of old magazines (including WorldRadio and those old issues of Ham Radio Horizons as well as others), a CW key and sidetone oscillator, HRO catalog so they can start getting an idea of what some gear costs (along with an explanation of how a lot of this stuff can be built for a fraction of the cost and with a hundred times more satisfaction). You lend them a soldering iron, and an easy kit (you had that unbuilt keyer kit sitting in your drawer). They're also carrying with them a list of useful URLs and most importantly, they have come away knowing they can depend on you, at least for now, to help mentor them into this wonderful hobby. And yes, I said THEM.

We used to have 'Elmers'. For me it was one helpful person who really went out of his way to help me out. As a 14 year old, I had no budget. he showed me things like putting together simple circuits from junk box parts. We didn't get stuck on trying to build the greatest Big Gun station ever. Instead we focused on working with what we had, and developing our operating technique, and most of all, a lasting love for ham radio.

He didn't accomplish this by trying to convince me that if I didn't have a ham radio license and there was a natural disaster, that I'd be somehow NOT safe. He didn't sell ham radio to me by making me feel inferior, or too young, or not experienced. He didn't give me some spiel about how a career in electronics begins with a Novice license (although it did for me). He didn't do it any other way than by demonstrating how much fun ham radio can be. When I would get frustrated because I wasn't getting through in a pile-up, he would give me useful pointers instead of a condescending statement or whining about how operators these days just suck. If I asked a question with an "obvious" answer, he wouldn't just give me the answer, but how to arrive at that answer in the future, on my own.

I would argue that we don't have a shortage of motivated, bright, curious and persistent kids. I'd say we have a shortage of good Elmers.

I worry that these days, at least here in the States, we are mass producing hams. Or more accurately, we are licensing them en masse, and we leave the _learning to operate and get on the air_ part to them, however they see fit. And sadly, I see so many single-purpose clubs/organizations who are pushing people to get their license thinking a ham license is somehow akin to a degree or certification. Those same people will get an HT and never learn about the rest of what this huge hobby has to offer.

After having lived in Germany while I was stationed there with the US Army, I don't think the issue is so much ham radio, it's ham radio in America. The clubs I took part in were thriving with people of all ages and walks of life. The interests within any one club spanned numerous facets of ham radio (it's not just EMCOMM, or QRP, or contesting, or traffic handling, or satellites, DXing, etc . . .). At least in the clubs I was in, there were almost as many women involved in the hobby as men.

I was visited this summer by a young ham from South Korea and we spoke at length about the ham club at his college in Seoul (HL0R). He told me that usually they have between forty and sixty members at each meeting. They often meet with another college club in Seoul with the callsign HL0J, so they call those meetings the "Romeo and Juliet" meetings. :) By the way, he wasn't an engineering student, but rather, an economics student.

The sky is NOT falling. But we'd still better get our act together. Let's do what we can to 'water the garden, not the weeds'. We need to think of being "V.E.'s" as also meaning VOLUNTEER ELMERS. Bring your QRP radio to the local school! They'd be glad to have you. If someone tries to convince you otherwise, tell them to step off.

Also, it's not just ham printed periodicals that are dropping off. Newspapers in general have been taking a real hit. And THAT you can 'blame' on the Internet, but the up side is where one big tree falls, many smaller ones pop up: look at all the web sites that we have within ham radio! Now instead of just QST, 73, CQ, World Radio as the main pubs, we now have dozens of web sites (and that's not even counting the myriad personal sites and specialty sites). Hey, you're not going to have a shortage of things to read, that's for sure.

All the same, I will really miss that little ham magazine on newsprint. It was great while it lasted in print. But at least we'll still have it via the web.

72/73
Jack, K6JEB

>
> Balloting for Vice Director for the Great Lakes Division remains open
> until November 21. Ballots must be received by the accounting firm
> used by ARRL by noon on this day. If you have not yet voted, please
> review the candidates and vote.
>
> If you have not received a ballot by now, I encourage you to telephone
> CEO Dave Sumner, K1ZZ at 1-860-594-0303 or e-mail him at k1zz@...
> to request a replacement ballot be sent to you by First Class mail.
>
> +++ IBM enters BPL picture +++
>
> As you may know, IBM has signed on to help International Broadband
> Electric Communications (IBEC) spread BPL throughout rural areas in
> several states. Admittedly, this came as somewhat of a surprise;
> however, it is not necessarily a bad surprise. Keep in mind that
> Amateur Radio's fight is not with BPL, per se. Our fight is against
> interference caused by poorly designed and operated forms of BPL. So
> far, the BPL systems used by IBEC do not operate on frequencies used by
> Amateur Radio.
>
> IBM's arrival on the BPL scene has emphasized one thing. This is the
> potential value of ARRL's recent court victory over FCC and its
> ill-conceived rules for BPL. These rules would have given unlicensed
> devices supremacy over licensed operations in many instances.
>
```

> As to the economic viability of BPL in truly rural America we can only
> wait and see. It would be great if IBM can come up with a
> commercially-useful system. What happens on the business side of the
> project is IBM's and IBEC's problem.
>
> +++ Your ARRL dues at work for you +++
>
> Recently, ARRL staff noticed the FCC had granted an experimental
> license to Digital Aurora Radio Technologies (DART) to operate
> experimental station WE2XRH in three ranges in the HF frequency
> spectrum. Transmissions from WE2XRH were to be as powerful as 100 kW
> and to result in an effective radiated power (ERP) of 660 kW. The
> station location would be in Delta Junction, Alaska.
>
> Testing in the HF spectrum would not necessarily cause problems for
> Amateur Radio. However, when it was realized that DART had been
> granted the right to transmit in the upper 100 kHz (7.2-7.3 kHz) of the
> ham 40M band, the planned activity took on a different tone. The 7.0
> kHz-7.3 kHz band is clearly assigned in the US to the Amateur Radio
> service as sole user. Something was terribly wrong.
>
> ARRL swung into action and petitioned FCC to correct its error by
> revoking DART's privileges on 40. Happily, FCC quickly corrected the
> error and moved the DART operations out of the band. No amateur
> frequencies are threatened by Dart's planned tests.

4672. 2M Yagi for sale

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-11-18 01:04:41 UTC
From: Jim KC8PCJ
Topic: 4672 Message: 4672

I have a 2 meter 10 element yagi for sale. $45.00. It is assembled but is on the ground. Anyone interested let me know. Can send picture if you like.

reason for selling
I currently have a 10 el cross yagi up and have no use for the one I am selling.

4673. Monthly Michigan Section News Summary

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-11-18 22:17:59 UTC
From: Tom VanderMel KB8VEE
Topic: 37 Message: 4673

Greetings Michigan Amateurs:

This month I am going to deviate a little from the usual general news format
to a more directed piece of information. We have an ARRL Section level appointment called the Official Emergency Station (OES). It is defined at: http://www.arrl.org/FandES/field/org/oes.html. Michigan currently has 13 hams appointed to this position. The appointment has been in the Field organization for many years. However, despite several attempts, it has not been successfully promoted.

To better promote the OES functions, the SEC, DECs and I met in 2005 and drafted some added guidelines for the holders of this position. Those were
then attached to the referenced guidelines. They are: "For Michigan Section
Appointees, the following provides additional detail and clarification to the
appointment requirements and qualifications:

"A Station/Club applying for the position of OES shall be capable of operations without a commercial power source for a period of 8 hours. (Applicants will need a verifiable alternative power source whether it is batteries or a generator or other form of alternative power.)

"Appointees shall be capable of transmitting and receiving on applicable bands in line with their function assignment and respective license class. As a minimum, phone operation is required with CW and Digital forms of communications being highly desirable.

"Appointees shall file monthly SAR (Station Activity Reports) with the SM and
the local EC.

"Participate yearly in the Michigan SET.

"Participate yearly in at least 2 Public Service Events

"Appointees shall maintain a normal liaison with one of the recognized NTS Traffic Nets in Michigan (Defined as participation in two nets monthly as reflected both in the SAR and station records.)"

These guides are not intended to be overly strict, but to more clearly define
the basics of the position. The functions and duties of each OES are to be set by agreement between the OES and his local EC. As an example, the OES could serve as the local net's manager, or operate the group's web page, or

be an assigned liaison to a served agency. Like all ARRL Field appointees, each OES is to file a report on a monthly basis.

There are very few OES stations who appear to be active. So here are some of the items to be considered: Is the appointment valid? Shall we consider altering the qualification requirements? Shall we give time for the local ECs to promote the position? Shall we close the position to new appointees and remove the position from service? At the meeting of Michigan ECs Saturday November 13, these options were presented and a consensus was established to establish a 6 month period and allow our ECs across the state
to promote the position with their local organizations. If this meets with success, we will keep the appointment in the organization structure. So this
is a heads up to all interested parties as well as ECs and DECs. This is an
appointment to give recognition to your team members, it need to be utilized.

Back to the news: Dan Romanchik KB6NU has served the hams of the Michigan
Section very well for the past several years as our Affiliated Club Coordinator (ACC). Dan has decided it is time to pass the torch and Scott Bicknell W1BIC has accepted the post as our new ACC. Scott's plans for our work with clubs are exciting and I look forward to his getting entrenched with the new post and bringing his plans to all of our Michigan ham clubs. Of course, Dan will remain busy with his blog, the ARROW Club in Ann Arbor, the Ann Arbor Hands on Museum plus a few other ham-related projects. Thanks
Dan, for your efforts and best wishes for continued success.

Station Activity Reports (SARs) for October, 2008: WB9JSR 680, AC8AR 350, K8LJG 227, AB8SY 210, KC8MLD 156, K8KV 151, W8RNQ 150, K8RDN 146, KD8AAD 127,
K8AMR 124, K8AE 88, KD8FNN 72, WB8RCR 57, KD8HPF 47, WD8USA 29, WA8OOH 10, KC8NTE 9, KC8BMV 6, KC8ZGB 3, AB8WF 2, KC8LXS 2, KC8RTW 2.

Public Service Honor Roll Reports (PSHRs) for October, 2008: KC8NTE 554, WB8RCR 272, WD8USA 169, AC8AR 125, K8AMR 120, W8RIT 112, WB9JSR 110, K8RDN 105, K8AE 100, K8KV 80, AB8SY 80, KJ8O 76, WF5X 70, KE6YRC 70, KD8FNN 69, K8VFZ 67, KD8HPF 51, N8NTC 50, WD8JWM 50, N8ZSA 40, W8BHF 40, KA8PEH 40, K8ABZ 40, AK8I 40, KD8CMD 40, N8LBS 40, KD8GYY 40, KE8UD 40, KE8UM 40, KB8POD
40, N3BEL 40, N8GUZ 40, AB8JR 40, N8USP 30, W8HIU 20, KC8RTW 17.

Michigan ARES/RACES programs reported 5954 operator-hours for September, an
in-kind contribution of $107,832 to the citizens of our state. The NTS team
contributed 5489 Operator-hours for a $99,406 in-kind contribution to our citizens.

October OES reports arrived from KC8NTE.

Michigan nets reporting for September (in order of traffic count): UPN, WSSBN, GLETN, QMN, MiTN, SEMTN, MIVHFTN, NLEUP, Motor City, MACS, MiARPSC, Hiawatha, NMARES, Chelsea ARC, Knet County ARPSC.

All nets are encouraged to report and this especially includes your local ARES and RACES nets. Here is the way to way everyone know your net is alive
and active. To include your net's monthly activities, contact wb8rcr@.... Complete monthly net report details are at http://www.mi-nts.org/netreport.php.

PSHRs and SARs should be filed monthly with WB8RCR. You can access a simple
reporting form at: http://www.mi-nts.org/PSHR_entry.shtml to provide your reports to John. In all cases, reporting by radiogram is encouraged -- let's
keep the NTS busy. Packet messages can be routed to wb8rcr@...
and wa8efk@... .

73,

Dale WA8EFK

Subject: Defending the Future of Amateur Radio...NOW

ARRL 2009 Spectrum Defense Fund
"QUICK" DONATE NOW: www.arrl.org/defense

November 2008
Dear ARRL Member, ARRL

Recently ARRL CEO Dave Sumner, K1ZZ asked for your support of the vital Spectrum Defense Fund at ARRL. If you have already responded, thank you. If not, here are some of the key reasons why your contribution is so important this year.

As you know, defending and enhancing amateurs' access to the radio spectrum is one of the most important missions of the ARRL.Together we have enjoyed many successes over the years. But despite exponential growth in the variety and number of radio frequency devices in the hands of consumers and businesses, we have managed to protect our bands and to add several new ones.
* Next March we will celebrate the full implementation of one of our greatest victories: the removal of high-powered international broadcasting stations from the heart of the 40-meter band–doubling the size of the worldwide 40-meter band and making this popular band more useful than it's been in 70 years!
* In 2007 the Amateur Radio Service earned its first low-frequency (LF) allocation, 135.7-137.8 kHz. However, here in the United States we must petition the FCC to implement the allocation.
* Our battle to give the Broadband of Power Lines problem the attention it deserves has been going on for six years. Last year the ARRL went to court to challenge the FCC. Guess what – we won! On April 25 the United States Court of Appeals for the District of Columbia Circuit confirmed what the ARRL has been saying for years about how the FCC was handling the BPL interference issue: FCC prejudice tainted the rulemaking process. Andin July the Court went one step further, ordering the FCC to pay the ARRL more than $6,000 toward our costs in pursuing the appeal (the check arrived in September). The award affirmed that the ARRL substantially prevailed in its appeal. The Court's decision was a tremendous victory for radio amateurs and other licensed users of the radio spectrum.
It is only through the support of thousands of ARRL members and friends like you that we have managed to come this far. Together we can celebrate all that we have accomplished on the BPL front over the past six years!

But there is more work to do. BPL is still a challenge as we face another round of technical arguments. We must leave no room for these technical issues to be settled on anything other than technical grounds. There's more work to do!

And another WRC(World Radiocommunication Conference) lies ahead in 2011 – and preparations are already underway. Planning for WRC-11 has begun and there are important issues for Amateur Radio.

ARRL staff and volunteers are hard at work on your behalf, teaming up with International Amateur Radio Union (IARU) volunteers from around the globe to build the strongest possible case for Amateur Radio at WRC-11.

Your financial commitment to spectrum defense is vital to our ability to protect your access to radio spectrum. Your contribution of $100, $50 or $25 to the 2009 Spectrum Defense Fund now will provide the financial resources required for us to be vigilant and represent you as we face new challenges.

Sincere 73,

Mary Hobart, K1MMH
Chief Development Officer
P.S. Because you care about Amateur Radio, I hope you'll make the most generous contribution you can before November 30! Remember that your donation by mail, phone on or the web at www.arrl.org/defense is tax deductible to the extent allowed by law.

P.P.S. Recently the charitable giving provision of the Pension Protection Act of 2006 was renewed for 2008 and 2009. If you are age 70-1/2 this year you may contribute up to $100,000 directly to ARRL from your IRA or Roth IRA and may benefit from tax advantages. Your contribution can be directed to the Spectrum Defense Fund. As always, check with your financial and legal advisors to determine how you might benefit from this renewed opportunity. Thank you!

The national association for AMATEUR RADIO
225 Main Street, Newington, CT06111-1494USA

4675. VHF Homebrew Antenna questions.

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-11-20 19:04:36 UTC
From: Jason B
Topic: 4674 Message: 4675

Hello All,

I have recently acquired another 2meter mobile rig and now I'm looking into putting an antenna on my roof for some home play.

Well, I have lots of questions.

I have been looking at 2 different designs, the J-pole and the Ground Plane. I've been trying to keep simple at the top of the list of requirements. I know a yagi would give a considerable amount of gain, but then the need for rotation and etc. Sticking with omni for simplicity sake. So...

The first design is the old stand-by SO-239 connector plate ground plane.
http://www.hamuniverse.com/2metergp.html

I have also been intrigued by the 300 Ohm Twin Lead J-pole design.
http://www.dxzone.com/cgi-bin/dir/jump2.cgi?ID=9293
or
http://www.dxzone.com/cgi-bin/dir/jump2.cgi?ID=5402

I've been mainly interested in the j-pole because I "think" I read somewhere that it could give about a 6db gain (over isotropic I suppose). I don't know how it will stack up versus the ground plane so any insight there would be welcomed. The problem with the j-pole is that I don't have any trees over my house so I have nothing convenient to lasso it to. I've been thinking about putting it inside a PVC pipe setup, but I'm a bit shy on the math to take into account the difference of the velocity factor of Air vs PVC pipe. Does it really matter that much?

I'm going to have to start off fresh to build one. Ideally I'd just build both and test them out. But, I don't have any junk bits laying around so i'm gonna have to visit Menard's and Radio Shack to build either one. I'd like to have a path before I start spending.

So, there it is...I'd welcome any questions, comments, or criticisms.

Thank you for any insight,

Jason Blakley
KI4VUO

I have used a j-pole for years. Have made packet contacts through the ISS
with it and a radio shack HTX242.

From: Richards
Topic: 4674 Message: 4677

Greetings Jason -- I believe, without intending to be critical in any way, you are asking a "boxers vs. briefs" kind of question. Both of these antennas are omni directional vertical radiators and should both work well.

I prefer the ground plane design because I believe it is intuitively a more obvious design and easier to implement. Both are known to work well however. Moreover, I agree with your statement the only way you will know which one works better for you, it at your location, in your circumstances, is to build both and see. Neither one is expensive, and can be made from easily obtainable, inexpensive parts. Let us know how you come out.

Just My take...

Happy trails and 73. ---- Richards - K8JHR ----

Jason,

I have a copper J pole out in my garage just sitting there if you want it you can have it. It worked fine for me. I attached a line to it and just pulled it up in a tree and could work repeaters from Holland to Ludington. I just put up a tower and picked up a Ringo Ranger 2 that is really just a Super J-pole design. Seems to work about the same as the J-pole in the tree. I've built alot of J poles and like the 1 to 1 match very broad banded, and they seem to get out as good as any other vertical antenna. If your just hitting local repeaters they have always done the job for me. Anyway I see your in Twin Lake and I am just 3 miles north so let me know if you want it.

From: Tom VanderMel KB8VEE
Topic: 4679 Message: 4679

[Reply to k8je@...]

+++ KI4LA is re-elected Vice Director +++

To ensure as many members as possible have heard the news, incumbent Vice Director, Gary Johnston, KI4LA of Edgewood, KY has been reelected to his post for another three years in a very close, 3-candidate race. In addition to Gary, the candidates were former Kentucky Section Manager and current Division Legislative Action Chairman John D. Meyers, NB4K of Butler, KY and current Michigan Affiliated Club Coordinator Dan Romanchik, KB6NU of Ann Arbor, MI. Voting in this election ended at noon, November 21. The results of the vote count as reported on the ARRL web site were:

Gary Johnston, KI4LA = 1218
Dan Romanchik = 1205
John Meyers = 1155

Upon learning of the election results, I sent the following message by e-mail to the three candidates:

"Gentlemen,

"Congratulations to Vice Director Johnston for his re-election victory in the just-completed election (the counting machine is still warm as I write this). I look forward to the assistance of Vice Director Johnston during the coming three years as together we strive to further the interests of Amateur Radio, the ARRL and the Great Lakes Division. Congratulations also to Dan and John on their strong campaigns.

"Thanks to the three of you for the deep interest you demonstrated in the ARRL electoral process. It is through spirited competition such as you displayed that ARRL is assured of competent leadership in coming years. I feel confident that each of you will continue your leadership support of the League regardless of the precise form this will take.

"73,"

Thanks to each Division member who voted in the just-completed election. It is votes of members such as you that select each of the 15 directors on the ARRL Board of Directors. The directors determine ARRL policy. Vice directors perform services to support their respective divisions as requested by their director and fill-in for the director as necessary.

Directors and vice directors serve terms three years in length. The terms begin at noon on January 1 following the election. One-third of

the 15 directors and their associated vice directors are elected each year on a staggered basis. Director and vice director elections for the Central, Hudson, New England, Northwestern and Roanoke Divisions will be held in 2009.

Section Managers including Joe Phillips, K8QOE (OH), Dale Williams, WA8EFK (MI) and Jim in contrast serve for terms of two years.

73,

Jim Weaver, K8JE, Director
ARRL Great Lakes Division

4681. Garmin GPS 12XL Personal Navigator - For Sale

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-11-25 00:34:24 UTC
From: Steve Vander Hill
Topic: 4195 Message: 4681
Attachments: 1 described; binary payloads are missing from this source WARC

Hello, I have a used Garmin 12XL GPS for sale; it comes with GPS unit, carrying case (black w/zipper), cigarette lighter plug power cable, lanyard, and owner?s manual. I am selling the unit to purchase a new dual-band HT, if you?re interested in the unit, please let me know. If you want we can arrange for you to play with it a few days to take it for a test drive. No reasonable offer will be refused, thanks.

Below is Garmin?s product description and attached is the Garmin PDF file on the unit.

Description:

When your idea of an outdoor adventure means getting way off the beaten path, you demand the most of yourself and your equipment. And when the time comes to head back to civilization, you'll enjoy the peace of mind that the Garmin? GPS 12XL has to offer.

The GPS 12XL is all about performance. It features a 12 parallel channel receiver for fast satellite aquisition and tight satellite lock ? even under tree cover. More than just an ultra-reliable receiver, the GPS 12XL is loaded with navigation information including 106 map datums and 7 grid formats, plus advanced orienteering features like user datum/UTM/and user grid formats to define your own map parameters. Store your position as one of 500 waypoints or add it to any of 20 routes. The proximity waypoint feature gives advanced warning of nearby hazards, while the position averaging function helps get the best fix possible.

Packed in a rugged case to handle tough conditions, the GPS 12XL uses an ergonomic rocker keypad for easy one-hand operation and features a user-friendly operating system to keep you on the move instead of pushing buttons. Four AA batteries provide up to 24 hours of use, and a variety of accessories can be added like an external antenna and mounting bracket. With the GPS 12XL, getting there won't be half the battle ? it'll be half the fun.

Internal Virus Database is out-of-date.

4682. Re: VHF Homebrew Antenna questions.

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-11-25 15:11:10 UTC
From: Jason B
Topic: 4674 Message: 4682

Hello again all,

I just wanted to thank everyone for the interesting conversation and ideas. It never ceases to amaze me how much knowledge there is in our ?little hobby?. I was hoping that my question would stimulate some conversation and it sure did.

Out of the suggestions that I got, I think I?m leaning toward building the twin lead j-pole, and as soon as I can pick up some twin lead and get the time. I was even offered a copper-cactus style j-pole that I think I?m going to get and put up for a more permanent solution, but that?s not going to stop me from building and playing.

Some of the suggestions I got involved just hanging an antenna from the ceiling or taping it to the wall inside the house, unfortunately I practically live in a Faraday-cage. I have an older mobile home, and my cordless phone barely works through the walls. I have a mag-mount 5/8?s wave that I was playing with inside, but I couldn?t even hit the closest repeater with 45 watts. So, I'm definitely looking at the outdoor option.

I?m wondering if anyone in the Muskegon club would be interested in setting up an antenna build night or something at the clubhouse? Maybe along the lines of a pot luck. Bring in any kind of bits or misc parts that you?d be willing to share and donate to the pile. Or, if you don?t have any parts, maybe chip in a couple bucks or something and just play antenna builder for the night. Expertise can be shared, spare parts can be shared, and maybe have a couple of antenna analyzers or something on hand to help tune them up for the folks that don?t regularly have access to such equip? I think the benefits of such an event would be worth it. Plus you?d come away with an antenna or two, if everyone donated some bits to the pile.

Sounds like you guys down in Holland are already brewing something similar. If it wasn?t for the unpredictable weather and my odd work schedule I?d come join you.

Anyway, enough QRM from my keyboard lol.

Thanx for listening and thank you to all that replied.

Thought I would give someone locally the first crack at this stuff as I'm cleaning / clearing stuff out that I'm not using: (Reply OFF LIST to jeff@...)

Icom Dstar 2820H with the GPS and data board.

All Purchased earlier this year:

Radio is 649.00

Data / GPS board is 329.99

Comes with The Programming / data cable And the software to program it from Icom.

I'm selling it all locally for 875.00

Its got maybe 2 total hours transmit time on it. Its an awesome radio, but I just don't use it enough to justify keeping it around.

Alinco DJ596 Dual Band Handheld - 100.00

Garmin Etrex Legend - 70.00

Byonics GPS2 Serial GPS with Power adapter 70.00 Used Once

Panasonic Tough book CF-28 rugged laptop

- DVD Drive

- Floppy Drive

- AC Power Supply

- Battery lasts about an hour

- Comes with Windows XP installed

- Touch Screen

Mobile "base" / lockable docking station additional 50.00 if you want it.

HP450 Mobile Printer with battery - 75.00

Itronix Go-book 250 rugged laptop Has windows XP installed. 100.00

Garmin GPS76 GPS unit 50.00

Note: EMAIL ME OFF LIST if you are interested. I will not respond to emails sent to the mail list (jeff@...). Also cash only, sorry no

checks and pick up only in Wyoming at my work cannot ship and cannot deliver due to work schedule.

Hello Everyone .. I just wanted to invite you to help out with the Jingle bell parade in Grand Haven. This is one event that offers some interesting experiences, like watching a parade at night , the lights make the floats stand out and the sound and atmosphere with the snow make this an event you don't want to miss . Top that with a BBQ chips and salad at 4:00 before we start it is one of the best events we do in Grand Haven. It gives a chance to test your skills in the cold and at night all in one evening. So dress warm and come out to join us if you can and bring your family to watch the parade this coming Sat evening ..

Thanks to all that have helped out this past year for the events in the Tri-Citys everyone of them went great and could not have happened with out you

4692. 110 VAC Generators for sale

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-12-02 18:21:38 UTC
From: Hank Greeb
Topic: 4692 Message: 4692

I have two generators for sale. Both are small camping type units, and I've used each of them for Field Day and portable contesting. They are reasonably quiet. I've used them within 10 feet of an operating position without difficulty.

One is a 950 Watt 2 cycle 110 VAC with UST label.
It runs, puts out at least 950 watts.

The other is a 1200 Watt, 2 cycle 110 VAC with ETO label.
I haven't been able to get it to run, I gave up and bought the UST unit when it was on sale.

They originally sold for $99 each, at a local auto parts place. Though they are rated differently, they seem to be identical, both outside and inside, with only minor cosmetic differences. Thus, the non working one could be used for parts in case of difficulties with the working unit.

I will sell both (yes 2 generators) for $40.

If you want only the working unit, I will sell it to you for $60.

Note - the working unit alone is priced more than the two generators. I wish to not have a non working generator on hand, it would be totally useless to me.

Please contact me via return e-mail if interested.

ALERT.

All you CW guys take a listen on 80 meters and see if you can hear the intruder. This station is strong here, S-7 to S-9 at 10:30 pm. The station is presently on 3.5285 going strong at 25 words per minute. Each message is about 6 to 7 minutes long and starts with a preamble of "NR" then a number, the time and 1986. The time seems to be off, but does increment properly. Then it goes into 5 character coded groups.

This has been going on every evening since Monday. Earlier the station was on 3.6475.

Could this be Al-Qaeda??? Or just a wayward spy numbers station???

We may never know. Listen and wonder......

Report your observations to the ARRL intruder watch, Chuck Skolaut at cskolaut@...

The Line of Sight (Message from the Editor) Column on page 4 of the Fall 2008 edition of CQ VHF magazine reviews the recent ARRL/TAPR DCC (Digital Communications Conference) in Chicago.

CQ VHF Editor, Joe Lynch, N6CL recognized TAPR President, Dave, VE3GYQ and TAPR Vice President, Steve, N7HPR for their leadership & the success of the DCC.

Kermit, W9XA & Mark, WB9QZB were recognized as local co-hosts of the ARRL/TAPR DCC coordinating local logistics & publicity.

Ron, K9IKZ was recognized for the fantastic A/V equipment deployed at the DCC as well as at the W9DXCC conference the prior weekend.

Gary Pearce, KN4AQ of Amateur Radio Video News and a former Chicago area native recorded the entire DCC and plans to make available a set of DVDs of the presentations. Although not mentioned in the column, Greg, N9CHA assisted Gary as a cameraman recording the presentations.

Due to the success of this year's DCC it is returning to Chicago again next year, 2009. A factor in this decision was the A/V eqiupment supplied by Ron.

You can learn more about CQ VHF at http://www.cq-vhf.com/

You can learn more about the DCC at http://www.tapr.org/dcc.html

Look foward to seeing many of you at the DCC in 2009.

73, Mark, WB9QZB
Chicago, IL

Ditto on both suggestions

I use :

AVG on all the time (helps keep the nasty bugs away) - FREE

Spybot search and destroy - I run this every few days and I do no run the tea timer thing - FREE

Anvir - task manager - I run this every few days also.. (got this free from giveaway of the day which is a free software thing that gives free registered software once a day for 24 hours per title)

Spyware doctor - Once again I run it every few days.. (this is one I paid for)

Windows washer - This isn't a Spybot program, but it's a good way to get rid of all those "temp" files and remove potentially harmful cookies. (bought it)

Registry Mechanic - this isn't really a Spybot program, but it is something that has saved my bacon a few times. It will make a back up of your registry for you. And it cleans out registry files that are no longer needed / or incorrect in your system. - This is a paid software.

Why is your registry important you might ask when it comes to spyware? Very simple.. Some nasty critters can crawl into it. With or without your permission. Once they are there. It's very difficult to get them out unless you know how to work in the registry. You can screw it up very easily also. (trust me.. I've done it)

I know it sounds like a lot of extra software.. But I spend so much time on my laptop that find it's nice to run it all once a week or so and just do a bit of "cleaning" . Sometimes I just set it to run before I go to bed and leave it go while I sleep so it's done in the morning.

It's also about being careful where you go and such..

Hope this helps

Just my experience and your mileage may very when it comes to it..

Jeff - N8JSN

4707. Tube Tester

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-12-10 14:13:04 UTC
From: Ross
Topic: 4707 Message: 4707

Is there someone in West Michigan that has a tube tester? I have a 1920 era Sear Radio that quit working and I suspect it is probably one of the tubes.

Or is this anyone who would be willing to do some diagnostics on it?

I saw a tube tester at the Holland swap meet in October, but I didn't pay much attention to it or the person that had it there.

From: Tom VanderMel KB8VEE
Topic: 4709 Message: 4709

To All Clubs and Hams

From ARRL Headquarters and the Michigan Section Manager.
Special attention: RADIO CLUBS

Earlier this week, the ARRL received a request from the FCC asking that ARRL members provide technical educational assistance to their communities concerning the FCC-mandated digital television (DTV) conversion scheduled for February 17, 2009.

According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, Amateur Radio clubs across the country are being asked to develop and implement plans to provide information throughout January and February about the DTV conversion in their areas. The FCC is leaving it up to the clubs to decide how to do this, as local groups understand the communities in ways that the FCC does not. Each community is a little different, Pitts said, so plans carried out by the clubs will vary from community to community. Interested groups should contact their ARRL Section Manager.

Pitts stressed that hams should not make "house calls," sell any equipment or do actual installations; the request is only to distribute technical information and FCC materials. He commented: "As we all know, some folks just never get the message until too late. Materials for presentations, education and many other activities are available online. Beginning early January, FCC staff will contact Section Managers and leaders of interested clubs and, where possible, arrange to meet to share even more information, audio, visual and printed materials, as well as and training aids, with the clubs involved this effort. We know the time is short, but your aid in this now will be appreciated."

Now to the specifics for all Michigan ham clubs:

Please review the full announcement at:
http://www.arrl.org/news/stories/2008/12/10/10499/?nc=1

Discuss the implications for your club. This can be an excellent PR opportunity. Consider your available resources and assemble a team to evaluate your participation. Should your club desire to participate, please prepare the contact information and email it to me before December 27th. wa8efk@...

I will need the following contact information only: Club Name, Club location, Club Contact person's name, call, address, telephone number, and e-mail address. This will be loaded into a spreadsheet and sent to the FCC.

The club will then be contacted by the FCC and set up to receive PR material from the Commission along with handouts and training aids. I will also emphasize, at no time is anyone to enter someone's home or install equipment. That opens the door to too much liability.

This deadline is short, action is needed immediately.

73

For those who live close enough to Holland, the HARC will be offering General Class Class's:

Greetings All:

Upgrading your license to General gives you many benefits:

-additional frequencies to use,
-additional modes to operate,
-a chance to participate in contests and paper chasing,
-more technical skills in setting up your station,
-additional skills in building equipment and antennas.

The Winter class will be led by experienced Amateur Radio Operators. We hope you will join us.

When: Monday, January 5 through the end of February.

Where: the Ken Groom Technical/Training Center 280 E. 8th Ave. Holland Amateur Radio Club

Time: 7:00 pm - 9:00 pm

Cost: Fee $20 and book $20

To reserve a seat and to order a book, call:

Ed, KF8EV 616-772-4811
or e-mail kf8ev@... <mailto:kf8ev%40arrl.net>

- Former Division Director, ARRL President W4OYI SK
- Gary Johnston, KI4LA re-elected Vice Director
- Holy and Happy Holidays
- FCC requests help from hams
- Remake of ARRL Internet facilities in progress
- Triple Play season to open
- Cal Darula, K0DXC: Special Assistant to survey youth programs
- ARRL Loyalty awards
- SW Ohio Digital Symposium - correction
- ARRL Strategic Plan - Member input requested
- Tentative schedule

+++ Former Division Director, ARRL President W4OYI SK +++

It is with great sadness that I report the death of George Wilson, III, W4OYI. George was a resident of Owensboro, KY. A long-time amateur, George previously held numerous ARRL appointments. He was elected Kentucky Section Manager, Vice Director and subsequently Director of the Great Lakes Division. He eventually became the first and only person from the Great Lakes Division to be elected ARRL President by the Board of Directors.

The George S. Wilson, III, W4OYI Award is given biannually at GLD Division conventions in honor of George's service to Amateur Radio. The award recognizes an amateur in this Division for lifetime achievement in Amateur Radio.

George served as ARRL President from January 1992 to July 1995. It was during a trip to Washington, DC on behalf of ARRL that George suffered a near-fatal stroke. A true fighter, he survived the stroke, but was left totally paralyzed on his left side. Although he was unable to maintain an active public life, he was fully alert and kept his great interest in Amateur Radio. He was active in the Owensboro Amateur Radio Club, Owensboro, KY. George died November 25.

Those who knew George knew him as an excellent person and an outstanding ham. I knew him also as a sharing and knowledgeable friend and advisor. He will be missed greatly.

George is survived by Marian, his wife of 51 years, by his children Berry and Jennifer, and by two grandchildren.

+++ Gary Johnston, KI4LA re-elected Vice Director +++

Current Great Lakes Division Vice Director Gary Johnston, KI4LA was re-elected to the Vice Director chair for another three years in a term that will begin at noon, January 1. Gary won a highly-contested race

over Michigan Official Club Coordinator Dan Romanchik, KB6NU and Division Legislative Action Chairman John Meyers, NB4K. Meyers is also former Kentucky SM. Gary edged Dan by a 13-vote margin and John by 63 votes in an election that saw 3578 votes cast. Gary served as Vice Director to former Director George Racer, WB8BGY. Gary served as director for six months after George resigned.

+++ Holy and Happy Holidays +++

Whether you celebrate Christmas or Chanukah or another holy or holiday period, the Director and Vice Director wish you and your families the very best. May you also have a very Happy New Year throughout 2009.

+++ FCC requests help from hams +++

By this time, most ARRL members have heard that the FCC asked the League to help in the coming conversion of analog TV (ATV) to digital TV (DTV). The Commission is concerned there will be problems during this switchover because a number of people may not understand how to connect the converter box or deal with some other aspect of the change. A number of such problems occurred when a trial switch to DTV occurred.

I will not discuss the rights or wrongs, if any, of the coming switchover. It is going to happen. I won't even discuss whether it was right or wrong of FCC to request help through ARRL. This, too, is a done-deal -- they've already asked. What I will discuss is watch-outs I suggest us who lending a hand may want to take to avoid the likelihood Amateur Radio ends up in hot water.

Many of us older hands remember public relations problems that occurred in the 1960s and 1970s when we tried to help with television interference (TVI) that was blamed on amateur transmissions. The answer to the TVI typically was to put a simple filter on the TV set in much the same way the DTV converter will be hooked up. A number of hams went to the length of obtaining these filters and installing them on neighbors' TV sets, trying to be good neighbors.

The problem was that a number of TV sets "went out" soon after filters were installed. Many owners of these sets blamed the hams for these failures -- never mind that the set was quite old and destined to fail soon.

A lesson from this situation soon became apparent. This is, "Though shalt keep thy hands off thy neighbor's TV set." Give them the filter, but have them install it themselves or let them have a TV technician do it.

The same could happen if we attach DTV converters to TVs. With a high percent of the sets that need converters being a few years old, we should not be surprised if a number of them fail shortly after a converter is attached.

The first rule I suggest anyone who helps out with the ATV to DTV project is to stay away from your neighbor's or a stranger's TV.

The second rule I suggest is to be certain that the instructions provided for connecting converters clearly indicates they come from the Federal Communications Commission of the US Government. These are not our instructions. We are relaying them at the request of the Federal Communications Commission of the US Government. Notice I did not merely say "the FCC." Too many people have no idea what the FCC is. In addition, many may not understand even what the Federal Communications Commission but "US Government" should be understood.

What we can take credit for is that we are taking the time and effort to help our fellow citizens. A few ways we can do this are to set up stands in shopping centers and stores where high volumes of people shop, give demos to church, civic and fraternal groups, or operate phone banks in conjunction with TV and radio stations to spread the FCC's instructions. TV stations having much to stake in the changeover and are taking the lead in publicizing "how to's" related to it, local clubs might find them willing allies in helping set up and publicizing demonstrations.

I understand the FCC will provide instructions to distribute to consumers and scripts for use over the telephone. These should clearly indicate the source of the information is the Commission. They merely ask us to volunteer time and in a way serve as parrots to distribute the information.

Provided we amateurs do not fall into the trap of being overly helpful or decide to show first hand how technically elegant we are, there should be very little chance this project will haunt us. Let the glory and problems (if any) go to the FCC.

Let us be fully satisfied to be known as good citizens who help our fellow citizens and our government when this is needed. So, feel free to put up signs stating who you are. Feel free too to talk to people about Amateur Radio and the technical advances we are making ourselves in digital and other communications, but stay away from taking credit for the service you are forwarding from the FCC.

This is my thinking about the project. If you choose to help with it, thanks. If you decide you cannot help, thanks for thinking about it.

+++ Remake of ARRL Internet facilities in progress +++

Some of you may have noticed that the Board of Directors approved a total remake of the League's Internet presence at our last meeting. As we approach the end of this year, the project is coming along nicely. Some improvements are visible. Others remain in the implementation stage and still others are in their relative infancy. We have contracted with Fathom for the project. Fathom provides web engineering for a number of major corporations, including their customer interface.

We expect the project will continue throughout 2009. Progress is going fairly well even though the last hurricane season necessitated Fathom to redirect much of its staff to repairing damage done to major clients in the stricken areas. When completed, the ARRL will be able to provide a number of new and exciting services to members and affiliated clubs.

> +++ Triple Play season to open +++

From: Tom VanderMel KB8VEE
Topic: 37 Message: 4717

Greetings Michigan Amateurs:

Most everyone has now heard about the request the FCC has made of the radio clubs across the country to assist in the Digital Television Implementation Plan. In an E-mail sent December 10, I announced the plans to Michigan hams.
The results have been quite positive and we are building the list of clubs that have registered their interest. While we all harbor some concerns and must weigh the risks involved, the public relations opportunity is significant. This is an FCC-sponsored event; they are providing the guidelines and materials. We are here for our expertise and familiarity with our local communities. No ham is to install or provide a DTV converter. Several clubs are planning community meetings to offer recommendation from the FCC and answer questions and offer guidelines. The FCC is preparing presentation materials for use at gatherings such as this. Interested clubs must register with their Section Manager wa8efk@... before the deadline, December 27. Following the registration period, the listing of volunteer clubs will be forwarded to the FCC for their follow-up. The Commission will then contact each club and learn of the club's plans and work with them the implement the community contacts. The information requested from each club is as follows: club name, area served, contact person's name, address, phone number and e-mail address. This info should be sent to wa8efk@....
More of the program details are available at http://www.arrl.org/news/stories/2008/12/10/10499/?nc=1.

The Michigan Amateur Radio Alliance held elections on December 10, 2008. The results are: President K8JX, Vice President KB8VOZ, Secretary WD8LGN and Treasurer W8MSK. The Branch County ARC recently held elections for the 2009 Officers at their November meeting. The results of that election are: President W8CSS, Sec'y/Treas KB8VWI, Board of Directors KC8RYF, WV?SS & NS8T.
The Central Michigan ARC elections results are as follows: President KD8HHK, Vice President K8RDN, Secretary KC8QZB, Treasurer WD8BCS, Directors W8ERV, KB8RAD, Under 22 Director KD8BOQ. Our congratulations go to these new leaders.

Was your club's net on the air this past month? Did your net's activity get reported in the Monthly Michigan Section NTS reports? http://www.mi-nts.org/netreport.php If your net is available to handle traffic (and most are), it should be posted here. Take advantage of this opportunity to list yourselves as available for public service and tell the world that your net is among those active in Michigan. Simply put, if you don't report it, it never happened! Well, perhaps that is a slight exaggeration, but many nets and their sponsoring organizations are not getting the PR they deserve. Here is a good method to keep your group visible.

Across our state, our Emergency Managers are providing enthusiastic support
of the ARES/RACES program. As discussed at the recent EC meeting in Lansing,
we are going to be forwarding our state's monthly ARES/RACES reporting data to all EMs beginning in 2009. This information has been reported to the state's Homeland Security/Emergency Management Division for several years. Now, our EMs will see first hand how much actual ARES/RACES volunteer time is
contributed at their local level and across the state each month. Emergency
Coordinator/RACES Radio Officers should be certain to file their monthly FSD
212 reports on time and start off 2009 with record-breaking reporting.

Winter Storm Watch... REMAINS IN EFFECT FROM THURSDAY AFTERNOON THROUGH FRIDAY AFTERNOON...

A WINTER STORM WATCH FOR THE POTENTIAL OF SIGNIFICANT SNOW AND ICE ACCUMULATIONS REMAINS IN EFFECT FROM THURSDAY AFTERNOON THROUGH FRIDAY AFTERNOON.

THE POTENTIAL EXISTS FOR 8 OR MORE INCHES OR SNOW ACROSS THE WATCH AREA THURSDAY NIGHT AND FRIDAY. IT NOW APPEARS THAT THE HIGHEST LIKELIHOOD OF FREEZING RAIN WITH ICE ACCUMULATION IN EXCESS OF ONE QUARTER INCH WILL BE ALONG AND SOUTH OF INTERSTATE 94. MOSTLY SNOW IS NOW EXPECTED NORTH OF INTERSTATE 94.

A WINTER STORM WATCH IS ISSUED WHEN SEVERE WINTER WEATHER IS POSSIBLE BUT NOT IMMINENT. AT THE TIME THERE IS A POTENTIAL FOR SIGNIFICANT SNOW AND OR ICE ACCUMULATIONS. FUTURE DRIVING AND WALKING CONDITIONS MAY BECOME HAZARDOUS...SO IT IS IMPORTANT TO MONITOR THE LATEST FORECASTS.

4723. Snow fall net. Friday 12/19/2008 6:00 PM 145.27/R

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-12-18 04:00:09 UTC

Attachments: 1 described; binary payloads are missing from this source WARC

So everyone.. Pass the word. Snowfall Net on 145.27/r Friday night 6:00 PM. Lets give the NWS a bunch of solid reports of what this storm does to the area.

If for some reason you cannot make it. Call the 800#. (which I can’t seem to find right now)

How to measure snow from http://www.crh.noaa.gov/grr/coop/howto/measuresnow/

How to Measure Snow

The following procedures were developed from previous National Weather Service procedures and input from a broad array of expertise from climatologists, snow specialists, weather observers, and data users. Some of the materials have been extracted from "The Snow Booklet" by Nolan J. Doesken and Arthur Judson, CSU, 1996).

It is essential for all observers to understand the importance of taking standard measurements in the prescribed consistent manner. Inconsistent observing and reporting methods result in incompatible data which can result in profoundly incorrect differences between stations and observers.

Each season before the first snows come: Review these instructions for measuring snow. It is easy to forget what needs to be measured, especially in those parts of the country where snow falls infrequently.

· At the beginning of each snowfall/freezing season, remove the funnel and inner measuring tube of the eight-inch manual rain gauge to expose the 8-inch diameter overflow can so that it can more accurately catch frozen precipitation.

· Put your snowboard(s) out and mark their location with a flag or some other indicator so they can be found after a new snowfall. They should be located in the vicinity of your station in an open location (not under trees, obstructions, or on the north side of structures in the shadows).

· Check your gauge to make sure there are no leaks. If there are leaks, take appropriate action.

· Once your equipment has been readied for winter you are prepared for taking snowfall measurements.

Observers should determine three values when reporting solid precipitation. They are:

1. Measure and record the snowfall (snow, ice pellets) since the previous snowfall observation

2. Determine the depth of snow on the ground at the normal observation time

3. Measure and record the water equivalent of snowfall since the previous day's observation

Measure and record the greatest amount of snowfall that has accumulated on your snowboard (wooden deck or ground if board is not available) since the previous snowfall observation. This measurement should be taken minimally once-a-day (but can be taken up to four times a day, see note below) and should reflect the greatest accumulation of new snow observed (in inches and tenths, for example, 3.9 inches) since the last snowfall observation. If you are not available to watch snow accumulation at all times of the day and night, use your best estimate, based on a measurement of snowfall at the scheduled time of observation along with knowledge of what took place during the past 24 hours. If you are not present to witness the greatest snow accumulation, input may be obtained from other people who were near the station during the snow event. If your observation is not based on a measurement, record in your remarks that the "snow amount based on estimate".

Remember, you want to report the greatest accumulation since the last observation. If snowfall occurred several times during the period, and each snowfall melted either completely or in part before the next snowfall, record the total of the greatest snowdepths of each event and enter in your remarks "snowfall melted during the OBS period". For example, three separate snow squalls affect your station during your 24 hour reporting day, say 3.0, 2.2, and 1.5 inches. The snow from each event melts off before the next accumulation and no snow is on the ground at your scheduled time of observation. The total snowfall for that reporting 24-hour day is the sum of the three separate snow squalls, 6.7 inches, even though the snow depth on your board at observation time was zero. Snow often melts as it lands. If snow continually melts as it lands, and the accumulation never reaches 0.1 inches on your measuring surface, snowfall should be recorded as a trace (T) and record in your remarks that the "snow melted as it landed".

It is essential to measure snowfall (and snow depth) in locations where the effects of blowing and drifting are minimized. Finding a good location where snow accumulates uniformly simplifies all other aspects of the observation and reduces the numerous opportunities for error. In open areas where windblown snow cannot be avoided, several measurements may often be necessary to obtain an average depth and they should not include the largest drifts. In heavily forested locations, try and find an exposed clearing in the trees. Measurements beneath trees are inaccurate since large amounts of snow can accumulate on trees and never reach the ground.

If your daily schedule permits, you may wish to make a snowfall observation every 6-hours, beginning with your regularly scheduled time of observation. This is the procedure followed by NOAA's National Weather Service Forecast Offices. Follow the same rules for a once-a-day observation, but the snow accumulation reported will be the greatest for the previous six hours instead of 24 hours. If you take your observations at this frequency, make sure that you clear your snowboard (or other measuring surface) no more than once every 6 hours. Record the frequency of observations during the day in the comments section of your report. Never sum more than four, six-hourly observations to determine your 24 hour snowfall total. If you use more than four observations, it would falsely increase snowfall totals.

Freezing rain (glaze ice) should never be reported as snowfall. This precipitation type is liquid precipitation and should be reported as such.

1. Determine the total depth of snow, ice pellets, or ice on the ground. This observation is taken once-a-day at the scheduled time of observation with a measuring stick. It is taken by measuring the total depth of snow on exposed ground at a permanently-mounted snow stake or by taking the average of several depth readings at or near the normal point of observation with a measuring stick. When using a measuring stick, make sure the stick is

pushed vertically into the snow until the bottom of the stick rests on the ground. Do not mistake an ice layer or crusted snow as "ground". The measurement should reflect the average depth of snow, ice pellets, and glaze ice on the ground at your usual measurement site (not disturbed by human activities). Measurements from rooftops, paved areas, and the like should not be made. Note: Even though the depth of hail (usually associated with spring, summer, or fall thunderstorms) at observation time is also reported in the same manner as snow depth, make sure you record in your remarks that the "accumulation on ground is from hail".

Report snow depth to the nearest whole inch, rounding up when one-half inch increments are reached (example 0.4 inches gets reported as a trace (T), 3.5 inches gets reported as 4 inches). Frequently, in hilly or mountainous terrain, you will be faced with the situation where no snow is observed on south-facing slopes while snow, possibly deep, remains in shaded or north-facing areas. Under these circumstances, you should use good judgement to visually average and then measure snow depths in exposed areas within several hundred yards surrounding the weather

station. For example, if half the exposed ground is bare and half is covered with six inches of snow, the snow depth should be entered as the average of the two readings, or three inches. When in your judgement, less than 50% of the exposed ground is covered by snow, even though the covered areas have a significant depth, the snow depth should be recorded as a trace (T). When no snow or ice is on the ground in exposed areas (snow may be present in surrounding forested or otherwise protected areas), record a "0".

When strong winds have blown the snow, take several measurements where the snow was least affected by drifting and average them. If most exposed areas are either blown free of snow while others have drifts, again try to combine visual averaging with measurements to make your estimate.

2. Measuring the water equivalent of snowfall since the previous day's observation. This measurement is taken once-a-day at your specified time of observation. Melt the contents of your gauge (by bringing it inside your home or adding a measured amount of warm water) and then pour the liquid into the funnel and smaller inner measuring tube and measure the amount to the nearest .01 inch (use NWS provided measuring stick) just as you use for measuring rainfall. Do not measure the melted precipitation directly in the large 8-inch outer cylinder. Make sure the inner measuring tube can't fall over when pouring the liquid back into it. If the melted water equivalent (including any added warm water) exceeds two inches and cannot fit into the measuring tube all at one time, then empty the full measuring tube and pour the remaining liquid from the large 8-inch outer cylinder into the emptied measuring tube. Then, add and record the water equivalent of the multiple measurements.

If you added warm water to the gauge to melt the snow, make sure you accurately measure the amount of warm water added before pouring it into the gauge. Then, when you take your liquid measurement, subtract the amount of warm water added from the total liquid measurement to get your final liquid water equivalent of the snowfall.

As winds increase, gauges collect less and less of the precipitation that actually falls. Generally speaking, the stronger the wind and the drier the snow, the less is captured in the gauge. If you notice that less snow is in the gauge than accumulated on the ground, you should first empty any existing snow from inside the 8-inch cylinder, then use it to take a snow sample, sometimes referred to as "take a core" or "cut a biscuit" from your snow board with the 8-inch overflow can. Melt the biscuit of snow, pour the liquid into the small

measuring tube to measure the water equivalent.

How to measure snow from http://www.crh.noaa.gov/grr/coop/howto/measuresnow/

How to Measure Snow

The following procedures were developed from previous National Weather Service procedures and input from a broad array of expertise from climatologists, snow specialists, weather observers, and data users. Some of the materials have been extracted from "The Snow Booklet" by Nolan J. Doesken and Arthur Judson, CSU, 1996).

It is essential for all observers to understand the importance of taking standard measurements in the prescribed consistent manner. Inconsistent observing and reporting methods result in incompatible data which can result in profoundly incorrect differences between stations and observers.

Each season before the first snows come: Review these instructions for measuring snow. It is easy to forget what needs to be measured, especially in those parts of the country where snow falls infrequently.

· At the beginning of each snowfall/freezing season, remove the funnel and inner measuring tube of the eight-inch manual rain gauge to expose the 8-inch diameter overflow can so that it can more accurately catch frozen precipitation.

· Put your snowboard(s) out and mark their location with a flag or some other indicator so they can be found after a new snowfall. They should be located in the vicinity of your station in an open location (not under trees, obstructions, or on the north side of structures in the shadows).

· Check your gauge to make sure there are no leaks. If there are leaks, take appropriate action.

· Once your equipment has been readied for winter you are prepared for taking snowfall measurements.

Observers should determine three values when reporting solid precipitation. They are:

1. Measure and record the snowfall (snow, ice pellets) since the previous snowfall observation

2. Determine the depth of snow on the ground at the normal observation time

3. Measure and record the water equivalent of snowfall since the previous day's observation

Measure and record the greatest amount of snowfall that has accumulated on your snowboard (wooden deck or ground if board is not available) since the previous snowfall observation. This measurement should be taken minimally once-a-day (but can be taken up to four times a day, see note below) and should reflect the greatest accumulation of new snow observed (in inches and tenths, for example, 3.9 inches) since the last snowfall observation. If you are not available to watch snow accumulation at all times of the day and night, use your best estimate, based on a measurement of snowfall at the scheduled time of observation along with knowledge of what took place during the past 24 hours. If you are not present to witness the greatest snow accumulation, input may be obtained from other people who were near the station during the snow event. If your observation is not based on a measurement, record in your remarks that the "snow amount based on estimate".

Remember, you want to report the greatest accumulation since the last observation. If snowfall occurred several times during the period, and each snowfall melted either completely or in part before the next snowfall, record the total of the greatest snowdepths of each event and enter in your remarks "snowfall melted during the OBS period". For example, three separate snow squalls affect your station during your 24 hour reporting day, say 3.0, 2.2, and 1.5 inches. The snow from each event melts off before the next accumulation and no snow is on the ground at your scheduled time of observation. The total snowfall for that reporting 24-hour day is the sum of the three separate snow squalls, 6.7 inches, even though the snow depth on your board at observation time was zero. Snow often melts as it lands. If snow continually melts as it lands, and the accumulation never reaches 0.1 inches on your measuring surface, snowfall should be recorded as a trace (T) and record in your remarks that the "snow melted as it landed".

It is essential to measure snowfall (and snow depth) in locations where the effects of blowing and drifting are minimized. Finding a good location where snow accumulates uniformly simplifies all other aspects of the observation and reduces the numerous opportunities for error. In open areas where windblown snow cannot be avoided, several measurements may often be necessary to obtain an average depth and they should not include the largest drifts. In heavily forested locations, try and find an exposed clearing in the trees. Measurements beneath trees are inaccurate since large amounts of snow can accumulate on trees and never reach the ground.

If your daily schedule permits, you may wish to make a snowfall observation every 6-hours, beginning with your regularly scheduled time of observation. This is the procedure followed by NOAA's National Weather Service Forecast Offices. Follow the same rules for a once-a-day observation, but the snow accumulation reported will be the greatest for the previous six hours instead of 24 hours. If you take your observations at this frequency, make sure that you clear your snowboard (or other measuring surface) no more than once every 6 hours. Record the frequency of observations during the day in the comments section of your report. Never sum more than four, six-hourly observations to determine your 24 hour snowfall total. If you use more than four observations, it would falsely increase snowfall totals.

Freezing rain (glaze ice) should never be reported as snowfall. This precipitation type is liquid precipitation and should be reported as such.

1. Determine the total depth of snow, ice pellets, or ice on the ground. This observation is taken once-a-day at the scheduled time of observation with a measuring stick. It is taken by measuring the total depth of snow on exposed ground at a permanently-mounted snow stake or by taking the average of several depth readings at or near the normal point of observation with a measuring stick. When using a measuring stick, make sure the stick is pushed vertically into the snow until the bottom of the stick rests on the ground. Do not mistake an ice layer or crusted snow as "ground". The measurement should reflect the average depth of snow, ice pellets, and glaze ice on the ground at your usual measurement site (not disturbed by human activities). Measurements from rooftops, paved areas, and the like should not be made. Note: Even though the depth of hail (usually associated with spring, summer, or fall thunderstorms) at observation time is also reported in the same manner as snow depth, make sure you record in your remarks that the "accumulation on ground is from hail".

Report snow depth to the nearest whole inch, rounding up when one-half inch increments are reached (example 0.4 inches gets reported as a trace (T), 3.5 inches gets reported as 4 inches). Frequently, in hilly or mountainous terrain, you will be faced with the situation where no snow is observed on south-facing slopes while snow, possibly deep, remains in shaded or north-facing areas. Under these circumstances, you should use good judgement to visually average and then measure snow depths in exposed areas within several hundred yards surrounding the weather

station. For example, if half the exposed ground is bare and half is covered with six inches of snow, the snow depth should be entered as the average of the two readings, or three inches. When in your judgement, less than 50% of the exposed ground is covered by snow, even though the covered areas have a significant depth, the snow depth should be recorded as a trace (T). When no snow or ice is on the ground in exposed areas (snow may be present in surrounding forested or otherwise protected areas), record a "0".

When strong winds have blown the snow, take several measurements where the snow was least affected by drifting and average them. If most exposed areas are either blown free of snow while others have drifts, again try to combine visual averaging with measurements to make your estimate.

2. Measuring the water equivalent of snowfall since the previous day's observation. This measurement is taken once-a-day at your specified time of observation. Melt the contents of your gauge (by bringing it inside your home or adding a measured amount of warm water) and then pour the liquid into the funnel and smaller inner measuring tube and measure the amount to the nearest .01 inch (use NWS provided measuring stick) just as you use for measuring rainfall. Do not measure the melted precipitation directly in the large 8-inch outer cylinder. Make sure the inner measuring tube can't fall over when pouring the liquid back into it. If the melted water equivalent (including any added warm water) exceeds two inches and cannot fit into the measuring tube all at one time, then empty the full measuring tube and pour the remaining liquid from the large 8-inch outer cylinder into the emptied measuring tube. Then, add and record the water equivalent of the multiple measurements.

If you added warm water to the gauge to melt the snow, make sure you accurately measure the amount of warm water added before pouring it into the gauge. Then, when you take your liquid measurement, subtract the amount of warm water added from the total liquid measurement to get your final liquid water equivalent of the snowfall.

As winds increase, gauges collect less and less of the precipitation that actually falls. Generally speaking, the stronger the wind and the drier the snow, the less is captured in the gauge. If you notice that less snow is in the gauge than accumulated on the ground, you should first empty any existing snow from inside the 8-inch cylinder, then use it to take a snow sample, sometimes referred to as "take a core" or "cut a biscuit" from your snow board with the 8-inch overflow can. Melt the biscuit of snow, pour the liquid into the small measuring tube to measure the water equivalent.

You may also pass the information along on the Michigan VHF Traffic Net and the QMN Net. Both have a NWS Liaison that will pick up the traffic and report it to the NWS.

To all radio amateurs

SB SPACE ARL ARLS009
ARLS009 ARISS Finalizes Plans for Silver Anniversary of Amateur Radio from Space

The Amateur Radio on the International Space Station (ARISS) team is currently celebrating the silver anniversary -- 25 years -- of Amateur Radio operations from space. According to ARISS International Chairman Frank Bauer, KA3HDO, the crew on the International Space Station (ISS) has configured the radio to support cross-band repeater operations. They have also supported some SSTV downlinks and participated in a special test of 9600 baud packet radio operations on the simplex frequency of 145.825 MHz. After December 19, Bauer said he expects the ISS ham radio system to be on the 145.825 MHz frequency supporting 1200 baud packet. If PCSAT is configured during the week, he said double hop APRS is possible.

"During the week of December 21-26, we plan to support the cross-band repeater mode with a twist," Bauer said. "Our intent is to configure the radio for 145.99 MHz uplink -- including CTCSS tone of 67.0 and 437.80 MHz down. This will be performed in low power mode. We should also note that an extra-vehicular activity (EVA) is planned for that week -- Expedition 18 Commander Mike Fincke, KE5AIT, and Flight Engineer Yury Lonchakov, RA3DT, plan to perform a spacewalk on December 22. As per standard procedure, the ISS ham radio system will be turned off for the EVA."

Bauer said that from December 28-January 3, the cross-band repeater will be reconfigured for what he called "a special experiment. This will be a test of our L-Band uplink capability, which, to date, has not been proven out. Plan for an uplink of 1269.65 MHz and a downlink on the standard frequency of 145.80 MHz, using low power," he said. "Given the substantial cable losses of the L-band system, we hope some 'big guns' are able to penetrate through, keep up with

Doppler and make the connection."

A special certificate is being developed for those who communicate with the ISS from November 30, 2008 to January 15, 2009. This certificate will be awarded to those who have had two-way communications with the ISS on voice, packet (APRS) or through the voice repeater. Those who hear the ISS from space in any of the ARISS operations modes -- voice, SSTV, school contact, voice repeater or digital - will also be eligible to receive a certificate.

To receive the certificate, Bauer said to note the ARISS mode of operation (such as SSTV, voice or school) on your QSL and whether the contact was one-way (receive only) or two-way. "You should send your self-addressed, stamped envelope to the normal ARISS QSL volunteer distributor in your area of the world," he explained. "On the outside of the QSL envelope, please include the words '25th Anniversary Certificate.' Make sure your envelope is big enough to accept an 8.5 x 11 inch certificate and includes the proper postage."

If you do not know where to send your QSL, check the ARISS Web site to find the one that serves your part of the world.

"We will be sending your certificate to the volunteer distributors in bulk after the event is over," Bauer said. "This saves workload and money. So do not expect to see it until 1-2 months after the event closes on January 15." Bauer reminded hams that due to ISS flight requirements related to spacewalks and vehicle activity, the radio onboard the ISS may be off for some portion of this schedule. School contacts and general QSO opportunities by the crew will also preempt this schedule for short periods of time. "But remember that if you hear these," he said, "you still qualify for a commemorative certificate. Enjoy the ARISS ops on ISS!"

How to Measure Snow

The following procedures were developed from previous National Weather Service procedures and input from a broad array of expertise from climatologists, snow specialists, weather observers, and data users. Some of the materials have been extracted from "The Snow Booklet" by Nolan J. Doesken and Arthur Judson, CSU, 1996).

It is essential for all observers to understand the importance of taking standard measurements in the prescribed consistent manner. Inconsistent observing and reporting methods result in incompatible data which can result in profoundly incorrect differences between stations and observers.

Each season before the first snows come: Review these instructions for measuring snow. It is easy to forget what needs to be measured, especially in those parts of the country where snow falls infrequently.

. At the beginning of each snowfall/freezing season, remove the funnel and inner measuring tube of the eight-inch manual rain gauge to expose the 8-inch diameter overflow can so that it can more accurately catch frozen precipitation.

. Put your snowboard(s) out and mark their location with a flag or some other indicator so they can be found after a new snowfall. They should be located in the vicinity of your station in an open location (not under trees, obstructions, or on the north side of structures in the shadows).

. Check your gauge to make sure there are no leaks. If there are leaks, take appropriate action.

. Once your equipment has been readied for winter you are prepared for taking snowfall measurements.

Observers should determine three values when reporting solid precipitation. They are:

1. Measure and record the snowfall (snow, ice pellets) since the previous snowfall observation

2. Determine the depth of snow on the ground at the normal observation time

3. Measure and record the water equivalent of snowfall since the previous day's observation

Measure and record the greatest amount of snowfall that has accumulated on your snowboard (wooden deck or ground if board is not available) since the previous snowfall observation. This measurement should be taken minimally once-a-day (but can be taken up to four times a day, see note below) and should reflect the greatest accumulation of new snow observed (in inches and tenths, for example, 3.9 inches) since the last snowfall observation. If you are not available to watch snow accumulation at all times of the day and night, use your best estimate, based on a measurement of snowfall at the scheduled time of observation along with knowledge of what took place during the past 24 hours. If you are not present to witness the greatest snow accumulation, input may be obtained from other people who were near the station during the snow event. If your observation is not based on a measurement, record in your remarks that the "snow amount based on estimate".

Remember, you want to report the greatest accumulation since the last observation. If snowfall occurred several times during the period, and each snowfall melted either completely or in part before the next snowfall, record the total of the greatest snow depths of each event and enter in your remarks "snowfall melted during the OBS period". For example, three separate snow squalls affect your station during your 24 hour reporting day, say 3.0, 2.2, and 1.5 inches. The snow from each event melts off before the next accumulation and no snow is on the ground at your scheduled time of observation. The total snowfall for that reporting 24-hour day is the sum of the three separate snow squalls, 6.7 inches, even though the snow depth on your board at observation time was zero. Snow often melts as it lands. If snow continually melts as it lands, and the accumulation never reaches 0.1 inches on your measuring surface, snowfall should be recorded as a trace (T) and record in your remarks that the "snow melted as it landed".

It is essential to measure snowfall (and snow depth) in locations where the effects of blowing and drifting are minimized. Finding a good location where snow accumulates uniformly simplifies all other aspects of the observation and reduces the numerous opportunities for error. In open areas where windblown snow cannot be avoided, several measurements may often be necessary to obtain an average depth and they should not include the largest drifts. In heavily forested locations, try and find an exposed clearing in the trees. Measurements beneath trees are inaccurate since large amounts of snow can accumulate on trees and never reach the ground.

If your daily schedule permits, you may wish to make a snowfall observation every 6-hours, beginning with your regularly scheduled time of observation. This is the procedure followed by NOAA's National Weather Service Forecast Offices. Follow the same rules for a once-a-day observation, but the snow accumulation reported will be the greatest for the previous six hours

instead of 24 hours. If you take your observations at this frequency, make sure that you clear your snowboard (or other measuring surface) no more than once every 6 hours. Record the frequency of observations during the day in the comments section of your report. Never sum more than four, six-hourly observations to determine your 24 hour snowfall total. If you use more than four observations, it would falsely increase snowfall totals.

Freezing rain (glaze ice) should never be reported as snowfall. This precipitation type is liquid precipitation and should be reported as such.

1. Determine the total depth of snow, ice pellets, or ice on the ground. This observation is taken once-a-day at the scheduled time of observation with a measuring stick. It is taken by measuring the total depth of snow on exposed ground at a permanently-mounted snow stake or by taking the average of several depth readings at or near the normal point of observation with a measuring stick. When using a measuring stick, make sure the stick is pushed vertically into the snow until the bottom of the stick rests on the ground. Do not mistake an ice layer or crusted snow as "ground". The measurement should reflect the average depth of snow, ice pellets, and glaze ice on the ground at your usual measurement site (not disturbed by human activities). Measurements from rooftops, paved areas, and the like should not be made. Note: Even though the depth of hail (usually associated with spring, summer, or fall thunderstorms) at observation time is also reported in the same manner as snow depth, make sure you record in your remarks that the "accumulation on ground is from hail".

Report snow depth to the nearest whole inch, rounding up when one-half inch increments are reached (example 0.4 inches gets reported as a trace (T), 3.5 inches gets reported as 4 inches). Frequently, in hilly or mountainous terrain, you will be faced with the situation where no snow is observed on south-facing slopes while snow, possibly deep, remains in shaded or north-facing areas. Under these circumstances, you should use good judgment to visually average and then measure snow depths in exposed areas within several hundred yards surrounding the weather

station. For example, if half the exposed ground is bare and half is covered with six inches of snow, the snow depth should be entered as the average of the two readings, or three inches. When in your judgment, less than 50% of the exposed ground is covered by snow, even though the covered areas have a significant depth, the snow depth should be recorded as a trace (T). When no snow or ice is on the ground in exposed areas (snow may be present in surrounding forested or otherwise protected areas), record a "0".

When strong winds have blown the snow, take several measurements where the snow was least affected by drifting and average them. If most exposed areas are either blown free of snow while others have drifts, again try to combine visual averaging with measurements to make your estimate.

2. Measuring the water equivalent of snowfall since the previous day's observation. This measurement is taken once-a-day at your specified time of observation. Melt the contents of your gauge (by bringing it inside your home or adding a measured amount of warm water) and then pour the liquid

into the funnel and smaller inner measuring tube and measure the amount to the nearest .01 inch (use NWS provided measuring stick) just as you use for measuring rainfall. Do not measure the melted precipitation directly in the large 8-inch outer cylinder. Make sure the inner measuring tube can't fall over when pouring the liquid back into it. If the melted water equivalent (including any added warm water) exceeds two inches and cannot fit into the measuring tube all at one time, then empty the full measuring tube and pour the remaining liquid from the large 8-inch outer cylinder into the emptied measuring tube. Then, add and record the water equivalent of the multiple measurements.

If you added warm water to the gauge to melt the snow, make sure you accurately measure the amount of warm water added before pouring it into the gauge. Then, when you take your liquid measurement, subtract the amount of warm water added from the total liquid measurement to get your final liquid water equivalent of the snowfall.

As winds increase, gauges collect less and less of the precipitation that actually falls. Generally speaking, the stronger the wind and the drier the snow, the less is captured in the gauge. If you notice that less snow is in the gauge than accumulated on the ground, you should first empty any existing snow from inside the 8-inch cylinder, then use it to take a snow sample, sometimes referred to as "take a core" or "cut a biscuit" from your snow board with the 8-inch overflow can. Melt the biscuit of snow, pour the liquid into the small measuring tube to measure the water equivalent.

4729. : [HARC] Winter General Class classes

Yahoo group: WestMichiganHams (2006 — 2008)

Topic: 4729 Message: 4729

The Ken Groom, ZR5AAD Technical/Training Center will be warm on Monday nights this Winter. We have enough students signed up for the General licensing class to warrant heating the house. We do have room for more if anyone wants to share the learning experience.

The class begins January 5 at a little after 7:00 pm. The fee is $20 and $20 for the book if you need it. Let me know if you wish to be added to the list and need a book. Besides heat, coffee and cookies are always available too.

Now, if you want a real learning experience just read on:

If there is enough interest, I will start a new beginner code class in January. My classes are fun and you WILL learn the code in a simple format. This
is a no-pressure class and we know how to make it fun. I have NEVER had a failure in all the years I have taught morse code, as long as the basic criteria
of the class is followed. The class will require a class meeting once a week and at least an hour a day practice.
Ask anyone who has attended my classes, and you will get a testimony of how easy it is to learn the code
There is NO charge for these classes.
If you can't learn the code in my classes - the full cost will be refunded....!!!!

Contact Chuck, W8GCW or
Ed, KF8EV at:
616-772-4811
kf8ev@... <mailto:kf8ev%40arrl.net>

Both classes will be held on Monday nights.

From: K8TB
Topic: 4730 Message: 4730

I assume many of you are just taking it easy today. I was going through some of my bookmarks, and I would like to pass on some links that are to the Air Force Space Radar. If you have never heard of this, take some time to see what good some of your tax money does. How about a transmitter on 216 megs, with over 6 Billion watts ERP? Pointed straight up. Any satellite over the earth that is not in a geo-synchronous orbit has to fly over this site. By listening to the Doppler signal the Air Force keeps track of the satellites.

Links:

http://www.k4gfg.us/navspasur/index.html

http://en.wikipedia.org/wiki/Naval_Space_Surveillance_System

http://spaceweather.com/

Real Time Audio monitoring at:
http://wowzaweb.streamguys.com/~spaceweather/

And Google up navspasur

I'm seriously thinking of buying a 220 MHz receive converter next spring and listening to this thing.

Have fun in the snow !

There's a reason they don't put that number on their website..... it's a private number that they don't want untrained people calling.

Putting it out in public like this is just plain stupid, idiotic and CB operator behavior.

Thanks,

Zachary Lassiter

Topic: 4728 Message: 4734

Tnx doc, I'll make a point to post it on the local ham forums, craigslist
and put it out on the Diesel Digit while I'm driving my Big Mack around
over the next week or 2!

Catch ya on the flip-flop

Howdy Jeff
The 800 number is 1-800-647-3836 for the NWS GRR office.
I have called in numerous reports that I have taken here and that I
have picked up on various traffic nets.

Please, as Jeff asks, send in the reports. The NWS really does need
and use them.

Best Regards,

The number I posted is off a magnet that the NWS in GRR passed out to hundreds of folks during various events and programs they have run at Skywarn, college, high school and science fairs. It is NOT a private number.

Now, refering to me as being plain stupid, idiotic and like a CB operator is uncalled for. If you have a problem with me or one of my post, you need to have the respect and decency to contact me privately. No need for this type of "flaming." It just polutes the boards and turns folks off.

Have a very Merry Christmas.

4739. Sn*wfall net

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-12-22 19:43:53 UTC
From: Hank Greeb
Topic: 4739 Message: 4739

I didn't check into the sn*wfall nets, but should I have done so?

I didn't check in because I didn't have a way of converting the depth of sn*w to the amount of water. Yes, I could have "guessed" and used "approximately 10" of sn*w equals 1" of water" but I figured that fudged data wouldn't really be of use.

The next time it was so windy that the sn*w varied from almost zero to >12" in drifts. How does one get an accurate reading if the sn*w depth is so variable? There was no place in the >2 acres of front lawn where there weren't either drifts, or it was obvious that the wind had moved much of the sn*w. And, again I didn't have a way to determine the amount of water in the sn*w.

Advice, please

4740. Snow Fall Net 6:00 PM Monday Night

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-12-22 21:20:32 UTC
From: Jeffs lists
Topic: 4740 Message: 4740

We will hold a snowfall net this week Monday, Tuesday and Wednesday. We will not send email notifications of these nets out every day though.

We will be on the Lowell Repeater 145.27/r.

At this point anytime were in a warning situation or the day after a warning situation we'll do our best to have a net going. If you're interested in helping as an NCS with this please contact Joe WD8USA on the 5.27 or email him at wd8usa@... and he can help answer NCS questions.

Would be nice if we could "rotate" the NCS duties around R5 & R6.

4741. Prelim Announcement, 2009 Michigan QSO Party, April 18

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-12-22 23:12:11 UTC
From: Hank Greeb
Topic: 4741 Message: 4741

Preliminary announcement of the 2009 Michigan QSO Party, sponsored by the Mad River Radio Club, from 1600Z,Saturday April 18 until 0400Z, Sunday, April 19. (That's Noon to midnight, Saturday, April 18, Local time) Stations may operate the full 12 hours. Phone and CW on 80/40/20/15/10 meters. Single-op, multi-op, and mobile categories. Work stations once per band and mode. MI-to-MI QSOs allowed. Work portables and mobiles again as they change county, state or province. Exchange QSO number and location (county for MI stations, state/province or "DX" for others). Suggested frequencies: CW-3545, 7045, 14045, 21045, 28045; Phone-3825, 7200, 14250, 21300, 28450. One point per phone QSO, two points per CW QSO. Count multipliers once per mode. Multipliers are MI counties for all entries, plus states & provinces for MI entries only. Final score is total QSO points times total multipliers. Mail logs no later than 30 days after the contest to: Mad River Radio Club, c/o Dave Pruett, 2727 Harris Road, Ypsilanti, MI 48198 or via e-mail to logs@.... For full rules, along with free logging software, log and summary sheets, see http://www.miqp.org

Note that the web site doesn't have the 2009 info, but it should be revised in early 2009.

Just take a reading from several different locations? where it is?less prone to drifting and average it out to a general reading- You do not have to give water equivelants- Just a storm event total and the total inches on the ground- DE WD8USA?? ...-.-

Maybe we coud even trim the un-needed text from our posts.? (those of us who receive it as a "digest" form, and especially those on dial-up would greatly appreciate it! (see below for an example).

Thanks!

4744. New Year's Eve, Feb New Hams Dinner

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-12-23 23:59:26 UTC
From: Jack Amelar
Topic: 4744 Message: 4744

If you are without New Year's Eve plans, and do NOT want a wild all night bash, consider this. The Lowell Amateur Radio Club is hosting a New Year's gathering at the shack and, if warranted, in the larger F.R.O.M. board room across the hall. Start about 8PM. We'll take up a collection to order pizzas. I'll bring the pop, and the coffee pot will be on. This is a NON-Alcohol event. We'll have the radios for Strait Key Night, a TV for the dropping of the ball, and whatever else comes to mind. Members and non-members alike all welcome.

The club shack is in the Flat River Outreach Ministries building, 11535 Fulton St E (Hwy M-21), Lowell. About 1 mile west of the Lowell Meijer. Map: http://tinyurl.com/8jrkpt

Talk-in on 145.27-(94.8Hz) or I'll have my cell 318-4551.

Note: There will not be Thursday open radio room on Christmas or New Year's Day. Next open radio room, besides New Year's Eve, is January 8, 7PM.

NEW HAMS DINNER! All Hams, keep open Saturday, February 21, for the annual New Hams Dinner. This is a traditional Get out of the Cabin gathering to have a good time, and make a special welcome to those who have acquired a ham ticket in the past year, and hams that have moved into the area. For those hams, dinner is on us. Dinner is at Fire Mountain Buffet, 3725 Alpine Ave NW (Hwy M-37), Comstock Park, MI 49321. Map: http://tinyurl.com/6ulo2d There is a back entrance off 4 Mile Rd just west of Alpine Ave. In order to avoid the Saturday night crowd, dinner will be at 2PM to 3:30, so skip lunch and come hungry. Cost is $14.50 which includes meal, drink, and gratuity.

Sponsors are:
Grand Rapids Amateur Radio Association (GRARA) http://www.w8dc.org
Lowell Amateur Radio Club (LARC) http://www.w8lrc.org
Michigan Amateur Radio Alliance (MARA) http://www.w8usa.org
Michigan DX Association (MDXA) NEW SPONSOR THIS YEAR http://www.mdxa1.org

The annual WEST MICHIGAN HAM OF THE YEAR award is presented at the New Hams Dinner to someone who has contributed to the hobby and/or public service. For more information and to nominate, visit http://www.w8usa.org/HOYIntr.htm

administrator, here's a web site to cite:

http://www.fcc.gov/pshs/services/amateur.html

It puts the FCC's imprimatur on ARES, RACES, SKYWARN, HEART, and NTS,
with links to additional URLs.

It might be a nice summary article to include in any application for a
zoning permit. I would urge any applicant to join one of those
organizations, because supporting public service is a good thing, and,
subsequently, I would consider using this web page to show that such
public service is federally recognized.

Come one, come all, to the next meeting of the Grand Rapids Amateur Radio Association, Friday, January 2, 2009. We will start gather at 6:30 p.m., and the meeting will begin at 7:00 p.m.

Besides the usual hum-drum, boring stuff of a meeting, we will have an exciting discussion of the ARRL RTTY Roundup, which starts the next day (Saturday) at 1 p.m., and runs through 7 p.m. Sunday. We plan to activate W8DC for that event!

And, even more exciting, Mike, W8DER, is bringing his state of the art FLEX-5000 rig for "show and tell." This rig is essentially a front end and final amplifier, with all the signals generated at baseband via an on board computer. For ARRL members, there's a nice writeup of the Flex-5000 in the July 2008 issue of QST.

After the meeting, there will be ham sandwiches, sodas.

Come on out for an interesting, educational, and entertaining evening!

4750. GRARA Friday, January 2, 2009, 7:00 p.m.

"ham" sandwiches...? How could you...?

Are you cannibals...? :-)

4752. ARRL RTTY (Digital Modes) Round-Up Rules, January 3 1800 Z - Sunday, January 4 2400 UTC

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-12-31 01:23:01 UTC
From: Mark Thompson
Topic: 4752 Message: 4752

http://www.arrl.org/contests/rules/2009/rtty.html
2009 ARRL RTTY Round-Up Rules
General Rules
1. Object: Amateurs worldwide contact and exchange QSO information with other amateurs using digital modes (Baudot RTTY, ASCII, AMTOR, PSK31, and Packet—attended operation only) on 80, 40, 20, 15, and 10 meter bands. Any station may work any other station. Stations may be worked once per band, regardless of mode.
2. Date and Contest Period: First full weekend of January, but never on January 1. Begins 1800 UTC Saturday, ends 2400 UTC Sunday (January 3-4, 2009).
1. 2.1. Operate no more than 24 hours.
2. 2.2. The six hours of off time must be taken in no more than two blocks.
3. Entry Categories:
1. 3.1. Single Operator:
1. 3.1.1. Low Power.
2. 3.1.2. High Power.
2. 3.2. Multioperator, Single Transmitter:
1. 3.2.1 Power.
1. 3.2.1.1. Low Power
2. 3.2.1.2. High Power
2. 3.2.2. Stations are allowed only one transmitted signal at any given time.
3. 3.2.3. Includes those single operators that use any form of spotting assistance such as from nets or packet.
4. 3.2.4. Includes those that receive assistance with logging or relief operators, etc.
5. 3.2.5. Limited to 6 band changes (maximum) in any clock hour.
6. 3.2.6. The clock hour is from zero through 59 minutes.
7. 3.2.7. Band changes are defined so that, for example, a change from 20 meters 15 meters and then back to 20 meters constitutes two band changes.
4. Exchange:
1. 4.1. United States: Signal report and State.
2. 4.2. Canada: Signal report and Province.
3. 4.3. DX: Signal report and consecutive serial number, starting with 001.
5. Scoring:
1. 5.1. QSO Points: Count one point for each completed QSO.
2. 5.2. Multipliers: Each US state (except KH6 and KL7) plus the District of Columbia (DC), Canadian provinces/territories: NB (VE1, 9), NS (VE1), QC (VE2), ON (VE3), MB (VE4), SK (VE5), AB (VE6), BC (VE7), NWT (VE8), NF (VO1), LB (VO2), NU (VYØ), YT (VY1), PEI (VY2) and each DXCC country. KH6 and KL7 count only as separate DXCC entities.
1. 5.2.1. Count only once (not once per band).
2. 5.2.2. The US and Canada do not count as DXCC entities.
6. Reporting:
1. 6.1. All entries are must be postmarked or emailed by 2359 UTC Monday, February 2, 2009.
2. 6.2. Entries in electronic format may be submitted to RTTYRU@... or submitted on 3.5” diskette to RTTY Round-Up, ARRL, 225 Main St, Newington, CT 06111.
3. 6.3. All logs that are created electronically are required to submit their electronic

log file in Cabrillo file format. A print out of an electronically generated log is not an acceptable substitute. A hand-written log that is later entered into a logging or other electronic program is considered an electronically generated log and must meet electronic file requirements.
4. 6.4. The Cabrillo entries include the header and the complete QSO list.
5. 6.5. Submissions may be made using the web applet at www.b4h.net/cabforms
6. 6.6. Hand-logged entries may be submitted to RTTY Round-Up, ARRL, 225 Main St, Newington, CT 06111.
7. Miscellaneous:
1. 7.1. Packet radio contacts made through digipeaters or gateways are not permitted.
2. 7.2. All ARRL Contest rules and forms may be downloaded from the ARRL Contest web page at: http://www.arrl.org/contests/forms or obtained from the Contest Branch by sending an SASE with 2 units of postage.
3. 7.3. For contest information contact contests@... or (860) 594-0232
8. Awards:
1. 8.1 Certificates will be awarded to:
1. 8.1.1. Top high power and low power Single Operator and Multioperator scorers in each ARRL/RAC Section.
2. 8.1.2. Top high power and low power Single Operator and Multioperator scorers in each DXCC country (other than W/VE).
2. 8.2. Plaques, if sponsored, will be awarded to the top scoring low and high power entrant in each category overall, each ARRL Division, and Canada.
1. 8.2.1. Unsponsored plaques may be purchased from the ARRL.
9. Other: See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands below 30 MHz (HF)” November 2001 QST.

4753. The times, they're a changing, and frequency also...

Yahoo group: WestMichiganHams (2006 — 2008)
Date: 2008-12-31 16:13:24 UTC
From: K8TB
Topic: 4753 Message: 4753

Interesting note:

"After seventy years of broadcasting Canada's official time,
NRC's shortwave station CHU will move the transmission frequency
for the 7335 kHz transmitter to 7850 kHz.
The change goes into effect on 01 January 2009 at 00:00 UTC.

Link at http://inms-ienm.nrc-cnrc.gc.ca/main_e.html

We also have a leap second right then..
